FIRST RESOLUTION CALLS FOR LEGAL DIVISION The first resolution submitted for the consideration of the 1977 House of Delegates calls for the establishment of a legal division within the State Society. Continuation of the malpractice crisis and incursions into the practice of medicine by government are cited as reasons for retaining the full time services of a lawyer. David N. Farber, M.D., author of the resolution, has introduced it on behalf of the Berks County Medical Society. An article on page five outlines other issues to come before the House.

PENNSYLVANIA MEDICINE, established in 1897, is published monthly as the official publication of the Pennsylvania Medical Society. All original papers and correspondence should be directed to the Managing Editor. Subscription requests and changes of address should be sent to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa 17043. A subscription is $5.00 per year. Single issues are 50 cents. Second class postage is paid at Lemoyne, Pennsylvania 17043.

B.W.CO.® HAS PUT MORE POTENCY IN THE LINE

EMPRACET® with Codeine Phosphate, 60 mg, No. 4 ©

EMPRACET® with Codeine Phosphate, 30 mg, No. 3 ©

CONTRAINDICATIONS: Hypersensitivity to acetaminophen or codeine.

WARNINGS: Drug dependence. Codeine can produce drug dependence of the morphine type and may be abused. Dependence and tolerance may develop upon repeated administration; prescribe and administer with same caution appropriate to oral narcotics. Subject to the Federal Controlled Substances Act.

Usage in ambulatory patients. Caution patients that these products may impair mental and/or physical abilities required for performance of potentially hazardous tasks such as driving a car or operating machinery.

Interaction with other CNS depressants. Patients receiving other narcotic analgesics, general anesthetics, phenothiazines, tranquilizers, sedative-hypnotics, or other CNS depressants (including alcohol) may exhibit additive CNS depression; when used together reduce dose of one or both.

Usage in Pregnancy. Safe use is not established. Should not be used in pregnant patients unless potential benefits outweigh possible hazards.

PRECAUTIONS: Head injury and increased intracranial pressure. Respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a pre-existing increase in intracranial pressure. Narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.

Acute abdominal condition. These products or other narcotics may obscure the diagnosis or clinical course of acute abdominal conditions.

Special risk patients. Administer with caution to certain patients such as elderly or debilitated patients and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, or prostatic hypertrophy or urethral stricture.

ADVERSE REACTIONS: Most frequently include lightheadedness, dizziness, sedation, nausea, and vomiting; more prominent in ambulatory than in nonambulatory patients; some may be alleviated if patient lies down; others include: euphoria, dysphoria, constipation and pruritus.

DRUG INTERACTIONS: CNS depressant effect may be additive with that of other CNS depressants. See Warnings.

For symptoms and treatment of overdosage and full prescribing information, see package insert.

Introducing EMPRACET® c̄ CODEINE #4

Each tablet contains: codeine phosphate, 60 mg (1 gr) (Warning—may be habit-forming); and acetaminophen, 300 mg.

CIII

Our new non-aspirin/ codeine analgesic for moderate to severe pain.

New peach-colored Empracet c̄ Codeine #4 offers a potent alternative for patients in whom aspirin is not indicated.

Unlike compounds containing oxycodone which afford comparable analgesia, new Empracet c̄ Codeine #4 gives you CIII prescribing convenience—up to 5 refills in 6 months at your discretion (where state law permits). And, prescribing by telephone is permissible in most states. Moreover, new Empracet c̄ Codeine #4 has less addiction potential than does oxycodone.

For those of your patients requiring a less potent analgesic, non-aspirin Empracet® c̄ Codeine #3 provides effective relief of moderate pain.

Burroughs Wellcome Co. makes codeine combination products. You make the choice.

Serious issues, deficit face 1977 House of Delegates

When the 1977 Annual Meeting of the State Society's House of Delegates is called to order at 1 p.m., Tuesday, October 25 at the Host Farm Resort Motel, Lancaster, finances will be an overriding issue.

Delegates will be faced with a money problem created in large part by the Society's aggressive but expensive position of challenging insurance company rate increase requests, exposing quackery, and seeking changes in Act 111, the state's malpractice law. All of these issues have precipitated costly court actions and deficit spending.

Preliminary figures indicate that the Society's total expenses for 1977 will be about $2,013,000. With a maximum income for 1977 of $1,765,000, the estimated deficit could exceed a quarter of a million dollars. Looking ahead to 1978, a preliminary budget put together by the Finance Committee estimates a deficit of $295,000. But if heavy expenses such as those which result from court action and rate hearings continue, the deficit for 1978 could run as high as $700,000.

The Finance Committee currently is wrestling with these budget problems. The Board of Trustees, based on the committee's recommendations, will approve a final budget at its meeting on October 24 and will make recommendations concerning the 1978 dues to the House of Delegates at its October 25-27 meeting.

Litigation

In 1975 Argonaut Insurance Co. threatened to break its contract with the State Society and leave Pennsylvania. This caused the Society to file suit to force Argonaut to live up to its agreement to write malpractice insurance for PMS members through 1979. Since that time, the Society has been involved in more than a dozen law suits.

The various suits have increased the Society's legal costs 500 percent in the last two years. In 1976 alone the Society incurred $240,000 in legal expenses. For the first seven months of 1977 legal costs are in excess of $182,000.

The Society is involved in seven suits in the ongoing malpractice insurance crisis. Additional suits have concerned such issues as the clinical laboratory regulations, the Health Service Area designation for the five-county Philadelphia area, Blue Shield's eye care program, water fluoridation in Lebanon, and an antitrust action brought by the Pennsylvania Chiropractic Society against the State Society and seven other defendants.

Rate increase hearings

The hearing on Argonaut's request for a 70 percent rate increase in malpractice insurance premiums was the second longest in Insurance Department history. On June 28, Insurance Commissioner William J. Sheppard granted Argonaut a 23.6 percent increase, the first since April 1975. Sheppard said of the Society's long and costly intervention in the matter, "It is quite clear from the record that the Pennsylvania Medical Society has been an effective and aggressive advocate of the medical profession." He praised "the very competent technical analysis provided the department" and in rejecting the 70 percent request, he cited the Society's actuaries, Woodward and Fondiller, who determined that Argonaut's reserving practices are "unique in the industry."

The Society had intervenor status at three other rate increase hearings. In the fall of 1976, Argonaut requested a 42 percent premium increase; it was denied. In the spring of 1977, the Joint Underwriting Association requested a 75.2 percent increase; the Insurance Department granted a 3.9 percent hike. This summer, the Insurance Services Office filed for an increase; hearings were held, but no decision has been announced. In the first seven months of 1977, actuarial fees alone amounted to $84,000.

Legislative priorities

Although the Legislature virtually has ignored all proposed bills in its preoccupation with the state budget, the House of Delegates will consider the Society's legislative priorities.

Among the main issues expected to receive attention is the Society's proposal to include professional corporations under Act 111 coverage. A ruling by the attorney general denied Catastrophe Loss Fund coverage to corporations. The Society seeks in S.B. 679 to spell out specifically that professional corporations be included under the Act.

Other legislative issues expected to surface are the protection of physician-patient confidentiality and the controversial laetrile bill, S.B. 901, authorizing the prescribing of laetrile by physicians, which has passed the Senate and is awaiting House of Representatives action.

Society structure

Two standing committees of the Society are recommending their dissolution to the 1977 House of Delegates. Both the Committee on Objectives and the Committee on Relationships with Allied Professionals are making the recommendation because their functions are being fulfilled by other groups within the Society.

Further recommendations on restructuring of the State Society can be expected from the Ad Hoc Committee to Study Society Structure, created by the Board of Trustees as a result of a recommendation which came out of the Board's July 1976 long range planning meeting.

Unified Membership

A major issue to be considered at the 1977 Annual Session is unified membership. If this proposed amendment is passed all current and future members of the Pennsylvania Medical Society will be required to join the American Medical Association. Currently, PMS members are only required to be a member of a county medical society.

Unified membership was discussed at the 1976 Annual Session, but a vote on it was postponed until the 1977 Session. Currently, five states have unified membership. They are Arizona, Hawaii, Illinois, Oklahoma, and Wisconsin.

PSRO funding complete; Council contract awarded

In only a little more than three years, all twelve PSRO areas in Pennsylvania have been funded by the Department of Health, Education, and Welfare (DHEW). The eight PSROs originally funded are in the conditional phase and have been performing the review function within their respective areas for some time. The remaining four PSROs recently were funded for one year to develop their organizational structures and make formal plans for assuming the review function within their areas.

Listed below are the names and addresses of the four Planning PSROs, along with the names of their chairmen and executive directors.

In addition to full PSRO implementation in Pennsylvania, DHEW has awarded a contract, effective June 27, 1977, to the Pennsylvania Professional Standards Review Council for a period of one year.

State PSR Councils, which are mandated in states with three or more PSROs, are to coordinate the activities of, and disseminate information and data among, the PSROs within the state. The Council will also assist the secretary of HEW in evaluating the performance of each PSRO and will be responsible for reviewing appeals and reconsideration from patients, practitioners, or providers. It will review and make recommendations to the Secretary of HEW relative to sanctions under the PSRO Program.

The Pennsylvania PSR Council is comprised of one representative from each Conditional PSRO; four physicians, one designated by PMS, one designated by POMA, and two designated by the Hospital Association of Pennsylvania. In addition, four persons knowledgeable in health care, selected by the Secretary of HEW (two of whom shall be recommended by the Governor) also serve on the Council.

The following officers were elected to serve until the Council's annual meeting in January of 1978: president, Sidney O. Krasnoff, M.D.; vice president, Earl A. Gabriel, D.O.; and secretary treasurer, Donald C. Brown, M.D.

Council offices will be located in the Royal Globe Building, 205 House Avenue, Camp Hill, Pennsylvania 17011. William F. S. Orner, Jr., has been named as the Council's executive director. Mr. Orner is former assistant executive director of the Pennsylvania Medical Care Foundation.

Society to review status of Blue Shield action

The State Society's Council on Medical Service and Interspecialty Committee will conduct a review on any additional procedures considered for denial of *routine* payment by Pennsylvania Blue Shield, according to action taken at its latest meeting by the Board of Trustees.

The Blue Shield Association has published a list of 28 procedures which it suggests should not be paid for routinely, but only upon documentation as to the necessity.

Pennsylvania Blue Shield has acted on five procedures, making it necessary, effective last April 1, for the physician to document the need in order to receive payment. They are: nephropexy, uterine suspension, uterine suspension with presacral sympathectomy, sympathectomy lumbar (when used to treat hypertension), and basal metabolic rate.

Blue Shield officials have agreed to hearing the advice of the Society's Council on Medical Service before acting on the recommendation of the Blue Shield Association to add other procedures to the list of those requiring documentation as to necessity in order to receive payment.

County society entrance requirements vary widely

Joining organized medicine can take as long as four months. This is the finding of a survey conducted by the Council on Professional Relations and Services. In January, the council asked each of the 60 county medical societies how long it takes a physician to join once he has completed the necessary application; 90 percent of the counties (54) responded.

While the induction of a new member can occur in as little as two weeks (as in three county societies) the average is closer to six weeks. In the case of four counties, the waiting period is longer than four months.

The accompanying chart displays some of the most common entrance requirements. It also indicates whether counties believe the process could be eliminated.

Respondents agreed that the following requirements do not contribute significantly to the screening process:

1. publishing prospective member names in the county bulletin;
2. requiring attendance at a county medical society meeting; and
3. conducting personal interviews.

In addition there were four other requirements of marginal significance:

1. inquiry to the applicant's hospital;
2. screening of the applicant by the membership committee;
3. approval from the AMA; and
4. approval by a county medical society board.

There were two requirements, however, which counties believe vital. They are: the Board of Censors' signatures on the application, and approval of the application by the membership at a regular county medical society meeting.

Despite the fact that entrance into organized medicine usually spans several months, counties were unanimous in their opinion that the delay has no negative impact on recruitment; nor do the county officers feel that the application form itself has any effect on recruiting.

The Council on Professional Relations and Services will now determine whether a model entry process should be developed.

Component County Societies

	Process Currently Conducted	*Eliminate Process*
Membership Committee considers application	31	40
Obtain approval from AMA	76	34
Names published in county bulletin	17	51
Signatures required by Board of Censors	44	14
Reading at county medical society meeting	61	31
Approval by county medical society Board	35	40
Approval by membership at regular county medical society meeting	87	9
Personal interview	19	46
Inquiry to applicant's hospital	17	43
Attendance at county medical society meeting	9	49
Inquiry to State Board of Medical Education and Licensure	28	31

Blue Shield announces fee changes

New prevailing fee program profiles were put into effect by Pennsylvania Blue Shield July 1, 1977, following Insurance Department approval. The new profiles are based on physicians' actual charges for services performed in 1976. All claims will be processed according to profiles in effect on the date the service was *rendered* to the patient.

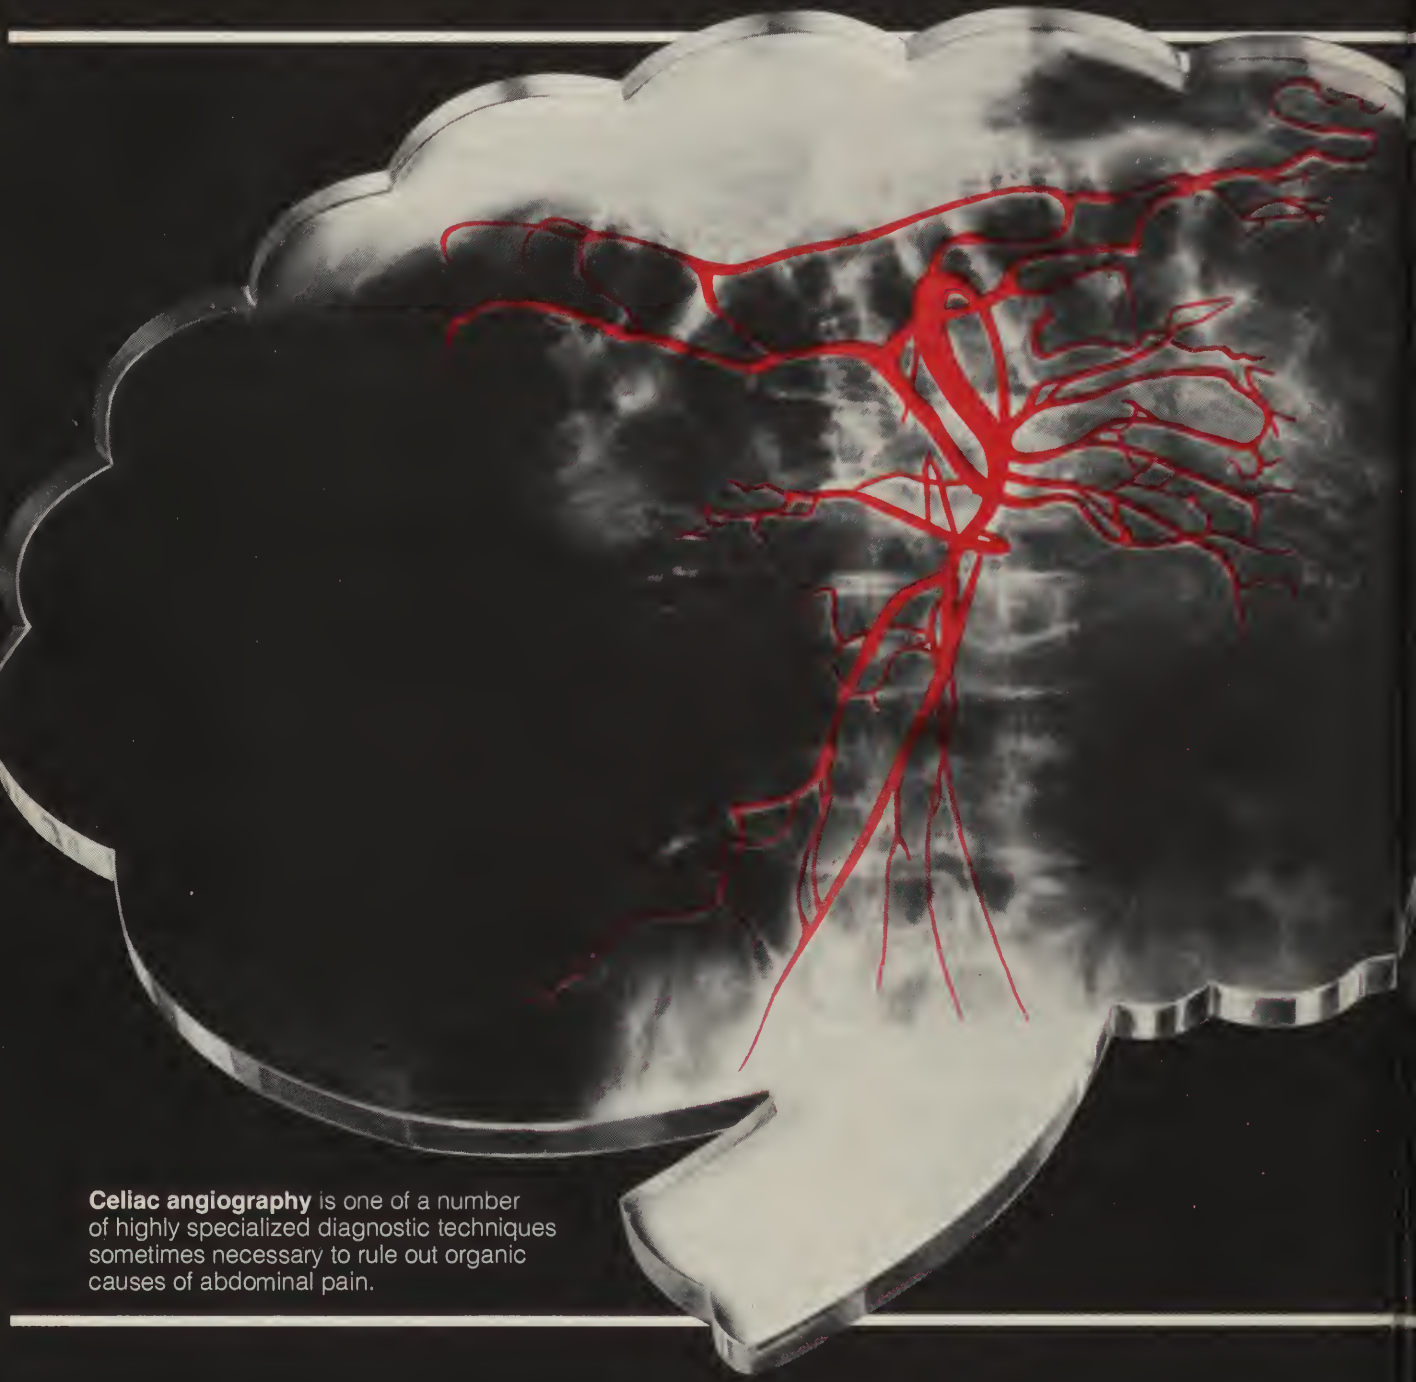
New medicare profiles also have been developed according to Social Security Administration regulations. These became effective July 5, 1977. These revised profiles are based on actual charges submitted on claims during 1976. The SSA directive states, however, that new prevailing charges (Level II) be limited to a 35.7 percent increase over medicare prevailing charges which were in effect on July 1, 1972.

Also effective July 1, 1977, are changes in Plan C. The Insurance Department has approved Plan C fee schedule allowances and an increase in income limits to $9,000 for a single subscriber and $18,000 for a family. Previously income limits were $6,000 for an individual, and $12,000 for a family. Although effective July 1, the Plan C allowances will not be published until the next revision of the Procedure Terminology Manual.

Supplemental Call to the Annual Session Pennsylvania Medical Society House of Delegates

As directed by Article IX, Section 5 of the Constitution, the Board of Trustees nominates the following members for vacancies on the Judicial Council: For the office now held by Lewis T. Buckman, M.D., who is not eligible for re-election, the Board nominates Samuel F. Cohen, M.D., Montgomery County; Sydney E. Sinclair, M.D., Lycoming County; and Cyrus B. Slease, M.D., Armstrong County.

THE LOWER G.I. TRACT: ORGANICALLY SOUND



Celiac angiography is one of a number of highly specialized diagnostic techniques sometimes necessary to rule out organic causes of abdominal pain.

...BUT OVERSENSITIVE TO EMOTIONAL STRESS

IN IRRITABLE BOWEL SYNDROME* LIBRAX PROVIDES DISTINCTIVE ADVANTAGES

- the specific antianxiety action of Librium®(chlordiazepoxide HCl)
- the potent antispasmodic action of Quarzan®(clidinium Br)

Adjunctive/Dual-Action

LIBRAX®

Each capsule contains 5 mg chlordiazepoxide HCl and 2.5 mg clidinium Br.

A clear treatment advantage for patients with irritable bowel syndrome

ROCHE

*This drug has been evaluated as possibly effective for this indication.
Please see following page for brief summary of prescribing information.

A CLEAR TREATMENT ADVANTAGE FOR PATIENTS WITH IRRITABLE BOWEL SYNDROME*

Adjunctive/Dual-Action LIBRAX®

Each capsule contains 5 mg chlordiazepoxide HCl and 2.5 mg clidinium Br.

ONLY LIBRAX PROVIDES THE SPECIFIC ANTIANXIETY ACTION OF LIBRIUM® (chlordiazepoxide HCl) PLUS THE POTENT ANTISPASMODIC ACTION OF QUARZAN® (clidinium Br)

Please consult complete prescribing information, a summary of which follows:

* **Indications:** Based on a review of this drug by the National Academy of Sciences—National Research Council and/or other information, FDA has classified the indications as follows:
"Possibly" effective: as adjunctive therapy in the treatment of peptic ulcer and in the treatment of the irritable bowel syndrome (irritable colon, spastic colon, mucous colitis) and acute enterocolitis.
Final classification of the less-than-effective indications requires further investigation.

Contraindications: Patients with glaucoma; prostatic hypertrophy and benign bladder neck obstruction; known hypersensitivity to chlordiazepoxide hydrochloride and/or clidinium bromide.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering Librium® (chlordiazepoxide hydrochloride) to known addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

As with all anticholinergic drugs, an inhibiting effect on lactation may occur.

Precautions: In elderly and debilitated, limit dosage to smallest effective amount to preclude development of ataxia, oversedation or confusion (not more than two capsules per day initially; increase gradually as needed and tolerated). Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider pharmacologic effects of agents, particularly potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: No side effects or manifestations not seen with either compound alone have been reported with Librax. When chlordiazepoxide hydrochloride is used alone, drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are avoidable in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally with chlordiazepoxide hydrochloride, making periodic blood counts and liver function tests advisable during protracted therapy. Adverse effects reported with Librax are typical of anticholinergic agents, *i.e.*, dryness of the mouth, blurring of vision, urinary hesitancy and constipation. Constipation has occurred most often when Librax therapy is combined with other spasmolytics and/or low residue diets.

Dosage: Individualize for maximum beneficial effects. Usual maintenance dose is 1 or 2 capsules, 3 or 4 times a day, before meals and at bedtime. Geriatric patients—see Precautions.

How Supplied: Librax is available in green capsules, each containing 5 mg chlordiazepoxide hydrochloride (Librium®) and 2.5 mg clidinium bromide (Quarzan®)—bottles of 100 and 500; Tel-E-Dose® packages of 100; Prescription Paks of 50, available singly and in trays of 10.

CME

AMA brings CME to Hershey

AMA Regional CME Program — Nov. 18-19, 1977

AMA has greatly expanded its continuing medical education programs, an important service to member physicians. A regional CME meeting is scheduled at Hershey Motor Lodge, West Chocolate Ave., Hershey, PA 61703. Non-AMA members are welcome.

This meeting has been developed by the AMA in cooperation with Hahnemann Medical School, Jefferson Medical College, Medical College of Pennsylvania, New Jersey Medical School, and the medical schools of Howard University, Penn State University, Rutgers University, Temple University, University of Pennsylvania, University of Pittsburgh, and the Pennsylvania Medical Society.

AMA BRINGS CME TO YOU . . .

- A clinically directed syllabus for each course.
- Individual attention to questions—class sizes are limited.
- All courses approved by the AMA Council on Continuing Physician Education for Category 1 credit towards an AMA Physician's Recognition Award.

CME Courses Offered at Hershey Meeting

FRIDAY, NOVEMBER 18, 1977 (Each 6 Hours)

P-1. Proper Selection of Antibiotics
P-2. Dermatology for Nondermatologists
P-3. Medical Ethics: Euthanasia & the Doctor-Patient Relationship
P-4. Neonatology
P-5. Financial Management Colloquium (This colloquium **only** is CME Category 2.)

FRIDAY & SATURDAY, NOVEMBER 18-19, 1977 (16 Hours)

P-6. Basic & Advanced Life Support (Cardiopulmonary Resuscitation—CPR)

SATURDAY, NOVEMBER 19, 1977 (Each 6 Hours)

P-7. Alternate Lifestyle
P-8. Drugs of the Decade
P-9. Ambulatory Care of Pulmonary Disease
P-10. Current Advances in the Treatment & Research of Cancer
P-11. Acid-Base, Fluid, & Electrolyte Balance
P-12. Auscultation

Methyltestosterone U.S.P. – 5, 10, 25 mg.

New Double-Blind Study ANDROID-25 *vs.* Placebo*

* **WRITE FOR REPRINT:** R. B. Greenblatt, M.D.; R. Witherington, M.D.; I. B. Sipahioglu, M.D.: Hormones for Improved Sexuality in the Male and Female Climacteric. *Drug Therapy,* Sept. 1976.

Is there a true aphrodisiac? How effective are androgens in the management of the male climacteric and male impotence? Article discusses the psychophysiological and hormonal changes in the elderly male and female and therapeutic considerations. The effectiveness of methyltestosterone in the management of male impotence was confirmed by a cross-over, double-blind study using a placebo and Android-25 (methyltestosterone 25 mg.), on 20 males, 50 years of age or older who complained of secondary impotence. Patients received a series of placebo then Android-25, or Android-25 then placebo as follows: 1 tablet/30 days; 2 tablets/30 days; 3 tablets/30 days. Sexual response was evaluated: 0 = no change; + = 25% improvement; + + = 50% improvement; + + + = 75% improvement. Placebo effectiveness was + or + + in 12.7% of trials. Android-25 elicited a +, + + or + + + response in 47.2% of trials. There was often a dose related response not observed with the placebo. This effect was not observed in younger patients (age 28-45 years).

DESCRIPTION: Methyltestosterone is 17β-Hydroxy-17-Methylandrost-4-en-3-one. **ACTIONS:** Methyltestosterone is an oil soluble androgenic hormone. **INDICATIONS:** In the male: 1. Eunuchoidism and eunichism. 2. Male climacteric symptoms when these are secondary to androgen deficiency. 3. Impotence due to androgenic deficiency. 4. Post-puberal cryptochidism with evidence of hypogonadism. Cholestatic hepatitis with jaundice and altered liver function tests, such as increased BSP retention, and rises in SGOT levels, have been reported after Methyltestosterone. These changes appear to be related to dosage of the drug. Therefore, in the presence of any changes in liver function tests, drug should be discontinued. **PRECAUTIONS:** Prolonged dosage of androgen may result in sodium and fluid retention. This may present a problem, especially in patients with compromised cardiac reserve or renal disease. In treating males for symptoms of climacteric, avoid stimulation to the point of increasing the nervous, mental, and physical activities beyond the patient's cardiovascular capacity. **CONTRAINDICATIONS:** Contraindicated in persons with known or suspected carcinoma of the prostate and in carcinoma of the male breast. Contraindicated in the presence of severe liver damage. **WARNINGS:** If priapism or other signs of excessive sexual stimulation develop, discontinue therapy. In the male, prolonged administration or excessive dosage may cause inhibition of testicular function, with resultant oligospermia and decrease in ejaculatory volume. Use cautiously in young boys to avoid premature epiphyseal closure or precocious sexual development. Hypersensitivity and gynecomastia may occur rarely. PBI may be decreased in patients taking androgens. Hypercalcemia may occur, particularly during therapy for metastatic breast carcinoma. If this occurs, the drug should be discontinued. **ADVERSE REACTIONS:** Cholestatic jaundice • Oligospermia and decreased ejaculatory volume • Hypercalcemia particularly in patients with metastatic breast carcinoma. This usually indicates progression of bone metastases • Sodium and water retention • Priapism • Virilization in female patients • Hypersensitivity and gynecomastia. **DOSAGE AND ADMINISTRATION:** Dosage must be strictly individualized, as patients vary widely in requirements. Daily requirements are best administered in divided doses. The following is suggested as an average daily dosage guide. **In the male:** Eunuchoidism and eunuchism, 10 to 40 mg.; Male climacteric symptoms and impotence due to androgen deficiency, 10 to 40 mg.; Postpuberal cryptorchism, 30 mg. **REFERENCE: Robert B. Greenblatt, M.D.,** and **D. H. Perez, M.D.:** "The Menopausal Syndrome," *Problems of Libido in the Elderly,* pp. 95-101, Medcom Press, N.Y., 1974. HOW SUPPLIED: 5, 10, 25 mg. in bottles of 60, 250. Rx only.

Generic substitution regulations finalized

ARTHUR H. HAYES, M.D.
Hershey

Implementation of the generic substitution act, Act 259 of 1976, goes into the second phase with publication of the final regulations. PMS has been as active in communicating with the Health Department in the development of those regulations as it was in communicating with the legislature when the bill was being formed. Final determination on all regulations on this act are the responsibility of the Secretary of Health.

One of the key provisions of the regulations affecting physicians describes the format for prescription blanks. The regulations mandate that two separate lines be placed side by side on the blank, the line on the left over the words "Do Not Substitute" and the line on the right over the words "Substitution Permissible." Physicians may continue to have other preprinted information as desired, such as the number of refills allowed. Although a prescription for a controlled substance must bear the Federal Drug Enforcement Administration registration number, that number may *not* be preprinted on the blank.

Prescription blanks may include the appropriate, pre-printed phrases and lines. Physicians may use existing blanks by having the words and lines typed or rubber-stamped on them.

Oral prescriptions are structured as called for in the act. Unless a physician forbids substitution, a pharmacist will assume that substitution is permissible. In making the regulation, the health department notes, "Of course, the pharmacist is not prohibited from asking the prescriber for clarification." The burden to specify substitution or not still remains with the physician in oral prescriptions.

In all cases, the pharmacist is required to record substitutions. When substitution is made, the pharmacist is to record the generic equivalent drug name as well as the manufacturer and distributor. This information should be noted on the original prescription he retains. A physician who wants to know for his own records when substitution was permitted should make a notation in his patients' medical records. There is no provision in the regulations requiring the pharmacist to notify the physician of the chosen substitute. Since the labeling on the prescription must contain drug name and manufacturer, the physician may ask the patient to bring prescription containers to his next office visit. He may indicate on the prescription if he does not want the drug name to appear on the label. The pharmacist is then required by regulations to use the recognized national drug code number (if available).

When a generic drug has been substituted with the physician's permission and then is refilled, the pharmacist must refill with the same generic drug. That is, the substitution may take place only once. If the pharmacist no longer has the generic originally substituted in filling the prescription, he cannot refill. A new prescription or prior approval from the physician is necessary before a "second" substitution of a generic may take place.

The physician who dispenses drugs must abide by all the labeling requirements applicable to a pharmacist. His envelopes or labels for dispensing must include his name and address, the date the drug is dispensed, the name of the patient, and directions for using the drug.

Dr. Hayes is chairman of the State Society's Commission on Therapeutics, which is acting in an advisory capacity to the State Department of Health's Drug Device and Cosmetic Board.

Dr. Levit directs national board

Edithe J. Levit, M.D., Philadelphia, assumed the position as president and director of the National Board of Medical Examiners August 10. She is the first woman in the board's 60 year history to hold the office.

Dr. Levit received her bachelor's degree from Bucknell University and her medical degree from the Medical College of Pennsylvania. She joined the staff of the board in 1961 from her position as director of medical education at Philadelphia General Hospital. Since 1961, serving as assistant director, associate director, secretary, and vice president, Dr. Levit has played a prominent role in the board's growth.

DR. LEVIT

State's residents to meet at Annual Session

On October 25 a "historic first" will occur when resident physicians in Pennsylvania hold their first statewide meeting. The organizational meeting of residents will be held at the Host Farm Resort Motel in Lancaster under the sponsorship of the Pennsylvania Medical Society. From that meeting is expected to come a resolution to the House of Delegates calling for official launching of a Resident Physicians Section (RPS) in the Pennsylvania Medical Society.

DR. JONAS

DR. DAVIDSON

DR. TOKARZ

A. Patrick Jonas, M.D., a second year family practice resident at the Hershey Medical Center, said the functions of a resident section would be to "help residents communicate among themselves, with organized medicine, and vice versa." Dr. Jonas continued, "Communication needs to be expanded so that residents can learn, for example, what is available in Pennsylvania for them as future practitioners. Shall I practice here or not? PMS holds the answer to a lot of these questions. Through this kind of organization we can communicate."

Steven J. Davidson, M.D., a resident in emergency medicine at the Medical College of Pennsylvania in Philadelphia, and a member of the steering committee, said, "Residents have a number of problems peculiar to their training status. They provide a considerable amount of care in their hospitals but continue to have the role of students at the same time. As a result, these physician-students are frequently abused. In that sense I think residents need to develop an organization among themselves. Because residents are not going to be residents forever, I prefer that organization occur through the county and state medical societies and the AMA."

In San Francisco in June, J. Patrick Tokarz, M.D., a resident in family practice at the Hershey Medical Center, was elected chairman of the AMA Resident Physicians Section. The AMA's aggressive pursuit of resident physicians has offered a middle-of-the-road avenue for young physicians disenchanted with the radical movements of ten years ago. The State Society, whose resident membership is 500 and growing every year, quickly responded to the AMA initiative.

Society President William J. Kelly, M.D., appointed a steering committee of three residents to lay the groundwork for an RPS. Members of that committee are Drs. Tokarz, Jonas, and Davidson. The steering committee, working in conjunction with the Council on Professional Relations and Services, will sponsor the unique statewide meeting of residents now scheduled for the morning of October 25 at the Host Farm, Lancaster.

According to Dr. Davidson, already a member of the executive council of the Emergency Medicine Residents Association, the resident section will also tackle such issues as house staff contracts. "It is important that the resident, who is making life and death decisions, himself be fairly treated and be in a condition to make those decisions. I think there is the feeling in many of the residency programs that working 110 hours a week does not necessarily make for a better training experience. Certainly the kinds of things that are usually worked out in contracts—wages, hours and conditions—are part of the reason for residents to organize," Dr. Davidson said.

At the national level Dr. Tokarz said the AMA Resident Physicians Section is anxious to impress Congress with the fact that residents are the physicians of tomorrow and that they want a voice in decisions on national health policy. To emphasize this Dr. Tokarz and other RPS leaders will meet soon in Washington with officials of HEW and members of the Congress.

Regarding the statewide residents' meeting, Dr. Jonas said, "We would like to see a resolution supporting the establishment of a Resident Physicians Section passed by the House of Delegates. We would also like to see the State Society commit itself to sending a certain number of resident delegates to meetings of the AMA House of Delegates. We hope that as a result of this meeting many residents will want to participate in the activities of this resident section and PMS."

Eastern Pennsylvania Chapter of the American College of Surgeons
Twenty-Sixth Annual Meeting*
Wednesday, November 9, 1977 Holiday Inn East-Bethlehem, Pa.

Schedule of Events

Registration—8:15-9 a.m.

Morning Session
General Surgery Program
Marfil Room

Presiding Officer
Harry G. Light, M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: Harry Goldsmith, M.D., Samuel Gross Professor of Surgery, Thomas Jefferson University Medical School, Philadelphia, PA., SUBJECT: LIVER SURGERY.

9:45 a.m.: Robert Freeark, M.D., Professor and Chairman, Department of Surgery, Stritch School of Medicine of Loyola University of Chicago, Maywood, IL., SUBJECT: DIVERTICULAR DISEASE OF THE COLON

10:30 a.m.: Francis D. Moore, M.D., Elliott Carr Cutler Professor of Surgery, Harvard Medical School, Boston, MA., SUBJECT: THE TREATMENT OF BREAST CANCER IN VARIOUS STAGES OF DEVELOPMENT.

11:15 a.m.: Harry H. LeVeen, M.D., Chief of Surgical Service, Professor of Surgery, State University of New York, Veterans Administration Hospital, Brooklyn, NY., SUBJECT: TREATMENT OF TUMORS WITH RADIOFREQUENCY - THERMOGRAPHY.

12:00 p.m.: Cocktails MARFIL ROOM.
12:30 p.m.: Luncheon BALLROOM.
Presiding Officer: Harry G. Light, M.D., F.A.C.S., President, Eastern Pennsylvania Chapter of the American College of Surgeons SPEAKER: Francis D. Moore, M.D., SUBJECT: "HOW FAST DO WE WANT SURGICAL MANPOWER TO GROW?"

Afternoon Session
Presiding Officer
Stuart H. Irons, M.D., F.A.C.S.
Wilkes-Barre, PA

2:00 p.m.: Resident's Paper.

2:30 p.m.: PANEL DISCUSSION MODERATOR: Charles K. Zug, III, M.D., F.A.C.S., Bethlehem, PA.

PANELISTS: Robert Freeark, M.D., Harry Goldsmith, M.D., Harry H. LeVeen, M.D., Francis D. Moore, M.D., SUBJECT: SURGICAL COMPLICATIONS—THEIR AVOIDANCE OR TREATMENT.

4:00 p.m.: CHAPTER MEETING.

Morning Session
Gynecologic and Urologic Program
Sala De Oro Room

Presiding Officer
Frank S. Flor, M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: Earl F. Greenwald, M.D., Associate Professor of Obstetrics/Gynecology, Director of Section of Gynecological Oncology, Temple University School of Medicine, Philadelphia, PA., SUBJECT: CARCINOMA OF THE CERVIX.

10:00 a.m.: Equinn W. Munnell, M.D., Professor of Clinical Gynecology & Obstetrics, College of Physicians and Surgeons, Columbia University, New York, Attending Obstetrician & Gynecologist, Presbyterian Hospital, New York, NY., SUBJECT: CARCINOMA OF THE ENDOMETRIUM.

11:00 a.m.: Joseph N. Corriere, Jr., M.D., Professor & Director, Division of Urology, University of Texas, Houston, TX., SUBJECT: UROLOGICAL COMPLICATIONS FOLLOWING GYNECOLOGICAL SURGERY.

12:00 p.m.: Cocktails MARFIL ROOM.
12:30 p.m.: Luncheon BALLROOM.

Afternoon Session

2:00 p.m.: Panel Discussion and Question-and-Answer Session with Questions Submitted by Audience.

Morning Session
Trauma Program
Darsena Room

Presiding Officer
Charles F. Snyder, Jr., M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: William P. Graham, M.D., Chief, Plastic Surgery, Hershey Medical School, Hershey, PA., SUBJECT: SOFT TISSUE INJURIES.

9:45 a.m.: Carl T. Brighton, M.D., P.H.D., Professor & Chairman, Department of Orthopedics, University of Pennsylvania. SUBJECT: "THE TREATMENT FRACTURE NON-UNION WITH ELECTRICITY".

10:30 a.m.: Peter Janetta, M.D., Professor & Chairman, Department of Neurosurgery, University of Pittsburgh School of Medicine, Pittsburgh, PA., SUBJECT: THE CEREBELLOPONTINE ANGLE AS PANOORA'S BOX: THE CRANIAL NERVE DYSFUNCTION SYNDROMES.

11:15 a.m.: Felicien Steichen, M.D., President PA. Division, American Trauma Society, University of Pittsburgh School of Medicine, Pittsburgh, PA., SUBJECT: PRESENT AND FUTURE TRENDS IN THE MANAGEMENT OF TRAUMA.

12:00 p.m.: Cocktails MARFIL ROOM.
12:30 p.m.: Luncheon BALLROOM.

Afternoon Session

2:00 p.m.: Felicien Steichen, M.D., PRESENTATION OF A CASE OF MULTI-SYSTEM TRAUMA.

PANEL DISCUSSION OF MANAGEMENT: Carl T. Brighton, M.D., William P. Graham, M.D., Peter Janetta, M.D., John Ryan, M.D.

4:00 p.m.: CHAPTER MEETING.

*** in association with the Lehigh Valley Obstetrical Society and the American Trauma Society, Pennsylvania Division.**

As an organization accredited for continuing medical education, the Pennsylvania Medical Society certifies that this continuing medical education offering meets the criteria for hour for hour credit in Category I of the Physician's Recognition Award of the American Medical Association, provided it is used and completed as designed.

Part Ownership In One Of The Nation's Fastest Growing Physician Supply Houses

When you join the Pennsylvania Medical Cooperative you're not just another customer . . . you're one of the owners. And that's just the way we treat you.

As an owner you'll be able to:

* Purchase *all* of your medical supplies at consistently lower prices. We buy direct and sell to you without the middleman's profits.
* Receive your supplies promptly. We process and ship your order within 24 hours.
* Choose from monthly specials at even lower prices. When we get a good deal we pass it right on to you.
* Put some extra money in your pocket. We're not out to make a profit, we're in business only to save you money. The money you save on supplies (the amount will surprise you) is more profit for your practice.

Memberships in the Co-op are now available for a one-time fee of only $200. Chances are you'll save that much in the first year. Take a moment now to fill out the membership application below. Join the more than 2,000 physicians who now enjoy Co-op savings.

Pennsylvania MEDICAL Cooperative

THE PENNSYLVANIA MEDICAL COOPERATIVE IT'S TIME YOU MADE IT YOUR BUSINESS

MEMBERSHIP APPLICATION

Pennsylvania Medical Cooperative
3617 Simpson Ferry Road
Camp Hill, PA 17011

☐ I have heard enough. I am a member of the Pennsylvania Medical Society, so please enroll me as a member of the Pennsylvania Medical Cooperative. Enclosed you will find a check in the amount of $200 to cover the membership requirement. It is my understanding that this is a life-time subscription entitling me to a vote in the affairs of the Cooperative and giving me the right to purchase all medical supplies offered by the Cooperative.

☐ I am impressed by what I have read, but I would like to know more. Please send me more information and a membership application on the Co-op.

(Please make checks payable to the Pennsylvania Medical Cooperative.)

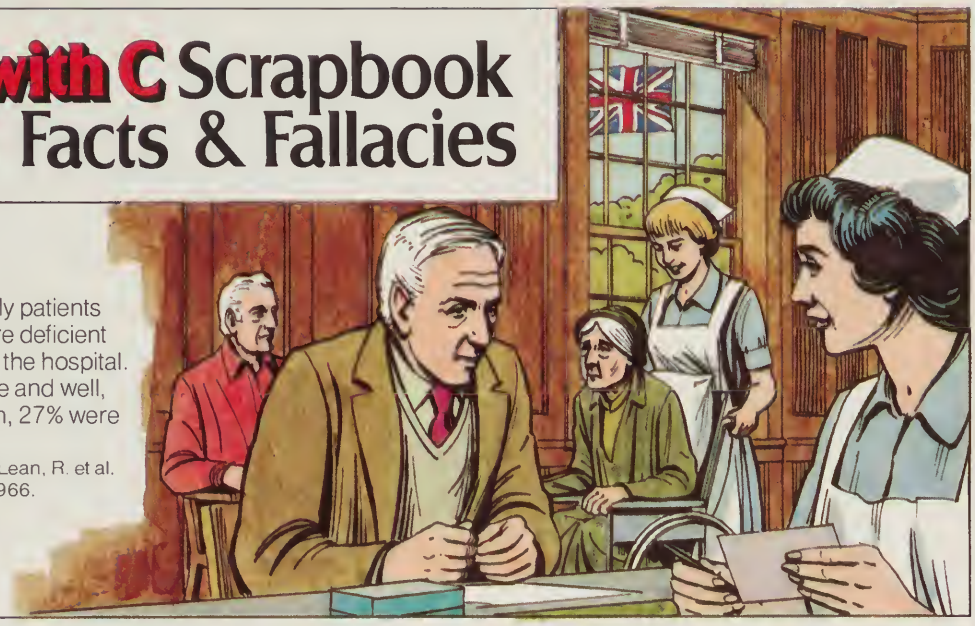
The ALLBEE® with C Scrapbook of Vitamin Facts & Fallacies



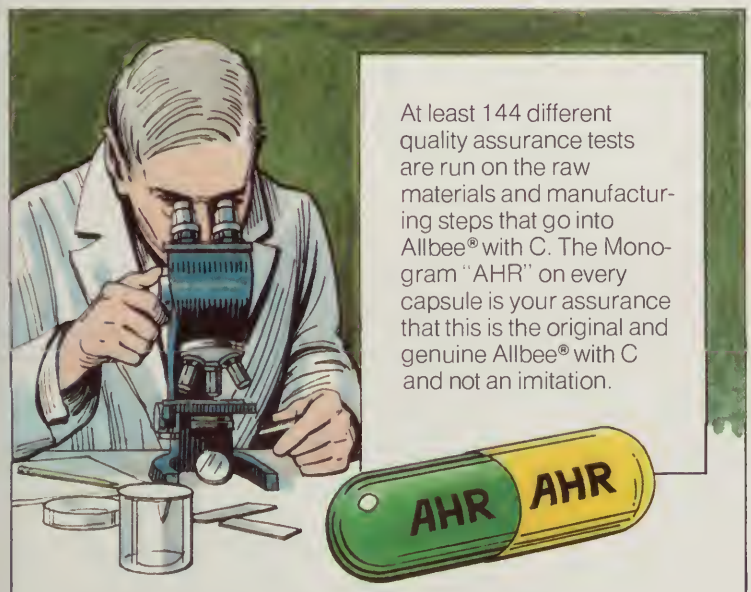
A study conducted among elderly patients in England showed that 41% were deficient in ascorbic acid on admission to the hospital. Even among those living at home and well, or not sufficiently ill for admission, 27% were deficient in ascorbic acid.

Griffiths, L.L., Brocklehurst, J.C., MacLean, R. et al. *Diet in Old Age*, Brit. Med. J., 1:739, 1966.

The loss of riboflavin in milk in a glass container exposed to sunlight for two hours may be as high as 95%.

Quick freezing of vegetables is accompanied by very little ascorbic acid loss. But blanching, washing, and prolonged standing at room temperatures results in considerable reduction in Vitamin C content.

In World War I a unit of 100 beds per division in the Russian army was set aside for scurvy patients. Yet, only 20 cases of scurvy were reported among all American troops in 1917-18.



At least 144 different quality assurance tests are run on the raw materials and manufacturing steps that go into Allbee® with C. The Monogram "AHR" on every capsule is your assurance that this is the original and genuine Allbee® with C and not an imitation.

Available on your prescription or recommendation

Home health care—another way to reduce costs?

DEBORAH L. RUSSELL

Editorial Assistant

Demands by the American people and their Congress for control over the runaway cost of health care has caused physicians, hospitals, and governmental agencies to search for ways to cut costs and increase efficiency of health care facilities.

In July 1975 the Pennsylvania Department of Health's Advisory Council for Comprehensive Health Planning created a Home Health Care Committee to develop standards and guidelines for comprehensive home care services in the state. The committee, including representatives of the Pennsylvania Assembly of Home Health Agencies and receiving consultation from consumers, the Pennsylvania Medical Society, Community Services of Pennsylvania, the Department of Public Welfare's Office of Aging, and the Department of Health's medicare certification and professional consultation staff, drew up a "Plan for Comprehensive Home Care for Pennsylvania" in order to focus on the state's needs.

A Home Care Information Consortium, sponsored by Community Services of Pennsylvania and made up of representatives of state- and countywide agencies and associations, then organized to extend the work of the Home Health Care Committee and to gather more information on home care. The consortium has designed informative materials, largely based on the Home Care Committee's report, in order to clarify the state's status and needs and to increase public awareness of home care services.

According to a paper written by the Home Health Care Committee as part of a Comprehensive Health Plan, about 7,000 people are on waiting lists for placement in county homes. "There is a projected need for 35,000 new nursing home beds by 1980. The projected cost for compliance with the Life Safety Code Standards and construction of new nursing home facilities is over one billion dollars. Thirteen percent of Pennsylvania's population over 65 are functionally disabled. By 1980, a 24 percent increase in the state's population over 65 is expected with the elderly constituting 13 percent of the state's population."

Home Care—an alternative to hospital or nursing home care—is one way to meet the public's demands because it is delivered in the home rather than in more expensive health care facilities; it makes use of community organizations and health professionals who can lighten the load of physicians; and it stresses preventive medical techniques which may help to avoid hospital admissions or readmissions. Home health care can be more effective and less expensive in providing services to those who do not need, or no longer need, 24-hour professional supervision.

Home care is a general term referring to a combination of health care and social services to individual people and families in their own homes or other community home-like settings. Convalescents, disabled, chronically ill, elderly, and primarily home bound people are eligible for home care. Services are provided to them so that they may attain and maintain their own optimum levels of functioning—and that they may do so with dignity.

Suitability of a home

A major problem of home care as a component of a comprehensive health plan is that third party payment for most services may be obtained only through physician referral and many doctors do not know how or where to refer patients—or even when home care is suitable for a patient.

In a booklet entitled "Home Care: An Interpretation with Instructional Adaptor," written by the Pennsylvania Home Care Information Consortium, lists some basic attributes of a home atmosphere suitable for home care:

"Is it a quiet home? A sick person can be extremely sensitive to excessive noise.

"Are there stairs leading to the home or inside? For some individuals stairs can pose a serious problem. But they can be replaced by a ramp, bannister lift, or other device.

"Will the person have a private room? One near a bathroom and dining facility is ideal.

"Will the doors and hallways accomodate a wheelchair or walker? Plenty of room is needed for maneuvering.

"Are there small children in the home? Youngsters cannot be expected to remain quiet all the time.

"Is there an adult nearby during the day? At night? Not all persons receiving home care need constant attendance, but a relatively helpless person will be safer and happier with someone there.

"Does the individual have easy access to a telephone? This is essential for morale and a sense of self-sufficiency.

"Is a television or radio available for the person's room? These help pass the time and keep the person in touch with the outside world."

Because home health care is often a difficult task and may require special procedures and transportation to medical facilities, the willingness and capability of all concerned to deal adequately with any household inconvenience is essential.

Determining eligibility

Although the individual person and his family should make the final decision whether or not to use home care, the physician may be best able to determine who would most benefit from

it. If the person's home atmosphere is conducive to and effective in maintaining or improving his health and he does not need the complex services of an institution, home care may be the best plan for him. Most likely to benefit are:

- individuals and families who need help in facing terminal illness;
- a middle-aged person with a cardiac disorder who requires a prolonged convalescence;
- an elderly person handicapped with arthritis in need of rehabilitation therapy;
- a person who needs assistance in managing the home from a homemaker, nutritionist, or family social service agency;
- a baby with diabetes, or a young mother with high blood pressure;
- a child who needs assistance when the parent is hospitalized; or
- persons under distress or disorganization who have no family available to help.

In some cases, public or voluntary health and social service agencies, community or religious groups, or public officials may refer people for some home care services.

The well-being of the individual should be the main goal of all agencies and services working to provide home care, whether they are professional or voluntary and whether they provide medical, social, recreational, nutritional, or other services.

After medical needs have been established, generally by the physician, professional care received in the home can include skilled nursing, physician care, dietary advice, selected therapies, and laboratory services. Staff providing the services may include doctors, community health nurses, physical therapists, social workers, nutritionists, or homemaker-home health aides.

Additional available services such as home-delivered meals or friendly visiting and recreation may be provided as needed. A plan of care is developed after evaluating the total health and social needs of the individual person.

Essential components of home care are: teaching self-care; securing necessary equipment and supplies; instructing the family in the physical case of the individual, and helping the family members to cope with the problems resulting from the illness or disablement.

Financing home care

Payment for home care is similar to that for other types of care—they may be covered by medicare or medicaid, third parties such as Blue Cross, commercial insurance plans, the Veterans Administration, United Way agencies, or local government agencies such as Area Agencies on Aging. Many home care agencies give care beyond the limits of insurance coverage if the need persists.

Medical assistance—Pennsylvania's medical assistance program covers nursing care in the home and includes benefits for many elements, including medical equipment and supplies. Medical assistance pays up to 180 days after hospitalization for a hospital home care program. There is no limit on the number of days of skilled nursing facility and/or intermediate care facility care as long as the person needs that level of care.

Medicare—Medicare provides home health care insurance for older persons. It pays home care benefits under both hospital insurance (Part A) and medical insurance (Part B), but it has specific requirements governing those services for which it will not pay.

Under hospital insurance, the following conditions must be met:

- the patient must have been in a qualified hospital for at least three days in a row;

Do You Know

Your Health & Social Service Needs...

may be taken care of in your own home?

- ☐ Medical Help
- ☐ Personal Care
- ☐ Hot Meals
- ☐ Transportation
- ☐ Help with Household Chores
- ☐ Nursing Services
- ☐ Religious Services

- and More!

Do you know your health and social service needs may be taken care of in your own home? They may be. Through Home Care!

Home Care is a system of services to individuals and families in their own homes or other community or home-like settings.

This system combines health services and other community-support, social services which may be necessary such as home delivered meals, medical help, transportation, homemakers and chore services, nursing services, personal care, and religious services. And more!

Many of these services are already available through the efforts of local professional organizations, community volunteers and public and voluntary agencies.

In addition, these organizations and people are working hard to build more services into a coordinated home care program which will allow even more people the opportunity to be served at home rather than in a hospital or institution.

These services are available to all who live in this particular home care area, regardless of age, religion, ethnic background or economic status.

To find out whether your needs can be served by home care, contact:

PHYSICIANS MAY inform their patients about home care by distributing the above leaflet to patients or by mounting a larger version on a waiting room wall. Materials suitable for reproduction may be obtained through Community Services of Pennsylvania, 201 Locust St., Harrisburg, PA 17101; (717) 238-7365.

• home health care is for further treatment of the condition for which someone was hospitalized or in a skilled nursing facility;

• the care must include part time skilled nursing care, physical or speech therapy;

• the patient must be confined to the home;

• a doctor must determine that home health care is needed and set up a plan for care within 14 days of discharge from a hospital or nursing home; and

• the home health agency providing the care must be a participant in medicare.

If the person has met all six of the above conditions hospital insurance will pay the full cost of up to 100 visits during a benefit period. Medicare will continue to pay for visits for one year after the last discharge from the hospital or nursing home.

Medicare medical insurance will pay for 100 home health visits in a year without a hospital admission if the following conditions are met:

• the patient needs part time skilled nursing care, physical or speech therapy;

• a doctor decides someone needs the services and sets up a home care plan;

• the patient is confined to home; and

• the home health agency is a participant in medicare.

After the $60 deductible has been met, medicare pays the full cost of home visits.

Social Security—Title XX of the Social Security Act provides for social services to eligible people ". . . to help persons achieve or maintain self-sufficiency, including reduction or prevention of dependency." Home delivered meals, chore services, homemaker, counseling, transportation, and legal services are included.

Blue Cross—The Blue Cross Association in Chicago has encouraged Blue Cross Plans to offer home care benefits and to participate in their planning, development, and implementation. All Blue Cross Plans in the state offer subscribers coverage for some home care benefits, although in varying degrees.

Capital Blue Cross, appreciating cost-saving possibilities of home care, has expanded its coverage to provide benefits for up to 30 visits for home care during any 90 day period. According to a pamphlet, "Outpatient Care: Providing Alternatives to Hospitalization," the Plan has determined that the average cost of home care is only about 15 percent as much as that per day of in-hospital care.

Other Capital Blue Cross programs of alternative health care delivery to keep inpatient hospital stays to a minimum are: pre-admission testing; short procedure surgical unit (same day surgery); outpatient alcoholism rehabilitation; and day psychiatric care.*

The private health insurance industry has supported community health

A PATIENT pamphlet, the cover of which appears above, contains the same message as the leaflet on the opposite page. Materials for reproduction are available in either English or Spanish through Community Services of Pennsylvania.

For details write Capital Blue Cross, 100 Pine St., Harrisburg, PA 17101.

planning in developing new forms of benefits including home health care.

Even when the cost of home care is covered by commercial insurers or Blue Cross, its use has been limited, possibly due to physicians' lack of awareness or understanding of the services. Some physicians may feel that they would lose control of cases and services would be fragmented if patients were to enroll in a home care program. Patients may feel that treatment is inferior to in-hospital treatment and may hesitate to suggest it to their doctors.

Whether or not home care is really less expensive than institutional care is an issue which has not been fully resolved. The Home Care Consortium suggests, "Any discussion that compares the cost of home care with the cost of other types of care must be very carefully approached. Home care could be the preferred care, but it also could be more expensive care depending on the extent and number of services needed."

Status in Pennsylvania

The State's Home Care Committee in developing its plan for comprehensive home care noted that various elements of home care and supportive services are available in some limited fashion in most counties in Pennsylvania, although not in a coordinated way.

Scope and availability of home care services depend on the county and community but may be provided by a number of sources including public agencies, visiting nurse associations, homemaker-home health aides, home care units of hospitals, or voluntary social agencies.

During its study of available services, the Home Care Committee found that volunteer groups provide homemaker, chore, and transportation services in a few counties; some communities provide home nursing care to persons with cerebral palsy through the Elk's Clubs United Cerebral Palsy Service Programs; some associations of the American Red Cross have transportation services, equipment loans, and home nursing training.

Some voluntary agencies, such as Easter Seal Societies, March of Dimes, Multiple Sclerosis Society, United Cerebral Palsy, and the Pennsylvania Association for the Blind, directly or indirectly provide physical therapy, occupational therapy, speech therapy, special equipment, and other services.

All county Mental Health/Mental Retardation Service Units have funds for the purchase of home care services to the mentally retarded. These home care services are not limited to nursing but include homemaker-home health aide service, sitter-companion service, transportation, family education training, and in-home therapy.

At least 87 homemaker-home health aide service providers exist in Pennsylvania. Home Health Agencies provide homemaker service in some areas. Some Child Welfare agencies give homemaker service directly; others contract for them in order to meet their agency mandate to provide supportive services to maintain children in their homes.

In a few areas, specialized home training programs for the blind are conducted through the Office of the Visually Handicapped or branches of the Pennsylvania Association for the Blind.

Many counties have home economist and nutrition education services, available through the Pennsylvania State University Cooperative Extension Service, which provide some nutrition counseling and education services in the home.

Pennsylvania has 47 Area Agencies on Aging. The agencies are responsible for implementing an integrated and coordinated system of social services for the aging. Each area agency is responsible for development and provision of case management, information and referral, outreach, and transportation/escort services. In addition, area agencies are required to provide or contract for homemaker services and home delivered meals.

Appended to this article is a list of home care service agencies in the state.

In addition to the community home care services, Pennsylvania has at least 31 hospital home care departments, according to the Home Care Consortium report. A significant number of individuals are served by the hospital facilities. Hospital based programs are essentially extensions of the hospitals and are administered as part of the overall care of the hospitals. A large number of patients are referred directly to the home care unit without prior hospital admission while a smaller number come from other hospitals and nursing homes. Home care recipients released directly from the hospital provide the major portion of the community hospital home care cases.

The Home Health Care Committee and the Community Services of Pennsylvania have pointed out the need for coordination and standardization of comprehensive home care programs in the state. Among the recommendations of the Home Health Care Committee are that:

- a statewide home care unit be designated to coordinate various home care programs, to develop home care programs, and to provide consultation, collect and disseminate data related to home care;
- all services included within the care plan for the client be reimbursable;
- health insurance carriers be required to include coverage of home care benefits within all policies;
- all third party payors including medicaid reimburse for services at cost and the state medicaid plan be reviewed and expanded; and
- some program be developed providing either subsidies or a tax deduction system to those assuming primary care responsibilities for a disabled family member.

Home health care is gaining support as more public agencies and other organizations become aware of the possible benefits. In spite of the limited coordinating activities among providers, home care can be an efficient component of the health care delivery system and has proved to be the most suitable alternative for many people. □

Hospital quality assurance—PSRO after five years

On October 30, 1972, P.L. 92-603 was passed creating this country's first nationwide attempt at quality and cost control of medical care. PSRO was received by the medical profession with serious reservations. By September 1977, almost five years after enactment, PSRO seems to have accomplished some of its initial objectives. Whether or not the program continues to function in its present form, the review process that it has fostered is here to stay.

Prior to PSRO, attempts had been made at public accountability and quality control but these were usually fragmentary, unstructured and hindsighted. Retrospective review often resulted in retroactive denial of payment for services, causing consternation among physicians and hospital administrators alike. The present system of concurrent review eliminates this problem. The establishment of utilization norms and criteria under PSRO mandate has provided structural equality which was previously lacking.

Although PSRO was initially alleged to be merely a cost control agency, it was intended to link efficiency with quality assurance in medical care. This was to be accomplished through two components, utilization review and medical care appraisal activities.

Utilization review (UR) monitors the process of delivery of medical care from admission to discharge of a patient and provides a cost control mechanism at a time when public concern is being voiced about rising costs of medical care. Control of necessity of admission, control of length of stay through delineation of acute and custodial care and assurance that medically necessary care is rendered at the proper health facility can have a significant dollar influence. Although UR may be more expensive than originally thought, it is still cost saving. UR is a deterrent to extended hospital stays.

But efficient use of health facilities does not account for quality control in patient care. Quality control is the province of the medical care appraisal study and is judged by retrospective assessment and evaluation. Criteria or standards are pre-determined and comparison with actual practice data is made, thereby identifying patterns of care. Deviations from the norm are targeted for further evaluation. If the deviation is significant, an education program is indicated. Quality assurance depends upon the effective and judicious use of medical education programs and follow-up for evidence of behavioral or practice modification. Audit activities are both important to the system and beneficial to physicians.

The medical profession is doing a good job. Utilization review and medical audit are proof of that. Quality assurance is our self-insurance against excessive government intervention and must be pursued with vigor.

Dealing with 'demon' pain

Reprinted from the Allegheny Medical Society Bulletin.

We have become caught up in our fast paced, bionic, disposable world, with desires to replace old with new, and remove all tension and suffering from our existence, regardless of cost.

Unfortunately, many patients feel that medicine is an exact science and has advanced concurrently with other technologies. This misconception has given patients the impetus to continually seek means of relief for their suffering. This tragedy is seen clearly with patients in chronic pain and their desire for a panacea.

We see many patients in an "end of the road" effort to provide some means of relief for their pain. Many have had numerous aggressive or invasive procedures to "make them brand new" only to find themselves in a worse condition.

Indications exist for performing invasive procedures, but patients must be carefully selected. It is neither glamorous nor rewarding to deal with such patients once they have become angry, frustrated, distrustful, and depressed because previous measures have failed.

It is time to share information—to re-educate ourselves and our patients. We need to re-explore many

of the noninvasive methods of treating pain. There is nothing wrong with some of our predecessors' methods. These may seem archaic in style, but are perhaps innovative in theory. Such methods in modern nomenclature are called biofeedback, transcendental meditation, acupuncture, hypnosis, positive suggestion, electrical stimulation, etc.

In view of the above, we initially thought acupuncture would be quite promising following its discovery by the media in the early 1970s. There were many reports of "miracle cures" and, despite peer criticism, we felt an obligation to explore the claims. This method was first experienced personally and later offered to a few desperate volunteer patients. Initially, we had some success, but when acupuncture's popularity ceased, we also experienced diminishing returns from our efforts. In addition, our concurrent laboratory studies paralleled our fading success with both human and animal experimentation. For these reasons we and many other groups eventually abandoned this modality. We have, however, continued to search for the least traumatic, non-invasive method to control chronic pain.

Biofeedback is helpful for a select group of patients, mainly those experiencing tension headaches and migraine headaches. We feel this method has promise, in spite of some limitations. To use biofeedback with any success, the patient must be motivated, intelligent, able to think abstractly and have no secondary gains from his problem.

The 1965 publication of the "Gate Control Theory of Pain," by Melzack and Wall, reawakened interest in the use of electrical devices for the control of chronic and acute pain. This interest resulted in the development of external and internal stimulators, but their reported success varies. Twenty to thirty percent of patients given these modalities of treatment respond to some degree, although we have no comprehensive neurophysiological explanation for this phenomenon. Our practical goal in treating patients with chronic pain is to relieve pain in the least harmful way possible.

In trying to discover new methods of pain control and study results in a "scientific" manner, a number of basic, but essential, factors are frequently overlooked. First, we must educate our patients to accept the fact that part of the responsibility for getting well depends on them, for example: losing weight, exercising, not engaging in activities beyond their physical capacity and realizing that to search for an absolute pain-free existence can harm them in the long run.

Dr. Tenicela is director of the Pain Clinic at the University Health Center of Pittsburgh, and a world respected expert in pain control and research in this field of pain.

Second, it is our duty to continue searching for the least invasive means of providing relief, even if this means telling a patient he is better off with no treatment if this is indicated (a hard fact for most patients to accept). And last, we should not overlook the most important, rapidly vanishing elements of our care—the doctor-patient relationship, understanding, a warm gentle approach, and development of the patient's trust.

We may be able to replace joints, heal fractures or manage hypertension, but pain will always be with us and exorcising this "demon" will always be a challenge and a puzzle for the physician.

Co-Tylenol reformulated

To the editor:

This is in answer to the letter to you from Claude A. Frazier, M.D., which appeared in the July issue of PENNSYLVANIA MEDICINE.

While it is true that CO-TYLENOL® Cold Formula Tablets contain tartrazine (FD&C Yellow #5) dye, the product has been reformulated to remove that coloring agent and production of the new formula will start in the near future.

Data needed on fatal stings

To the editor:

For a number of years I have routinely prescribed an insect sting kit for my insect allergy patients thinking somewhat smugly that I was protecting those patients from future possible hazard. A few years ago I was shocked to learn that it is illegal in most, if not all states, for anyone other than a physician to administer the vital premeasured epinephrine contained in the kit, even if the victim of a sting is obviously in great difficulty and the nearest physician or hospital many miles and minutes away. I discovered that even a school nurse, though she is given permission by the parents, and even if the child has an insect sting kit in his possession, cannot legally administer the subcutaneous epinephrine injection to stave off fulminating symptoms of anaphylaxis long enough to get the child to a physician or hospital. The best she or the school authorities can do under the law is to call the parents to come take the child to the physician or rush the child there themselves. Since time is of the essence in a severe systemic reaction this could be tantamount to signing the child's death warrant.

Worse still, when I queried a patient of mine who was a member of a rescue squad, whether he had ever been called upon to assist someone suffering a severe systemic reaction to an insect sting, he replied, "Yes, but he died enroute to the hospital." Even with his 84 hours of training in meeting emergencies, he had received no training in the administration of epinephrine and even if he had, would not have been allowed to administer it.

Spurred by such revelations, I have been attempting to find a legal solution to this situation in my own state of North Carolina and elsewhere. In support of such an attempt, I am collecting data on insect sting fatalities. I am especially interested in time lapse between sting and death although information concerning the following would be helpful: (1) time sequence of symptoms; (2) previous reactions to insect stings; (3) medication on hand at time of sting; (4) type of medication; (5) type of insect; (6) number of stings; and (7) estimation as to whether or not a physician or hospital emergency room could have been reached in time to avoid a fatal outcome.

Asheville, NC 28801

Cardilate® (erythrityl tetranitrate)
INDICATIONS: For the prophylaxis and long-term treatment of patients with frequent or recurrent anginal pain and reduced exercise tolerance associated with angina pectoris, rather than for the treatment of the acute attack of angina pectoris, since its onset is somewhat slower than that of nitroglycerin.

PRECAUTIONS: As with other effective nitrites, some fall in blood pressure may occur with large doses.

Caution should be observed in administering the drug to patients with a history of recent cerebral hemorrhage, because of the vasodilation which occurs in the area. Although therapy permits more normal activity, the patient should not be allowed to misinterpret freedom from anginal attacks as a signal to drop all restrictions.

SIDE EFFECTS: No serious side effects have been reported. In sublingual therapy, a tingling sensation (like that of nitroglycerin) may sometimes be noted at the point of tablet contact with the mucous membrane. If objectionable, this may be mitigated by placing the tablet in the buccal pouch. As with nitroglycerin or other effective nitrites, temporary vascular headache may occur during the first few days of therapy. This can be controlled by temporary dosage reduction in order to allow adjustment of the cerebral hemodynamics to the initial marked cerebral vasodilation. These headaches usually disappear within one week of continuous therapy but may be minimized by the administration of analgesics.

Mild gastrointestinal disturbances occur occasionally with larger doses and may be controlled by reducing the dose temporarily.

HOW SUPPLIED: 10 mg chewable scored tablets, bottle of 100. Also 5, 10 and 15 mg oral/sublingual scored tablets in bottles of 100. 10 mg oral/sublingual scored tablets also supplied in bottles of 1,000.

Also available: Cardilate®-P brand Erythrityl Tetranitrate with Phenobarbital* Tablets (Scored).

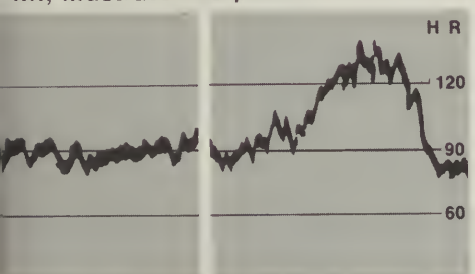
"**Our sex life is nil...**" A problem of the first magnitude to many post infarct patients and their mates...patients are often reluctant to broach the subject; physicians may frequently overlook its implications. This new 16mm film combines candid patient interviews with discussions by Drs. Herman Hellerstein, Thomas Hackett, Albert Kattus, Richard Stein, Carroll Witten and Lenore Zohman. Film and related monograph comprise 2 AAFP credit hours. To arrange viewing, write Burroughs Wellcome Co., Educational Services Department, Research Triangle Park, N.C. 27709 or contact your B.W. Co.® representative.

Sex and the heart patient:

A film every doctor should see.

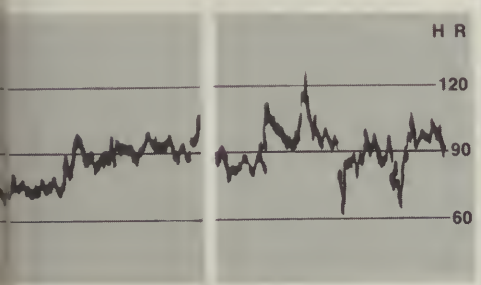
The energy cost of sex to the heart is relatively modest.
Over 80% of post-coronary patients can ultimately resume sexual activity without serious risk. Hellerstein and Freedman demonstrate that mean maximal heart rate during orgasm with spouse (as opposed to extra-marital sex) in 14 post-infarct patients is lower than that during usual occupational activity.

Representations below of actual EKG readings of an attorney, post MI, illustrate the point:



A. Working in office (about 90 beats/min)

B. Confrontation in judge's chamber (about 125 beats/min)



C. Pre-orgasm sex activity (about 90 beats/min)

D. Peaks at orgasm (120 beats/min)

Fear of pain greatest deterrent to post MI sex
In the multitude of MI patients with angina, pain is due to diminished coronary reserve and increased myocardial oxygen demand, precipitated by sex, other excitement and improper exercise. Anginal pain, however, can be relieved, and its recurrence mitigated.

Cardilate® (erythrityl tetranitrate) increases exercise tolerance.
Cardilate relieves anginal pain and prevents its recurrence, thereby allowing increased activity.
Commencing to work in as little as 2 to 5 minutes, Cardilate protects against recurrence of angina for at least 2 hours.

Available in both sublingual and chewable forms, Cardilate is a versatile, convenient agent to help make the angina patient's life more livable.

Cardilate®
(erythrityl tetranitrate)

practice management

Dividing the group income pie

LEIF C. BECK, LL.B.
VASILIOS J. KALOGREDIS, J.D.
Bala Cynwyd

No longer is group practice a futuristic concept—it is a present day and proliferating reality. The authors' counsel can help groups avoid a common problem.

The most enduring problem of group practices is how much income should be distributed among the group members. We are convinced that inability to cut up the "money pie" satisfactorily causes more dissention and dissolution in medical groups than all other factors combined. The effect often develops slowly, but if a segment of the group feels that it is underpaid the dissatisfaction tends to grow until it threatens the group's continuation.

There are many critics of our present health care system who believe most doctors are particularly money-oriented. We disagree. Physicians tend to be highly intelligent and professional people with an inordinate amount of pride and self-reliance. The natural result is an unusually well developed ego.

In light of this, compensation often rises above its importance as mere money. Instead it becomes a measure of relative personal worth and importance to the group. It is unfortunate that relative incomes can so easily be compared and take on importance far in excess of what the earners really are contributing; however, the situation is common. Hence, dividing group income involves matters of personal ego as well as economics. This makes it an extremely touchy problem in group practice.

Basic alternatives

There are two basic income division alternatives: (1) straight percentage division and (2) productivity division. Both have advantages and disadvantages which should be recognized. The method a group chooses could be either pure system or any combination of them. If a special formula is developed it should be fairly simple to understand and easy to administer. A highly complex formula tends to cause artificiality and confusion, defeating the formula's presumed incentives.

The authors are the principle consultants of Management Consulting for Professionals, Inc., Bala Cynwyd.

Straight percentage division

The simplest of all methods is for the participants to divide equally the income from their efforts. Other groups divide income in fixed percentages which are not equal, perhaps in recognition of seniority, time involvement, or special training. In either case, distribution of income is in a predetermined, fixed ratio—a straight percentage division.

A percentage method has the advantage of offering the doctor-members a group incentive. Each member prospers so long as the venture produces sufficient income, regardless of which individual doctor actually performed the work. Hence, the doctor-members should feel free to have patients treated by various doctors in the group for advantages in scheduling, special experience, and the like. OB-GYN men, for instance, can see their patients alternately or as they consider most useful and can assign deliveries according to their working schedules without concern of any adverse income effects. Other specialty surgeons in joint practice can set their operating schedules for most efficient use of their members' time and talents. Similarly, one man's contributions to administering the office or performing other "non-chargeable" functions will not penalize him.

Percentage division tends to encourage a cooperative effort for the good of the group. It minimizes competition among the members since there is no direct financial reward for seeing more of the group's patients, producing more of its billings, etc.

Arbitrary percentage distributions generally work satisfactorily in groups having strong common denominators of age, work motivation, and professional qualifications. They particularly work well when the potential income is high enough to defeat most desires to compete for more of

the available income. Particularly likely to use simple divisions satisfactorily are those practices which involve the most patient interchange, as in obstetrics. The method has the advantages of being simple in concept and easy to administer. For these reasons it is by far the easiest way to resolve the income division problem.

Unfortunately, the various members of a group rarely make equal contributions to the group's financial success.

'Actual formulas which are in existence and which have worked well are legion, but the most important point to remember is what has been successful to one group may be absolutely wrong for another . . . Income division disputes are likely to grow in intensity as time passes. Prompt attention might save an effective group practice from unnecessary dissolution.'

So long as the differences are small, the members may overlook them; however, as these differences become larger and continue to exist, they will tend to become divisive factors. For instance, one doctor may be taking more vacations or devoting himself to more non-cash producing professional activities (teaching, society work, etc.), while the other doctor is seeing more and more of the patients. One doctor may be increasing his efficiency, while the other doctor tends to spend more time with each patient. Regardless of which doctor is "right" in his approaches to his work, the differences tend to grow. As the differences continue, the disadvantage of a straight percentage division method becomes more evident.

Productivity division

Another approach is to compensate each doctor in direct proportion to the amount he has contributed to the group's income. The common measure of such contribution is the amount of fee charges recorded on the group's books. Hence, if a two-man partnership has net income of $100,000 and the books show that Dr. A's charges during the year totalled 58 percent of the total, then he would be entitled to $58,000 of compensation. If in the succeeding year Dr. A were to reduce his activity and produce a lesser share of the total charges, his share of that year's income would be proportionately less.

Besides rewarding a member for his financial contribution, a productivity division has the additional advantage of being self-adjusting. A partner's share of his group's income will thus vary from year to year just as his efforts may vary. This is often most helpful in the situation in which a senior physician wishes to cut down his practice involvement (more vacations, fewer days per week, less coverage time, fewer hours per day, etc.). This often is a difficult subject for either party to bring up for discussion. The senior may be afraid to ask for the time off; the junior may hesitate to complain if the senior takes more time.

Even if it is discussed, such lessened responsibilities are difficult to measure in dollar terms. Often, both sides feel cheated by the selection of a relatively arbitrary "make up" figure. Also, as the senior continues to cut back, a new "negotiation" as to the proper figure results.

The "production" method would help to reflect such cutbacks. A method that permits adjustment without the confrontation can thus be invaluable.

The majority of medical management consultants, ourselves included, prefer income division methods based at least in part on productivity. However, it should be recognized that such methods also have disadvantages. The prime problem is that it can create a competition among partners for the available work. It thus tends to reward one for creating dollars while ignoring one's other, less measurable contributions to the group. For example, the senior physician whose hospital and professional activity creates referrals to his junior partners would not be recognized for his contribution. Nor would the managing partner of a medium-sized group who spends a large percentage of his time assuring that the joint practice runs smoothly and efficiently.

Productivity division also requires careful bookkeeping of patient charges. This is not really a disadvantage; any practice should have this information, whether or not it is required for income division purposes. The group's total charges for a period are an indication of how busy it was. They are also a means of predicting how much cash will be received in a succeeding period (when the charges have been billed and payments are received). Furthermore, a group should record its members' relative production even if they share income otherwise, for only by having the information can the members recognize changes or inequities before too much dissension develops. Sometimes a group may be surprised by the figures.

Combined methods

A combination of the two described methods is often the most equitable result. The group practice might thus obtain the strongest advantages of each method and offer more realistic incentives to its partners.

The simplest example of a group's combining the percentage and productivity methods follows: Half of the net income of the practice is equally divided among its partners (or distributed in some other pre-determined percentages) and the other half is divided in the ratio of the members' actual charges. In this manner, each partner has a strong incentive to make the overall group as successful as possible (regardless of which partner actually sees more patients); he also has a personal incentive to produce. Since both group loyalty and individual ambition should be accepted and desirable attributes, the formula combining incentives for each should be a workable solution.

Variations on the 50-50 combinations are limitless. We have several group practice clients, for instance, who equally divide 60 percent of their income and then allocate the other 40 percent according to productivity. This is simply based on their recognition that the entity's success

deserves somewhat more emphasis than does the personal advantage. Other practices have gone the opposite way after analyzing the characteristics of their specialties, the "market" for their services and, of course, their members' personalities.

A small practice (two or three partners) is likely to find a simple combination method to work very well. As the group becomes larger the formulas tend to become more sophisticated.

Point value systems

Larger and often multiple specialty oriented groups sometimes extend the combination approach still further by adopting a "point value system." Such a system is intended to measure precisely the total contributions all members make to the group's success, going beyond the comparatively simple concept of production. A point system might give credit for such items as educational and professional society activity, contribution of capital to the partnership, hospital staff leadership, age or years of practice, office management responsibility, certification, work production, or "drawing power."

The elements of a point system are simple to describe. The various criteria adopted by the group are simply assigned "points," and then each member's points are totalled for the year. The income of each member is figured according to the ratio of his points to the total points for the entire group.

Under an illustrative method, one point might be awarded for each $100 of charges produced, ten points for each year of specialty practice, and fifty points for each specified medical society or hospital staff responsibility. A doctor who has been in a specialty for 12 years, who is chief of his hospital's department, and whose work has produced $60,000 of charges in a year would thus be allocated 770 points to decide his final share of the practice's net income for the year in question.

While the point value system attempts to evaluate each member's contribution to the group's overall success, it has one very serious flaw. The group's attempt to quantify relative values for such matters as seniority, production, and professional status itself involves a negotiation among the partners. All too often, these different matters are assigned points on a negotiated basis, and the partners might just as well have determined mere percentage divisions in the first place.

What is more, even if the point values are satisfactorily determined, such systems have other built-in disadvantages. First, as they become more and more sophisticated, they tend to become understood less by the doctors involved. This difficulty may well defeat any incentive effect such systems might have been intended to produce. Second, point systems tend to require special and often extensive accounting work, not to speak of the amount of members' time devoted to tabulating their relative point situations. All in all, while point value systems seem excellent in theory, they have been far less successful in practice.

Conclusion

This article has described basic approaches to the extremely touchy problem of dividing income. Actual formulas which are in existence and which have worked well are legion, but the most important point to remember is what has been successful to one group may be absolutely wrong for another. The problem simply requires honest and candid attention by all the group members. It should also require some continued periodic attention by the group. Partners should act promptly to recognize and resolve any dissatisfaction as soon as it develops. Income division disputes are likely to grow in intensity as time passes. Prompt attention might save an effective group practice from unnecessary dissolution. □

Know your taxes

What you always needed to know about selling your practice and didn't know you had to ask

DONALD L. DeMUTH, M.B.A., C.P.A.
EDWARD H. ACHORN, M.Adm., C.P.A.
Harrisburg

The sale of a practice can result in exceedingly complex tax ramifications. A physician should consult his attorney, accountant, or consultant, or perhaps all of them when he decides to sell his practice. Different results will occur whether he is selling an unincorporated solo practice, his share of a partnership, or his stock in a professional corporation.

Unincorporated solo practice

When a physician sells his practice, his assets typically are uncollected patient receivables, equipment, and perhaps his office. Unpaid bills and loans for equipment and the office are sometimes obligations of the practice.

As a general rule, gains on the sale of business property (which would include property used in a practice) are subject to long-term capital gains tax provided they have been held more than nine months (one year after 1977). The exception to this rule occurs when the property's ultimate realization would normally generate *ordinary* income. For instance, virtually all physicians pay tax on the cash basis. No tax is paid until a fee is collected. No deduction is permitted until a bill is paid. If the physician were to continue to practice and collect his receivables, he would pay ordinary income tax rates on that income. Therefore, when he sells his uncollected receivables, any money received for them will be taxed at ordinary income tax rates.[1] The difference between the amount received for equipment and the office[2] and their depreciated values will be taxed as capital gains.

Sometimes the price of a practice includes an additional amount for goodwill or a covenant not to practice within a certain geographic area. Any money received for goodwill, which is the intangible extras one obtains from an established practice, is taxed as a capital gain; but any amount paid for an agreement not to practice in a specified locale is considered ordinary income and taxed as such. Take a look at the following comprehensive example.

A retiring plastic surgeon is selling his practice to a physician completing his residency program. The "book" value of his assets and liabilities for tax purposes are shown in Table I.

The two agree that the retiring man will keep the $1,000 cash and the younger doctor will assume the debts of the practice. The younger doctor agrees to pay $75,000 in cash for the practice, which will be allocated as follows: accounts receivable, $4,750; equipment, $8,000; office, $60,000; goodwill, $3,250; and covenant not to practice, $5,000; for a total of $81,000.

Notice that the value of the items acquired is $81,000. This is equivalent to the amount of the cash paid plus the liabilities assumed. ($75,000 cash plus $6,000 in liabilities total $81,000.)

TABLE I
Sale of Unincorporated Solo Practice

Assets	
Cash	$1,000
Accounts Receivable ($5,000 owed)	—
Equipment	3,000
Office	25,000
Total Assets	$29,000
Liabilities	
Bills Payable	$2,000
Mortgage Loan	4,000
Total Liabilities	$6,000

The assumption of debt is as much a part of the purchase price as the outlay of cash.

While the doctor is owed $5,000, his patient receivables are, for tax purposes, considered to have a zero value until collected.

The gain on the sale of the equipment and furniture used in the practice will be specially taxed. The portion of the gain equal to the total depreciation taken on previous tax returns will be taxed at ordinary rates, and the portion of the gain in excess of total depreciation previously taken will be taxed as capital gains.

For example, in this case the doctor had taken $2,000 of depreciation in the past on equipment which cost him $5,000. The equipment has a book value of $3,000 ($5,000 cost minus $2,000 total depreciation). The portion of the proceeds from the sale of his practice allocated to the equipment is $8,000. The gain on the equipment is $5,000 ($8,000 proceeds allocation minus $3,000 book value). Of the $5,000 gain, $2,000 (the amount of the total depreciation) is taxed as ordinary income and the remaining

This article, part eight of the series Know your taxes, *is the third on the subject of capital gains taxation. Mr. DeMuth is assistant professor of accounting and finance at The Pennsylvania State University, Capitol Campus. Mr. Achorn is assistant professor of accounting and management at Penn State. For reprints write either Mr. DeMuth or Mr. Achorn at The Pennsylvania State University, The Capitol Campus, Middletown, PA 17057.*

1. The same would hold true for the amount received for inventory in excess of its purchase price.

2. A portion of the gain on real estate would probably be taxed at ordinary income tax rates if accelerated depreciation were used instead of straight-line depreciation.

TABLE II
Income on the sale of a practice

Asset	Amount Received	Book Value for Taxes	Ordinary Income	Capital Gains
Accounts Receivable	$4,750	—	$4,750	—
Equipment	8,000	$3,000	2,000	$3,000
Office	60,000	25,000	—	35,000
Goodwill	3,250	—	—	3,250
Covenant Not to Practice	5,000	—	5,000	—
Total	$81,000	$28,000	$11,750	$41,250

$3,000 is taxed as a capital gain.[3] If the gain is less than or equals the aggregate depreciation, the entire gain is taxed as ordinary income.

Table II shows the income of a surgeon selling his practice.

The new doctor is paying $4,750 for the receivables to allow for bad debts and to be compensated for collecting them. Note that a payment for goodwill is taxed as a capital gain and compensation to agree not to compete is treated as ordinary income. The reasoning behind the law is that goodwill belongs to the practice. It is the value of having patients familiar with being treated at a specific location, and other intangibles. Payments for agreeing not to practice are considered compensation in lieu of what could be earned by practicing.

TAX TIP—If you are selling a practice, try to get as much of the purchase price allocated to your equipment, office, and goodwill as possible. If you are buying a practice, attempt to allocate a large portion of the purchase price to an agreement not to practice. This is advantageous to a buyer from a tax point of view. He will most likely be able to write off the cost of a covenant not to compete more rapidly than he can depreciate equipment or an office. Also, the buyer should avoid paying anything for goodwill, because he will never *be able to write it off for tax savings. Even after a price is negotiated for an unincorporated solo practice, it is often just as important to negotiate the allocation of the price among the assets acquired.*

Partnership interest

When a partnership interest is sold, the gain is taxed as a capital gain with the exception of payments for unrealized receivables and the depreciation taken to date on the equipment. Table III examines how the gain on the sale of the unincorporated solo practice in the previous example would have been treated had it been a sale of a partnership interest.

Note that the portion allocated to accounts receivable equals the amount of receivables which belong to the partner, $5,000, versus $4,750, which was previously paid for them. Furthermore, in the partnership's tax books, sale of a partnership interest does not result in goodwill or a covenant not to practice. In other words, the tax treatment of items affecting the partnership will not be changed as a result of a physician's selling his interest in a partnership to another physician.

In this case, the sale of a partnership interest includes no ordinary income for an agreement not to practice. Other than this fact and the difference in treatment of accounts receivable (which should be only a small amount), the tax consequences of a sale of an unincorporated solo practice and a partnership interest are virtually identical.

Sale of stock in a professional corporation

The computation of the gain or loss when selling the shares of a professional corporation is relatively simple when compared to the disposition of a partnership interest or a solo practice. The capital gain is simply the difference between the selling price and the value of property initially contributed—period. There is no allocation of the gain between capital gains and ordinary income. Refer to the example of the unincorporated solo practice which had a selling price of $82,000.[4]

Consider the following: a physician has transfered the following to a professional corporation: $1,000 in cash; $2,000 in accounts receivable; $5,000 in equipment; and a $40,000 office; for a total of $48,000. If he sells his shares for $82,000, his capital gain is $34,000: the selling price of $82,000 minus the initial contribution of $48,000 equals a capital gain of $34,000.

The same result would have been achieved had the seller initially bought the shares of the corporation for $48,000.

At first blush the topic of capital gains appears fairly mundane and simplistic. Further scrutiny indicates this is very often not the case. When faced with a potentially complicated transaction, seek the advice of your financial counsellor. The potential savings will very frequently exceed the cost of the advice. □

3. Other rules apply to such property acquired before 1962.

TABLE III
Selling a Partnership Interest

Total Received[4]		$82,000
Book Value of Partnership Interest[4]		29,000
Total Gain		53,000
Accounts Receivable	$5,000	
Depreciation on Equipment ($5,000 *Cost* - $3,000 *Book Value*)	2,000	
Ordinary Income	$7,000	7,000
Capital Gain		$46,000

4. This includes $1,000 of cash not transferred in the previous example.

CT evaluation of tissue changes in cerebral infarctions

ARTHUR C. F. ZOBEL, M.D.
Scranton

Computerized tomographic (CT) scanning has changed dramatically the evaluation of intracranial disease, allowing the physician to determine intracranial tissue changes in remarkable detail.

In a routine head scan, the patient's head is studied by four scans (8 slices, each of which is approximately 13 mm in thickness). The computer measures the attenuation of a thin beam of x-ray as it passes through the slice of tissue. The data is then processed as a picture on a 160 x 160 matrix. The normal brain tissue is seen as shades of gray, while cerebrospinal fluid appears black, and bone and calcifications appear white.

Materials

This study involved a review of computerized tomographic scans of 150 patients, between 26 and 82 years of age, who had discharged diagnoses of cerebral infarction. All scans were made with a standard 160 x 160 EMI Computer Tomographic Unit. Of these, 19 were eliminated as they were not of a good enough quality to reveal the intracranial structures in detail; 47 were eliminated due to lack of good clinical correlation, as the patients were from other hospitals and complete charts were not available for review.

The remaining 106 scans were examined and divided into two

Dr. Zobel, in the private practice of radiology, is director of radiology at the Community Medical Center, Scranton.

categories: acute infarctions (within 4 weeks) and old infarctions (over 4 weeks). Tissue changes were evaluated and, when available, comparisons were made with radionuclide studies and angiography. Each patient in the series underwent a second complete CT scan after intravenous injection of contrast material.

Results

Patients with acute cerebral infarction (within 4 weeks) numbered 67; 52 were ischemic infarcts, while 15 were hemorrhagic infarcts. The earliest interval between clinical onset and CT scan was within 24 hours. The tissue changes seen on the CT scans were grouped according to the interval after the clinical onset of symptoms.

Patients scanned within 14 days after the vascular insult demonstrated areas of decreased density. The involved areas were not well defined along the margins of the lesions (Figure 1). The majority of the lesions were noted to extend to the margin of the cortex (Figure 2). If the infarction was large, a "mass-effect" with compression and/or displacement of the ventricular system was demonstrated. The amount of displacement, however, was minimal in relation to the large diminished density area; This point helped to differentiate the low grade gliomas, which show a prominent shift in relation to the area involved by the tumor.

In the hemorrhagic infarcts, the lesions were mostly heterogenous in appearance and cortical in location (Figure 3), although several were located deep in the white matter (Figure 4). The areas of hemorrhagic infarction demonstrated irregular margins, but were more heterogenous in appearance and contained more areas of low density. In contrast, areas of intracerebral hemorrhage tended to be more dense and better demarcated.

Sequential scanning, obtained after approximately 14 days, revealed that the infarcted areas had become more

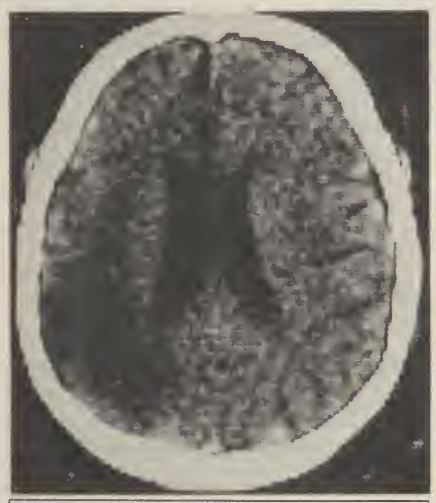

Figure 1. 64 year old female with sudden onset of right hemiparesis. The study was obtained within 24 hours. Note the poorly marginated infarcted area in the left parietal occipital area.

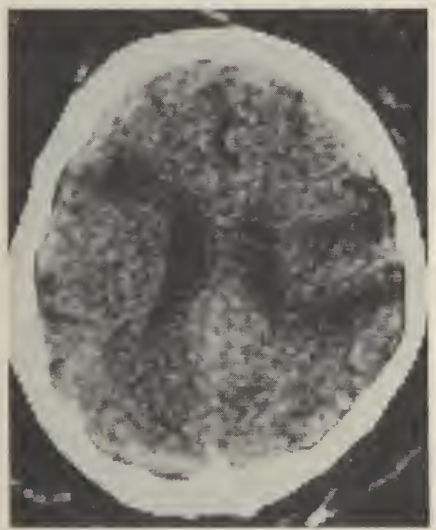

Figure 2. 56 year old male with cardiac arrythmias. Note multiple areas of ischemic infarctions. The study was obtained 2 days after onset of stupor and left hemiparesis.

Figure 3a. 70 year old male with sudden onset of right hemiparesis. The study, obtained within 24 hours, demonstrates a large hemorrhagic infarction in the left posterior parietal area.

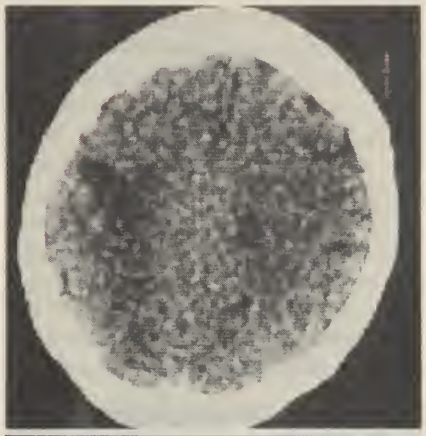

Figure 3b. A repeat scan 19 days later shows almost complete resolution of the infarcted area.

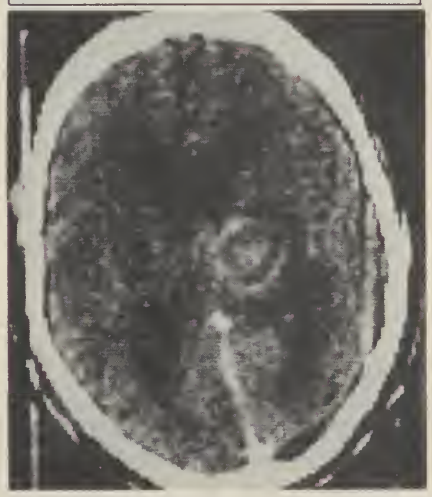

Figure 4. 47 year old male with acute onset of left hemiparesis. Scan done after contrast enhancement demonstrates "ring sign" within infarcted area deep in the right cerebral hemisphere.

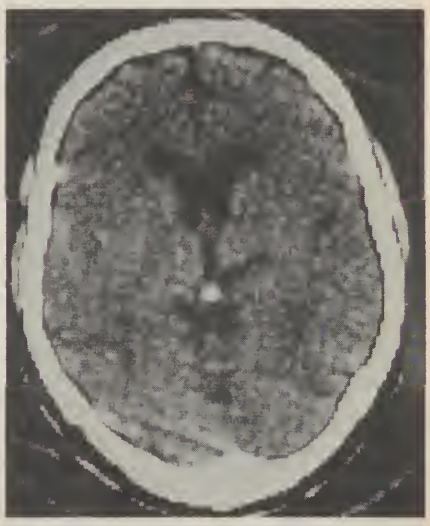

Figure 5: The same patient as in Figure 4. Scan obtained three and a half months later reveals small cyst-like structure in area of previous infarction.

homogeneous, better defined along their margins, and smaller (Figure 5). The characteristics were attributed to less edema, as well as to liquefication necrosis of the infarcted areas.

In comparison with radionuclide studies, the CT scans were positive during the first week to 10 days, while the radionuclide scans usually did not become positive until the second week. CT scans also yielded better definition of the sizes and locations of the infarcts. Abnormalities on the radionuclide scans cleared within 4 to 6 weeks, while areas of infarction that had undergone liquefication necrosis remained positive on the CT scans beyond that time.

Initially we correlated CT changes with angiography until we developed confidence in differentiating the infarcted areas from possible tumors (including metastasis) and frank intracerebral hemorrhages. The CT scans correlated well with the angiographic findings early in the acute infarcts (2 weeks). We did not repeat the angiograms beyond the 4 weeks, so correlation could not be obtained.

Several patients in the series had cerebral infarctions that demonstrated contrast enhancement after intravenous injection of contrast material (Figure 6). Several showed findings similar to the "ring sign" (Figure 4). The amount of enhancement was not as great as that seen in association with vascular neoplastic lesions. Enhancement was most likely the result of focal hyperemia or diffusion of the contrast material into the surrounding tissues.

The older cerebral infarcts (after 4 weeks) appeared as areas of decreased density, more homogeneous than the acute infarctions (Figure 7); the margins were better defined. In all 39 cases no significant "mass-effect" was demonstrated. In 2 scans we noted ipsilateral enlargement of the ventricles due to accompanying cerebral atrophy. The resulting "cystic areas" remained stable after several months (Figure 8) and were readily identified on subsequent scans.

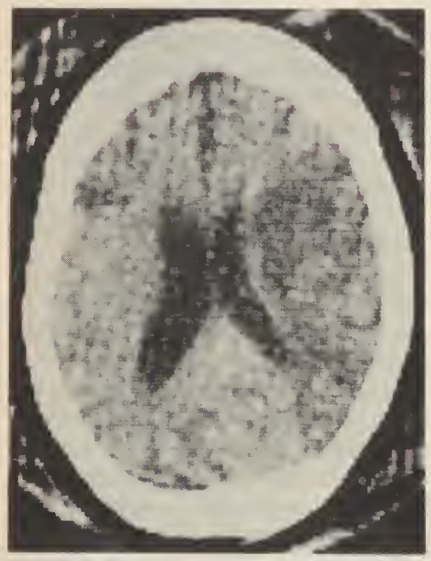

Figure 6a. 68 year old female with left hemiparesis. Scan outlines a large infarction resulting in some compression of right ventricle.

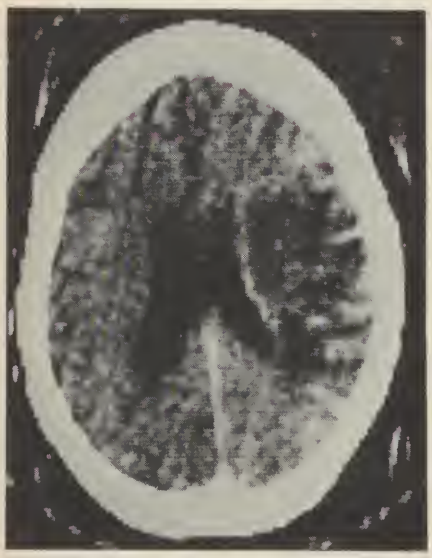

Figure 6b. A followup contrast scan demonstrates enhancement in the infarcted area.

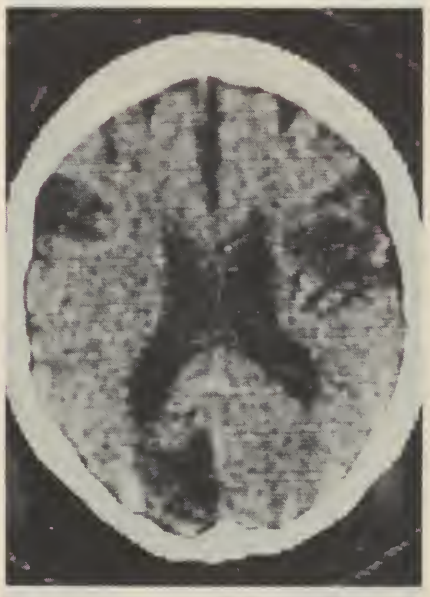

Figure 7. 65 year old female with previous history of multiple infarctions dating back several years. Scan demonstrates multiple, well defined, homogeneous areas of decrease density compatible with old infarcts.

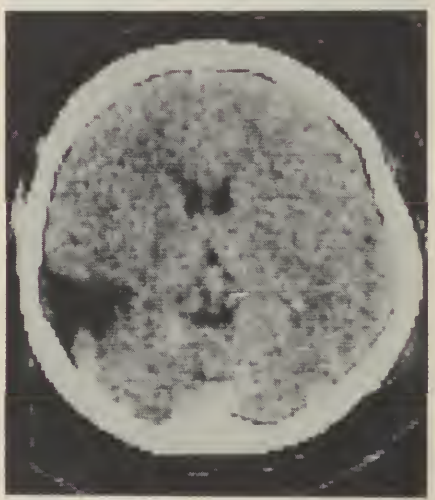

Figure 8. Old infarct in 32 year old female with onset of symptoms 7 weeks earlier. Note well defined area of decreased density in the left posterior parietal area.

Conclusion

Noninvasive CT scanning allows for a detailed evaluation of intracranial tissue changes in patients with cerebral infarctions. The changes can be detected early, and in most instances, when the scan is correlated with clinical evaluation, the correct diagnosis can be made. Our own experience has shown that diagnoses using CT scans require invasive angiography less often. Only occasionally, when a question of neoplasia or a vascular lesion remains, is angiography performed.□

Immediate surgery versus in-hospital observation

Acute abdominal pain in children

DOMINGO T. ALVEAR, M.D.
Harrisburg

The author explores the value of immediate surgery as opposed to intensive in-hospital observation, based on his own experience.

When a child presents with acute abdominal pain and the diagnosis cannot be clearly established, the accepted procedure has been to perform early exploratory laparotomy to avoid a ruptured appendix. For that reason, removal of a normal appendix in as high as 15-20 percent of the cases has been proposed as an acceptable and appropriate management.[1]

In an effort to discover whether immediate surgery is always required in doubtful cases to avoid ruptured appendices, the author reviewed the records of all the children under 14 years of age who had been admitted to Polyclinic Medical Center with acute abdominal pain.

Clinical material

All children under 14 years of age who were admitted to the surgical service of Polyclinic Medical Center for either observation or operation from January 1, 1974, to December 31, 1975, are included in this study—a total of 169 patients (Table I).

Of the total, 65 patients were observed for a period of two to five days, three days on the average. They were discharged without undergoing surgery when their conditions improved. These patients developed no subsequent symptoms or signs that would have necessitated surgical intervention.

Of the remaining patients, 85 had symptoms and signs that were compatible with acute appendicitis, which was confirmed at surgery; 15 of these

TABLE I
Incidence and Treatment of Acute Abdomen in Children
January 1, 1974, to December 31, 1975.

A. "Surgical abdomen" that required laparotomy	
1. Acute appendicitis	
Ruptured	*15 — (9%)*
Non-ruptured	*70 — (41.5%)*
2. Other inflammatory conditions	
a. Mesenteric adenitis	
Suppurative	*3*
Nonsuppurative	*9* — *(7%)*
b. Pinworm	*1 — (9.5%)*
c. Ruptured corpus luteum cyst	*1 — (0.5%)*
d. Twisted dermoid cyst	*1 — (0.5%)*
e. Ileocolic intussusception	*1 — (0.5%)*
f. Acute salpingitis	*1 — (0.5%)*
3. "Negative laparotomy"	*2 — (1%)*
B. "Surgical abdomen" that required observation	*65 — (39%)*
TOTAL:	*169 — (100%)*

patients had ruptured appendices. There was no doubt about the diagnoses in most of these patients except for three who had undergone surgery within 24 hours' observation. In all the patients with ruptured appendices, the ruptures probably occured prior to hospital admission.

Laparotomies performed on 17 patients yielded a variety of findings other than acute appendicitis, including mesenteric adenitis, pinworm in the appendix, ruptured corpus luteum cyst, dermoid cyst, ileocolic intussusception, and salpingitis (Table I).

Two patients were considered to have had "truly negative" laparotomies since the surgeon could not find a definite cause for the abdominal pain. These two patients had been in the hospital for observation for a few days prior to laparotomy. They had had pre-operative workups which included barium enemas and intravenous pyelograms, but these were not conclusive; hence the decision for laparotomy.

Figure 1. Plain roentgen examination of the abdomen showing distended small and large bowel confined to the right side (localized ileus).

Discussion

Accurate early diagnosis is probably the most important single aspect in the care of a patient suspected to have acute appendicitis.[2]. On the other hand, intensive in-hospital observation proved to be of value in preventing unnecessary laparotomies and in improving the accuracy of the diagnosis.

In the presence of a doubtful diagnosis, one should not make a decision for laparotomy until the patient has been transferred to a more comfortable hospital bed and into a "friendlier environment." It behooves a surgeon who is called upon to evaluate a child with abdominal pain not to spend time in trying to gain the confidence and trust of the child so that his findings will become more objective. For the physician who may be less adept in handling children, the problem may be compounded by a lack of familiarity with the techniques of examining patients in this age group. In order to gain the confidence of the child, a short conversation pertaining to his daily activities, likes and dislikes, etc., before asking about the abdominal complaints, can be helpful.

Kindness and gentleness are essential during examination of a child. In the presence of peritoneal irritation, light percussion and "cough" tenderness are generally useful. The latter is elicited by making the patient cough, and if peritoneal irritation is present, it will manifest itself as generalized or localized abdominal discomfort.

In some patients, no amount of persuasion helps to allay the anxiety; therefore, interpretation is difficult. In those patients, mild sedation using a short acting barbiturate without masking signs of peritoneal irritation might be helpful.[4]

Once a decision for observation has

Figure 2. Plain roentgen examination of the abdomen taken in a lateral decubitus posture showing distended loops of small bowel with air fluid levels (bowel obstruction).

Figure 3. Plain roentgenogram of the abdomen showing a calcified fecalith in the area of the appendix.

been made, the patient should be checked periodically by the attending physician or a surgical resident following admission to the hospital. The patients should be kept N.P.O. and are given appropriate intravenous fluids. Those who improve after 24 hours' observation may be started on oral fluids. They may be discharged from the hospital once there has been no recurrence of abdominal pain and they are tolerating oral fluids.

In truly doubtful cases where the physical examination remains equivocal, radiographic examination can be helpful.[5, 6, 7] Plain roentgen examination of the chest and abdomen is obtained first. The presence of localized ileus (Figure 1), the presence of roentgen signs suggestive of small bowel obstruction (Figure 2), and the presence of calcified appendiceal fecalith (Figure 3), strongly suggest the presence of acute appendicitis.

Other supporting signs may include: scoliosis of the lumbar spine to the right, or obliteration of the preperitoneal fat line or obliteration of psoas shadow on the right. If the plain roentgen examinations are inconclusive, one may safely resort to barium enema study. The presence of an extrinsic filling defect of the cecum or terminal ileum suggests the presence of acute appendicitis (Figure IV).

The barium study becomes even more important in the presence of ectopic position of the cecum and the appendix, in which case the patient will present with atypical clinical findings. Approximately 10 to 20 percent of normal appendices will not visualize during a barium enema study so that nonfilling of the appendiceal lumen with barium in the absence of associated medical findings is not diagnostic of acute appendicitis.[6] In the presence of a partially obstructed appendix, partial filling of the appendix might occur during the barium study. In the latter instance, careful clinical correlation is imperative before making any type of decision. The presence of enlarged mesenteric lymph node at the ileocolic mesentery might produce extrinsic pressure on the cecum, not unlike that of acute appendicitis (Figure V). This becomes even more pronounced if suppuration of the lymph node ensues.[8]

The white blood cell count and its differential can also be helpful in followup of patients with acute abdominal pain. Most of the patients who did not develop acute appendicitis during the period of observation did not show any shift to the left in the differential count although leukocytosis might have been present initially. In general, the white blood cell count becomes normal after 24 hours' observation. The patients who have acute appendicitis may or may not have

Figure 4. Contrast study of the colon showing an extrinsic filling defect of the cecum in a patient with acute appendicitis.

leukocytosis, but typically there is a shift to the left in the differential count. One should not make a decision for laparotomy, however, on the basis of white blood cell counts but rather correlate this with the clinical findings.

All the patients in our study who had a diagnosis of acute appendicitis confirmed at laparotomy had abdominal pain which was initially nonspecific, peri-umbilical or generalized, and eventually became localized to the lower quadrants of the abdomen, mainly on the right side.

Localized abdominal tenderness, mainly in the right lower quadrant, has been the most constant and significant finding in patients with acute nonperforated appendicitis. Rectal examination, if performed in a gentle fashion with full cooperation of the patient, can be most objective and helpful. If tenderness is elicited during rectal examination, this suggests the presence of peritoneal irritation.

The patient with a ruptured appendix has more diffuse signs and symptoms and in general there is no doubt in the diagnosis upon admission. In this study, most of the patients with ruptured appendices had symptoms lasting from 24 to 96 hours, with an average of 72 hours. There were no deaths in this group of patients, and the average hospital stay was 8 to 15 days. There were three patients in our study in whom the diagnosis was at first doubtful. These patients were checked periodically; when the signs and symptoms pointed toward localization and persistence of peritoneal irritation, laparotomy was performed within 24 hours of observation. The diagnosis was "acute appendicitis without rupture." In the presence of reasonable doubt during a period of observation, exploratory laparotomy is definitely indicated.

TABLE II
Protocol for Management of Children with Acute Abdominal Pain with a Doubtful Diagnosis

1. *Do not make a "spot" diagnosis in the emergency room.*
2. *Admit the patient to the hospital to allow him to become accustomed to the hospital environment before re-evaluation.*
3. *Mild sedation may be helpful in children who are considered to be hypersensitive.*
4. *Keep the patient N.P.O. and administer intravenous fluid.*
5. *Periodic examination and periodic white blood cell count determinations.*
6. *If the pain and abdominal tenderness improve on the first re-evaluation, the physician may wait twelve or more hours for the next evaluation.*
7. *If the pain becomes worse, but there is no localization, and the diagnosis is still doubtful, radiographic aid should be sought. A chest x-ray and obstructive series should be obtained. In extremely difficult cases, a barium enema study can be safely done.*
8. *One may consider paracentesis in some cases to rule out primary peritonitis or pancreatitis in the presence of free peritoneal fluid.*
9. *If the pain and tenderness worsen and peritoneal signs persist in the presence of reasonable doubt,* laparotomy *is indicated.*

Figure 5. Contrast study of the colon showing non-filling of the appendix and the presence of extrinsic filling defect of the appendix in a patient with suppurative mesenteric adenitis.

Conclusion

Diagnosis of acute appendicitis in doubtful cases improves with in-hospital observation. Our two year retrospective study shows that intensive in-hospital observation has prevented unnecessary laparotomies. Using the above approach, "negative" laparotomy in 5 to 10 percent or less of the cases probably would be considered ideal. In the presence of reasonable doubt during observation, however, exploratory laparotomy is still the safest course to take. □

Now, a new service for PMS members:

Announcing Memberloan a unique financial service available to members of the Pennsylvania Medical Society on a preferential basis.

This recently endorsed program provides a vital financial service that members can use to resolve any number of important financial needs.

Although complete details about the plan will be mailed to our members in the coming weeks, we want you to be aware of some of the special features and benefits of this new service.

- Memberloan is issued on your signature—there's no collateral required. The amounts available range from $5,100 to $25,000.
- The convenient one-step application/note form can be completed in the privacy of your office or home. The entire transaction is handled by mail.
- Funds advanced are on an interest bearing basis. You pay only for the money you use, while you use it.
- The preferred interest rates offered are based on the amount borrowed; you select the terms that are most convenient to you. The maturities range from 48 to 84 months. Examples of the preferential rates are shown below:

# OF MONTHLY PAYMENTS	AMOUNT FINANCED	AMOUNT OF MONTHLY PAYMENT	FINANCE CHARGE	TOTAL OF PAYMENTS	ANNUAL PERCENTAGE RATE
84	$25,000	$468.50	$14,354.00	$39,354.00	14%
72	18,000	370.90	8,704.80	26,704.80	14%
60	12,000	279.21	4,752.60	16,752.60	14%
48	6,000	166.98	2,015.04	8,015.04	15%
48	5,100	144.53	1,837.44	6,937.44	16%

- There are no prepayment penalties—you pay off your Memberloan any time you wish and, you can reduce total finance charges by repaying more than the monthly payment at any time.
- Credit life insurance (up to a maximum of $10,000) is included at no additional cost for members under age 66.

Memberloan Plan is serviced by Commercial Credit Corporation, one of the nation's leading consumer finance companies and a major lender to business and industry.

Be sure to look for complete details of the program in the mail. If your financial needs are immediate, please complete the coupon below and mail it today. Your one-step application/loan note form will be promptly sent to you.

Judith S. Mausner, M.D., Melrose Park, was promoted recently to professor of epidemiology in the department of immunity and preventive medicine at the Medical College of Pennsylvania. Formerly associate professor of epidemiology at the medical college, Dr. Mausner is a lecturer in the department of Community Medicine at Hahnemann Medical College and an adjunct associate professor in the department of research medicine at the University of Pennsylvania School of Medicine.

Frederick R. DeRubertis, M.D., has been promoted to associate professor of medicine at the University Health Center of Pittsburgh. Dr. DeRubertis, a member of the faculty of the University of Pittsburgh School of Medicine, is chief of endocrinology at the Veterans Administration Hospital in Pittsburgh.

MDs in the news

Frank I. Marlowe, M.D., Wynnewood, was recently elected to a two year term as president of the Philadelphia Society of Facial Plastic Surgeons. Dr. Marlowe is associate professor of otolaryngology and a member of the department of surgery of the Medical College of Pennsylvania.

DR. MARLOWE

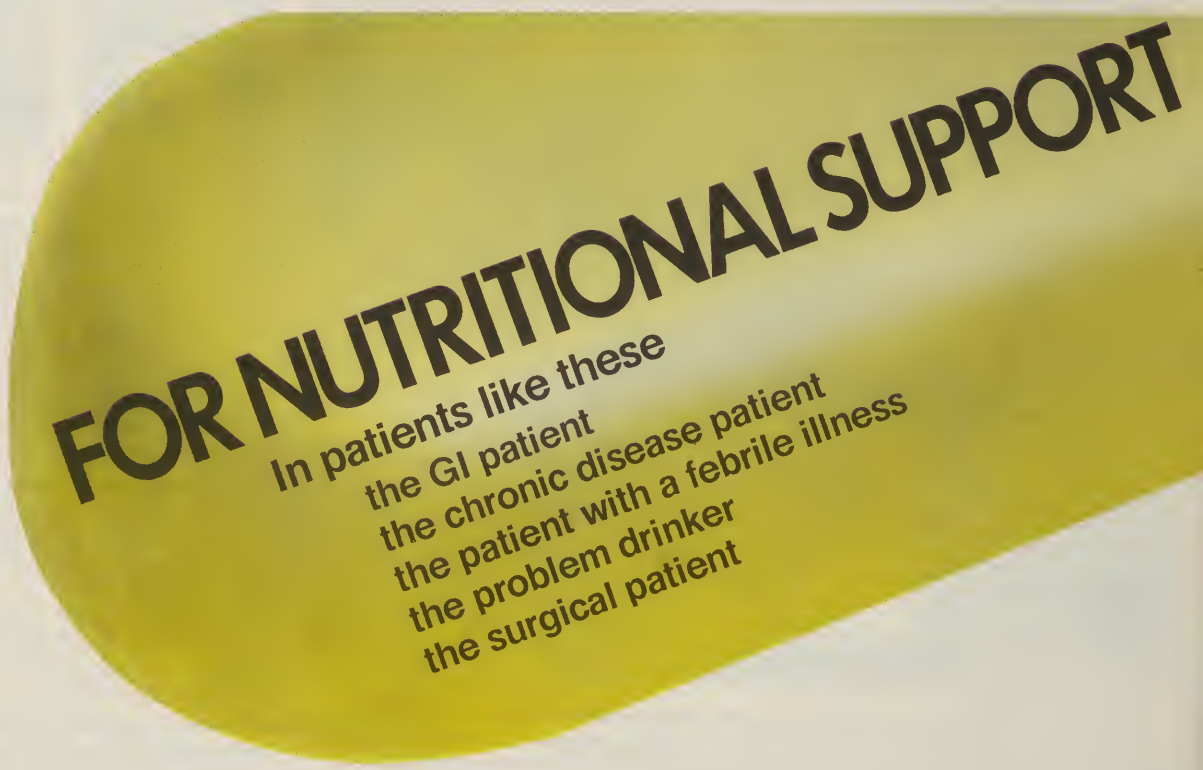
DR. GINSBERG

David K. Ginsberg, M.D., was appointed recently as chairman of the department of medicine at Methodist Hospital, Philadelphia. A member of the hospital's medical staff since 1960, Dr. Ginsberg is former associate director of medical service and chief of the department of gastroenterology.

David C. Bush, M.D., was appointed recently as an associate in the department of orthopaedic surgery at the Geisinger Medical Center, Danville. Prior to his appointment at Geisinger, Dr. Bush was an orthopedic and hand surgeon at the Second General Hospital, U.S. Army, Landstuhl, Germany. He is the son of the late **Leonard F. Bush, M.D.,** who had organized and directed Geisinger's department of orthopedic surgery and later became executive director, retiring in 1974.

The Washington County Medical Society recently honored **J. W. G. Hannon, M.D.,** Washington, and **Frank D. Hazlett, M.D.,** formerly of Washington, for fifty years in the practice of medicine. Dr. Hannon practices preventive medicine and is medical director of the Jessop Steel Company and subsidiaries. Dr. Hazlett, retired from active practice, is a past president of the Washington County Medical Society.

Seniors at Jefferson Medical College, Thomas Jefferson University, have the opportunity to get first hand experience in primary care in a rural area. The college's department of family medicine has offered the federally funded rural preceptorship program since 1972 to help alleviate the nation's shortage of doctors in rural communities. According to Howard Rabinowitz, M.D., program coordinator, "The overall goal . . . has been to give the student real life experience working with skillful primary care practitioners in a rural area" in order to reinforce the student's commitment to rural primary care. The fact that more than half of Jefferson's 212 graduates this year have entered primary care residencies indicates that the university's efforts have been worthwhile.



ROCHE

Balanced high potency
B-complex and 500 mg Vitamin C
Virtually no odor or aftertaste
Economically priced

BEROCCA® IS THERAPY
TABLETS
℞ only

Please see complete product information, a summary of which follows:

Each Berocca Tablet contains:
Thiamine mononitrate (Vitamin B_1) . 15 mg
Riboflavin (Vitamin B_2) . . . . . 15 mg
Pyridoxine HCl (Vitamin B_6) . . . . . 5 mg
Niacinamide . . . . . 100 mg
Calcium pantothenate . . . . . 20 mg
Cyanocobalamin (Vitamin B_{12}) . . . . . 5 mcg
Folic acid . . . . . 0.5 mg
Ascorbic acid (Vitamin C) . . . . . 500 mg

Indications: Nutritional supplementation in conditions in which water-soluble vitamins are required prophylactically or therapeutically.

Warning: Not intended for treatment of pernicious anemia or other primary or secondary anemias. Neurologic involvement may develop or progress, despite temporary remission of anemia, in patients with pernicious anemia who receive more than 0.1 mg of folic acid per day and who are inadequately treated with vitamin B_{12}.

Dosage: 1 or 2 tablets daily, as indicated by clinical need.

Available: In bottles of 100 and 500.

Torrance State Hospital's new building was dedicated recently to Saul Greizman, M.D., clinical director, during a ceremony attended by about 700 citizens, government officials, and educational leaders from western Pennsylvania. Anna Belle Calloway, deputy secretary of welfare for the western region, reviewed Dr. Greizman's 39 year career at Torrance, which he began as a staff physician in 1937, later serving as clinical director 1946 to 1969 and acting superintendent 1969 to 1975. Ms. Calloway, speaking for Governor Milton J. Shapp and Welfare Secretary Frank S. Beal, explained the naming of the Greizman Building: "Dr. Greizman, as a reminder of your complete dedication of yourself to humanity, the mentally disabled of the many counties surrounding Westmoreland, we honor you. . . ."

Three physicians at Sacred Heart Hospital, Norristown, recently assumed positions as department chiefs. They are: **Joseph Bender, M.D.,** chief of medicine; **James O'Brien, M.D.,** chief of cardiology; and **Lee L. Konecke, M.D.,** chief of diagnostic cardiology.

HENRY L. BOCKUS, M.D., center, was the recipient of the 1977 Roth Associates Award at a recent benefit dinner for the Institute of Gastroenterology of the Presbyterian-University of Pennsylvania Medical Center. Dr. Bockus has practiced medicine for over 55 years and is one the nation's top gastroenterologists. Among his contributions are: the editing of a four-volume text which is a standard reference work on gastroenterology; and helping to found the American Board of Internal Medicine and its subspecialty board of gastroenterology. Since 1931 Dr. Bockus has been associated with the University of Pennsylvania's Graduate School of Medicine, serving as chairman of the department of medicine from 1949 to 1960. With Dr. Bockus at the presentation were James L. A. Roth, M.D., right, director of the Institute of Gastroenterology, and Vincent Kling, honorary chairman of the event.

5th SYMPOSIUM

CURRENT DIAGNOSTIC METHODS IN CARDIOLOGY

Deborah Heart and Lung Center

Browns Mills, New Jersey

PROGRAM

Four sessions, with panel discussions, including: Exercise Testing . . . Holter Monitoring . . . Ventricular Asynergy . . . HIS Bundle Recording . . . Swan-Ganz Clinical Application . . . Isotope Stress Testing . . . Myocardial Imaging . . . CT Scanning . . . Echocardiography . . .

This program is acceptable for:
11 Hours Credit, Category 1, Physicians Recognition Award, American Medical Association.

12 Hours Prescribed Credit, American Academy of Family Physicians.

12 Hours Credit (Class 2), American College of General Practitioners in Osteopathic Medicine and Surgery.

Admission free to residents, fellows, interns, medical students and nurses.

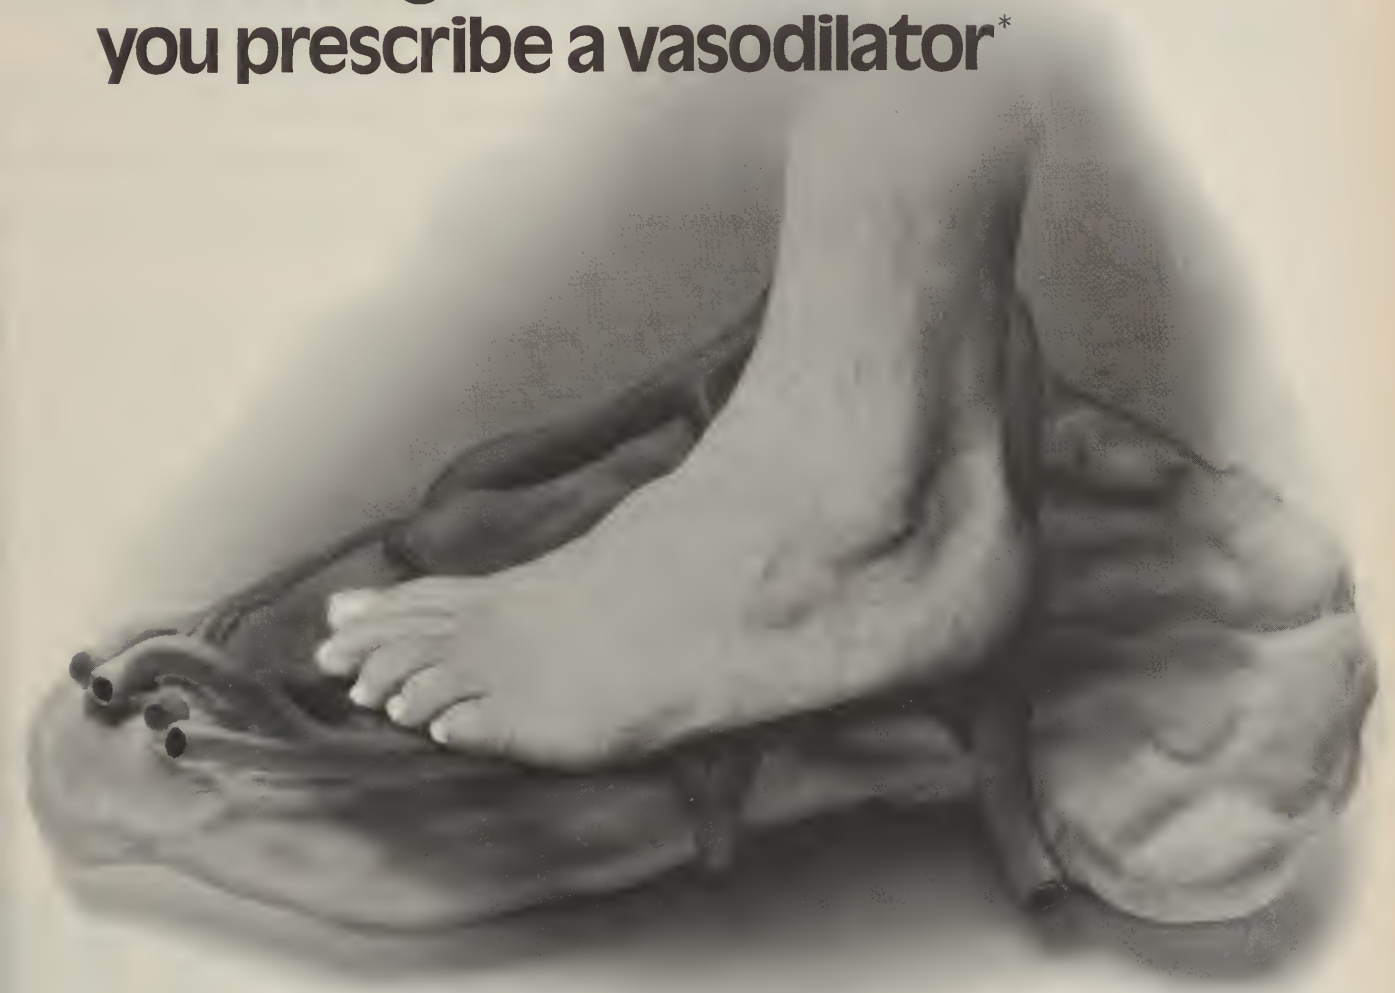
Cherry Hill Inn, Cherry Hill, New Jersey

November 11-12, 1977

Registration fee: $100
(includes CME certificate, luncheon on both days)

For full program, write to:
Deborah Heart and Lung Center Symposium,
P.O. Box 425, Ardmore, Pa. 19003

consider the effect on coexisting diabetes when you prescribe a vasodilator*



(POSTERIOR VIEW OF PANCREAS)

no interference in the management of the diabetic patient has been reported with

VASODILAN® (ISOXSUPRINE HCl)

the compatible vasodilator TABLETS, 20 mg.

***Indications:** Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.
Vasodilan injection, isoxsuprine HCl, 5 mg., per ml.

Dosage and Administration: Oral: 10 to 20 mg., three or four times daily.

Intramuscular: 5 to 10 mg.(1 or 2 ml.) two or three times daily. Intramuscular administration may be used initially in severe or acute conditions.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Parenteral administration is not recommended in the presence of hypotension or tachycardia.

Intravenous administration should not be given because of increased likelihood of side effects.

Adverse Reactions: On rare occasions oral administration of the drug has been associated in time with the occurrence of hypotension, tachycardia, nausea, vomiting, dizziness, abdominal distress, and severe rash. If rash appears the drug should be discontinued.

Although available evidence suggests a temporal association of these reactions with isoxsuprine, a causal relationship can be neither confirmed nor refuted.

Administration of single dose of 10 mg. intramuscularly may result in hypotension and tachycardia. These symptoms are more pronounced in higher doses. For these reasons single intramuscular doses exceeding 10 mg. are not recommended. Repeated administration of 5 to 10 mg. intramuscularly at suitable intervals may be employed.

Supplied: Tablets, 10 mg., bottles of 100, 1000, 5000 and Unit Dose; Tablets, 20 mg., bottles of 100, 500, 1000, 5000 and Unit Dose; Injection, 10 mg. per 2 ml. ampul, box of six 2 ml. ampuls.

President Hails 'Great Instrument of Peace,' Insists It Be Used

HISTORIC LANDMARK

Meeting Gives Standing Ovation as Executive Pictures Peace Gain

"If we fail to use it," he declared to the solemn final meeting of the delegates, 'we shall betray all of those who have died in order that we might meet here in freedom and safety to create it.'

"If we seek to use it selfishly—for the advantage of any one nation or any small group of nations—we shall be equally guilty of that betrayal."

Fervent Interpolation

The President, speaking in the auditorium of the War Memorial Opera House, built in memory of sons of the Golden Gate city who gave their lives in the first World War, in which he himself served, seemed to give unconscious expression to the solemn feeling of the occasion when, at the outset of his speech, he interpolated the words, half a hope, half a prayer:

"Oh, what a great day this can be in history!"

Just before the plenary session

IGNE

the Draf Ends No

WASHINGTON, Jan. 27, 1973—"With the signing of the peace agreement in Paris today, and after receiving a report from the Secretary of the Army that

PATIENT PACKAGE INSERTS: A CONCEPT WHOSE TIME HAS COME?

The consumer's right to know is an irreversible and desirable trend of the Seventies. It extends, and properly, to a patient's right to know more about his or her prescription medications. One way, gaining favor, is through patient package inserts. Wisely-prepared and properly distributed when medically indicated, they could markedly improve patient knowledge and drug therapy—laudable goals by anyone's standards.

The PMA endorses these goals and will work with government, the health professions and consumers to achieve them.

The Advantages

The concept holds promise of benefits: better patient understanding of the product prescribed, better adherence to the treatment plan, and more awareness of possible side reactions.

Every doctor has had patients who fail to finish antibiotic regimens because they feel better. Some patients assume that if one tranquilizer or analgesic is good, two may be twice as good. Still others fail to report dizziness while on antihypertensive therapy —and so on.

Problems like these might arise less often if the patient received written information in addition to verbal instructions. Some studies suggest that patients are more receptive to such materials, and they more often understand the verbal instructions and follow them, when inserts are used.

The Disadvantages

There are also some potential problems. Obviously, the inserts must be clearly phrased, without extraneous or complex detail. How much information is enough? How can it be kept current? Should all patients receive the same information? Should inserts be included with all drugs? Should only potential problems be listed or are patients better off with a "fair balance" presentation that describes usefulness as well as drawbacks?

These and similar questions require answers, since model inserts have yet to be properly developed and tested. Despite the need for these studies, the FDA is proceeding prematurely with inserts on selected products. We think the Congress is the only place where the matter can be given the proper legal status and direction, particularly since it represents a conceptual change in the legal, medical and social framework of the nation's prescription drug information system.

The Solution

The PMA believes that carefully-devised pilot studies of various kinds of inserts are needed. They should be developed and implemented with full participation by doctors, pharmacists, consumers, communications experts and the drug industry. Such studies will provide reliable pathways to follow, so that inserts will be useful aids to medical practice.

And particularly we think that you should be closely involved in this debate and in these studies and decisions. Otherwise, people with less experience and qualifications may control the purposes, content and use of a tool with considerable promise for improved patient care. It could make a difference in your practice tomorrow, and more importantly, in the health of your patients.

LIPO-NICIN

A PERIPHERAL VASODILATOR

IMMEDIATE or GRADUAL

nicotinic acid therapy

IMMEDIATE RELEASE

LIPO-NICIN/100 mg.
Each blue tablet contains:
Nicotinic Acid .....100 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) .... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 5 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

LIPO-NICIN/250 mg.
Each yellow tablet contains:
Nicotinic Acid .....250 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) .... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

GRADUAL RELEASE

LIPO-NICIN/300 mg.
Each time-release capsule contains:
Nicotinic Acid .....300 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (H-1) .. 25 mg.
Riboflavin (B-2) .... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
In a special base of prolonged therapeutic effect.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500.

Indications: For use as a vasodilator in the symptoms of cold feet, leg cramps, dizziness, memory loss or tinnitus when associated with impaired peripheral circulation. Also provides concomitant administration of the listed vitamins. The warm tingling flush which may follow each dose of LIPO-NICIN 100 mg. or 250 mg. is one of the therapeutic effects that often produce psychological benefits to the patient. **Side Effects:** Transient flushing and feeling of warmth seldom require discontinuation of the drug. Transient headache, itching and tingling, skin rash, allergies and gastric disturbance may occur. **Contraindications:** Patients with known idiosyncrasy to nicotinic acid or other components of the drug. Use with caution in pregnant patients and patients with glaucoma, severe diabetes, impaired liver function, peptic ulcers, and arterial bleeding.

APATHY • IRRITABILITY
FORGETFULNESS • CONFUSION

Cerebro-Nicin® CAPSULES

A GENTLE CEREBRAL STIMULANT & VASODILATOR FOR GERIATRIC PATIENTS

Each CEREBRO-NICIN capsule contains:
Pentylenetetrazole .....100 mg. • Nicotinic Acid ...100 mg.
Ascorbic Acid .....100 mg. • Thiamine HCl .....25 mg.
l-Glutamic Acid .....50 mg. • Niacinamide .....5 mg.
Riboflavin .....2 mg. • Pyridoxine HCl .....3 mg.
AVAILABLE: Bottles 100, 500, 1000
SIDE EFFECTS: Most persons experience a flushing and tingling sensation after taking a higher potency nicotinic acid. As a secondary reaction some will complain of nausea, sweating and abdominal cramps. The reaction is usually transient.
INDICATIONS: As a cerebral stimulant and vasodilator.
RECOMMENDED GERIATRIC DOSAGE: One capsule three times daily adjusted to the individual patient.
WARNING: Overdosage may cause muscle tremor and convulsions.
CONTRAINDICATIONS: Epilepsy or low convulsive threshold.
CAUTION: Federal law prohibits dispensing without prescription. Keep out of reach of children.

New Study Just Released!

Important information for physicians about generics

Latest National Survey* Reports:
Pharmacists again prefer

PUREPAC

Over every other generic manufacturer.

There are 5 major national drug manufacturers with generic lines: Purepac, Pfizer, Lederle, Parke-Davis and SmithKline, but only Purepac manufactures more of its generic products—in its own plants, than any of the other 4.

Purepac's is the most complete of all these national generic lines, and Purepac's prices are more economical.

Now that many states have repealed their anti-substitution law, you can help reduce your patients prescription costs with quality generics. Prescribe Purepac, or request your pharmacists to dispense the Purepac brand.

Bio-availability data of Purepac manufactured pharmaceuticals and Generic Reference Chart are yours upon request.

*The November 1976 study by American Druggist Magazine reconfirms Purepac leadership over every other generic manufacturer.

Copies of this study, and Purepac's Annual Report are available.

Manufacturers of Fine Pharmaceuticals for Over 48 Years

AMERICA'S LEADING NATIONAL BRAND OF GENERICS

Psychiatric hospitalization of the prominent individual...

often presents unusual treatment challenges. Clinical experience suggests that prominent patients and members of their families are best treated in a highly individualized and comfortable therapeutic environment.

Springwood at Leesburg, a 30-bed private psychiatric hospital, has been designed to treat this special patient population (including physicians, corporate executives, and high-level government officials). The new hospital, situated on an historic 45 acre estate in Loudoun County, Virginia, is located 35 miles west of Washington, D.C.

Referring physicians are invited to participate in planning the patient's hospital care program, and always play an important role in discharge planning.

Fifth Annual Friends Hospital Clinical Conference

ADULT LIFE DEVELOPMENT

Predictable Crises and Clinical Management

October 27 and 28, 1977

Friends Hospital, Philadelphia,

Presented by Friends Hospital in cooperation with the Department of Mental Health Sciences of Hahnemann Medical College and Hospital

Thursday, October 27

Morning

"Stress, Adaptation and Growth in the Adult Years: An Exploration of Normative Development" - Rachel D. Cox, Ph.D.

"Evolution of Adult Consciousness" - Roger Gould, M.D.

Discussant: Carola Mann, Ph.D. - "Mid-Life Issues: Psychodynamics of Mid-Life Changes"

Afternoon

"Normative and Eruptive Crises of the Adult Life Span: Coping and Helpseeking Responses" - Morton A. Lieberman, Ph.D.

Panel Discussion: Morton A. Lieberman, Ph.D. - Moderator (Rachel D. Cox, Ph.D., Roger Gould, M.D.)

Evening

Dinner Address - "The Crucial Transition: Adolescent to Adult" - Theodore Lidz, M.D.

Friday, October 28

Morning

"Depression and Adult Life Development" - Silvano Arieti, M.D.

"Psychosis and Adult Life Development" - Malcolm Bowers, M.D.

"Adult Developmental Stages and Marital Interaction" - Ellen Berman, M.D.

Discussant: Theodore Lidz, M.D.

Afternoon

"Adult Psychosexual Development and Problems" - Harold I. Lief, M.D.

Panel Discussion: Richard E. Hicks, M.D., Moderator (Silvano Arieti, M.D., Ellen Berman, M.D., Theodore Lidz, M.D.)

Advance registration fee of $85.00 (payable to Friends Hospital) includes lunches at Friends Hospital both days and dinner Thursday evening at the Marriott Motor Hotel. Category I credit.

If you have a problem call your representative collect for assistance: (717) 238-1635.

Anesthesiologist—Board Certified or Board Eligible for in-hospital emergency call. Only weekends (44 per year). To be considered as full time employment. Contact A. Merkin, M.D., (215) 785-6301 or 785-1211.

Be the Doctor You Want to Be—Today, Navy Medicine gives you the opportunity to be the doctor you want to be. We offer a challenging practice with a minimum of administrative overhead. Plus excellent facilities and support personnel. In addition, a Navy practice gives you time to spend with your family. Associate with other highly motivated physicians. Further your schooling. Even enjoy 30 days' paid vacation every year. No malpractice insurance required. All this, plus a starting salary of $30,000 or more a year, depending on your experience. For more information, contact: Navy Medical Programs, P.O. Box 946, Harrisburg, PA 17108; or call collect to (717) 782-3984.

Psychiatrist, Board Certified or Board Eligible—Mental hospital in metropolitan area. Easy access to New York, Philadelphia, and close to Pocono resort area. Good salary with excellent fringe and retirement benefits. Pennsylvania license required. Contact: Henry Buxbaum, M.D., Superintendent, Clarks Summit State Hospital, Clarks Summit, PA 18411; telephone (717) 586-2011.

House Staff Physician—Excellent opportunity for a *Pennsylvania licensed* physician to serve in a responsible position of a modern suburban Philadelphia, 286 bed hospital. JCAH accredited. $30,000 per year plus vacation, sick leave, paid pension plan, hospitalization, malpractice insurance, and disability insurance. Some evening and night duty required. For further information, contact John F. Dunleavy, Assistant Administrator, Holy Redeemer Hospital, Meadowbrook, PA 19046; telephone (215) 947-3000.

Pennsylvania and New Jersey Emergency Medicine positions available with fee-for-service group in suburban Philadelphia, central and eastern Pennsylvania, Pittsburgh, and northern and southern New Jersey hospitals. Physician directors also wanted. Send resume to: Northeast Emergency Medical Association, 500 Spruce St., Philadelphia, PA 19106; (215) 925-3511.

Board Eligible or Certified Internist—To join in hospital based practice in Palmerton, Pennsylvania; independent association with two internists. Comfortable, well-run community; with pool, tennis, excellent fishing and hunting area, camping, and boating. Town 6500; rural drawing area 25,000. Good schools and recreational facilities, ½ hour to urban center of 300,000, providing rapid subspecialty consultation and major specialty surgery; 2 hours to Philadelphia and New York. In foothills of Pocono Mountains and very near state/federal recreation areas. Long-established, accredited, 80 bed, open staff hospital in new building, housing medical, surgical, obstetrics-gynecology, nursery, pediatrics, intensive care, and emergency room. Specialty services directed by either board certified or board eligible physicians. Rent free first year, added incentive assurance of first year income during establishment of practice. Address inquiries to Dr. E. S. P. Cope or Dr. L. E. Leshock, Palmerton Hospital, Palmerton, PA 18071.

POSITIONS WANTED

General Surgeon—35 years, Board Certified, Pennsylvania license. Prefers medium to small community. Will do some general practice also if necessary. Write Department 760, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Physician Assistant—Nationally certified and experienced, seeks employment in rural, semi-rural area. Contact Richard Myers, 640 Main St., Branford, CT 06405.

FOR RENT

Office Space For Lease—In new Spring Garden Health Center. Will finish to your specifications. Easy access, excellent parking. Call Charles P. Selcher, (717) 944-1207, for appointment, or write 750 Spring Garden Drive, R.D.1, Middletown, PA 17057.

Space in Fort Washington-Ambler Area Professional Center—Specialties or general practice; 4 treatment rooms, laboratory, dark room, business office, waiting room, consultation room. Primary or secondary office, furnished or unfurnished, shared lease possible. (215) 646-1665.

MISCELLANEOUS

Postgraduate Course In Acupuncture—By The New York Society of Acupuncture for Physicians and Dentists, Inc. December 7-11, 1977. The course is organized to meet the new curriculum requirements of the New York State Boards for Medicine and Dentistry and approved for 50 credit hours. Barbizon Plaza Hotel, 58th and 6th Ave., New York City. For application please write Dr. S. J. Yue, 115 E. 61 St., New York, NY 10021. Phone mornings (212) 245-4737, or after 6:00 p.m. or all day Sunday.

The Hand: Form and Function—Sponsored by the Occupational Therapy Department, University of Pennsylvania, November 10-13, 1977, at the Hilton Hotel, Philadelphia. The course will provide an overview of the fundamental concepts of anatomy, evaluation, splinting, and treatment techniques employed in the restoration of hand function. Two splinting laboratories will give an understanding and appreciation of custom fabrication. Faculty will include hand surgeons, physiatrists, psychiatrists, physical and occupational therapists in specialty areas. Deadline for registration is October 15, 1977. For further information contact: Josephine Cohen, MA, OTR, SAMP, Dept. Occupational Therapy, University of Pennsylvania, 420 Service Dr./SX, Philadelphia, PA 19104.

Biomedical Electronics Service—Repairs medical, laboratory, and other electronic equipment. Will install and remove x-ray equipment. Walker Electronics®, 117 Sylvan Terrace, Harrisburg, PA 17104; telephone (717) 233-4716.

CLASSIFIED ADVERTISING INFORMATION

Rates—$12.00 per insertion up to 30 words; 50 cents each additional word; $1.00 per insertion for answers sent in care of Pennsylvania Medical Society. Payable in advance.

COPY DEADLINE—Copy due by the first day of month preceding month of publication. Send to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pennsylvania 17043. The right is reserved to reject or modify copy to conform with publication rules.

DEPARTMENT NUMBERS—Advertisers using department numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers.

WORD COUNT—Count as one word all single words, two initials of a name, each abbreviation, isolated numbers, groups of numbers, hyphenated words. Count name and address as five words, telephone numbers as one, and "Write Department . . ., PENNSYLVANIA MEDICINE" as five.

THE ANXIETY-SPECIFIC.

- a predictable pattern of patient response
- seldom associated with serious side effects, in proper dosage
- rarely interferes with mental acuity
- used concomitantly with many primary medications
- three dosage strengths meet most patient needs

LIBRIUM® Ⓒ IV

chlordiazepoxide HCl/Roche

5mg, 10mg, 25mg capsules

Libritabs® (chlordiazepoxide) available in 5 mg, 10 mg and 25 mg tablets.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Relief of anxiety and tension occurring alone or accompanying various disease states.

Contraindications: Patients with known hypersensitivity to the drug.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

***Usage in Pregnancy:* Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Usual Daily Dosage: Individualize for maximum beneficial effects. *Oral—Adults:* Mild and moderate anxiety and tension, 5 or 10 mg *t.i.d.* or *q.i.d.*; severe states, 20 or 25 mg *t.i.d.* or *q.i.d. Geriatric patients:* 5 mg *b.i.d.* to *q.i.d.* (See Precautions.)

Supplied: Librium® (chlordiazepoxide HCl) *Capsules,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500; Tel-E-Dose® packages of 100, available in trays of 4 reverse-numbered boxes of 25, and in boxes containing 10 strips of 10; Prescription Paks of 50, available singly and in trays of 10. Libritabs® (chlordiazepoxide) *Tablets,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500. With respect to clinical activity, capsules and tablets are indistinguishable.

THE ANXIETY-SPECIFIC.

Since its discovery in the research laboratories at Roche, Librium has been the object of ongoing pharmacologic and clinical investigation.

The published record on Librium is enormous. So large, in fact, we put it into a computer literature retrieval system to make it more accessible in answering your inquiries.*

It's a record that reveals a consistent pattern of patient response. A highly favorable benefits-to-risk ratio. And minimal interference with many primary medications.

Doing one thing well. Basically, that's what Librium is all about.

LIBRIUM® ℞
chlordiazepoxide HCl/Roche

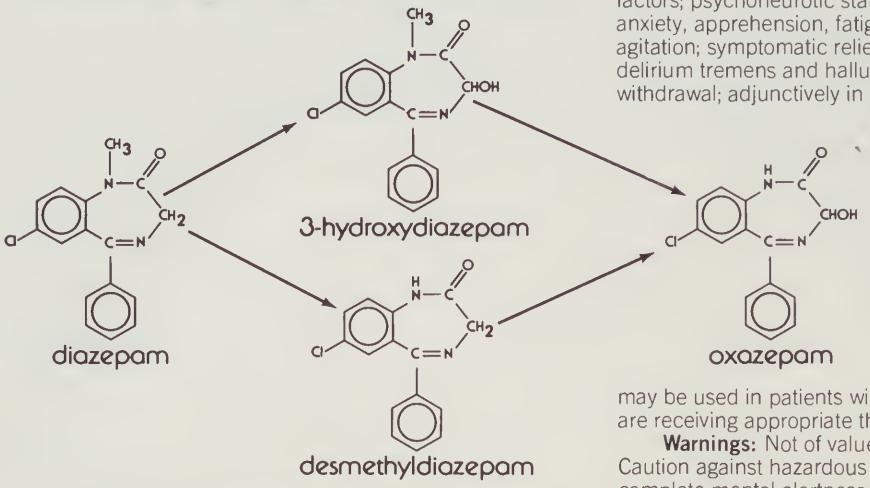
A pharmacokinetic character all its own



Valium (diazepam) is a benzodiazepine with a distinctive pharmacokinetic profile

The pharmacokinetic profile of Valium is one of the characteristics that sets it apart from other benzodiazepines. Consider, in particular, the metabolic pathway of Valium. The three major metabolites of Valium exhibit significant pharmacologic activity—and so, of course, does the parent substance—diazepam itself. All combine to produce the characteristic clinical response seen with Valium. The response you have come to know, to want and to trust.

Pharmacokinetic studies also demonstrate that Valium has a pattern of absorption, distribution, metabolism and elimination that is reliable and consistent. And, although the pharmacokinetics of a drug cannot, at present, be specifically related to its clinical effects, it is clearly a factor that distinguishes one product from another by providing important insights into how each moves through the patient's body.

Valium® (diazepam) (IV)

2-mg, 5-mg, 10-mg scored tablets

a prudent choice in psychic tension and anxiety

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology; spasticity caused by upper motor neuron disorders; athetosis; stiff-man syndrome; convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

SOCIETY'S COMPANY TO REPLACE ARGONAUT The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) is scheduled to replace Argonaut Insurance Co. in the existing master contract and will begin writing policies for physicians now insured by Argonaut January 1, 1978. Clearance for the activation of PMSLIC came at a meeting of the Society's Board of Trustees September 13 when an agreement was made with Argonaut to settle all outstanding litigation. Financing for PMSLIC will come from a one-time mandatory assessment of all Society members and a one-time selective assessment, graduated according to risk classification, on all policyholders. Bills were mailed the first week in October. Active members will pay $250; senior active members, $125; and residents, $25. In addition, policyholders will pay from $385 for Class I insureds to $2,625 for Class V insureds. The $8 million produced by the assessments must be invested in PMSLIC by December 1, 1977 for the settlement agreement to become effective, so all members have been urged to pay the assessment immediately. Details were explained in a September 28 letter to all members from Society President William J. Kelly, M.D.

SPECIALTY SOCIETIES IN FIELD CONTACT SERVICE The Board of Trustees has expanded the Society's field contact service, originally established to provide liaison for component county societies, to include specialty societies within the state. Field contact staff personnel have been assigned as follows:

Specialty Society	Staff Person Assigned
Pennsylvania Section, American College of OB/GYN	L. Riegel Haas
Pennsylvania Orthopedic Society	Charles Appleby
Pennsylvania Association of Clinical Pathologists	Patti Adami
Pennsylvania Chapter of the American Academy of Pediatrics	Barbara Starr
Pennsylvania Academy of Ophthalmology and Otolaryngology	Donna Wenger
Pennsylvania Academy of Surgery	Donna Wenger
Pennsylvania Society of Internal Medicine	James Paxton
Pennsylvania Allergy Association	Brad Langdon
Pennsylvania Society of Colon and Rectal Surgery	Patti Adami
Pennsylvania Academy of Dermatology	Dale Yates
Pennsylvania Academy of Family Physicians	James Paxton
Pennsylvania Academy of Physical Medicine and Rehabilitation	Dale Yates
Pennsylvania Radiological Society	Brad Langdon
Pennsylvania Association for Thoracic Surgery	Donald McCoy

STATE SOCIETY TO HAVE LAWYER IN RESIDENCE The Board of Trustees has authorized Executive Vice President John F. Rineman to take steps to employ a lawyer as a full time member of the staff.

DELEGATES TO CONSIDER SOCIETY STRUCTURE Up for consideration by the House of Delegates at the Annual Meeting October 25-27 will be recommendations from the Board of Trustees that three committees be abolished. They are the Committees on Discipline; Medicine, Religion, and Bioethics; and Relations between Medicine and Osteopathy. The Board is recommending a re-evaluation of the Society's disciplinary procedures. A new commission of the Council on Education and Science is being recommended to fill the function of the Committee on Medicine, Religion, and Bioethics.

DELEGATES TO MAKE MAJOR DECISIONS Society finances and a dues increase (see page 6), launching of PMSLIC, Society structure, legislative priorities, the relationship between PMS and Blue Shield, and mandatory AMA membership are issues for discussion and decision when the Society's House of Delegates meets in Lancaster October 25-27. Reference committee hearings will be held the afternoon of October 25. All members of the Society are welcome to attend and speak at the hearings. The following resolutions were introduced early enough for printing in the Official Reports Book.

77-1 Establishment of a legal division within the Pennsylvania Medical Society (Berks County)

77-2 Reinstatement of Associate Member as a full member (Lehigh County)

77-3 Standards of informed consent established by the specialty societies (Mercer County)

77-4 Establishment by Blue Shield of updated and equitable physician payment schedules (Philadelphia County)

77-5 AMA assistance to PSROs in locating suitable corporate liability insurance (Westmoreland County)

77-6 Consultation by Blue Shield with specialty societies' advisory committees before declaring procedures obsolete

77-7 Consultation by Blue Shield with specialty societies to obtain a list of individuals from which to choose Blue Shield medical advisors

77-8 Urging Blue Shield and other carriers to find a new mechanism for concurrent and ongoing fee updates

MERGING OF STATE BOARDS 'A POSSIBILITY' The possibility of a merger of the State Board of Medical Education and Licensure and the State Board of Osteopathic Examiners was discussed at the September 9-10 meeting of the medical board in Erie. The two boards have scheduled future meeting dates to coincide, "allowing for continuing dialogue," said Richard C. Lyons, M.D., medical board chairman.

DOLLARS INJECTED TO MEASLES IMMUNIZATION PLANS Federal monies have been made available for measles immunization programs nationwide as statistics show the incidence of measles is up 60 percent this year over 1976. Pennsylvania expects at least $600,000 to continue the immunization program begun last spring in school districts throughout the Commonwealth. Secretary of Health Leonard Bachman, M.D., said the number of cases in 1977 is 600 more than last year at the same time. The Department of Health is targeting those school districts which have not participated in the special program. Measles immunization is recommended for: (1) all persons immunized before 12 months of age; (2) healthy children beyond the age of 15 months who have not had measles or measles vaccine; (3) persons who have not had measles but were immunized prior to 1965; and (4) persons who have not had measles but were immunized with a killed rather than live vaccine.

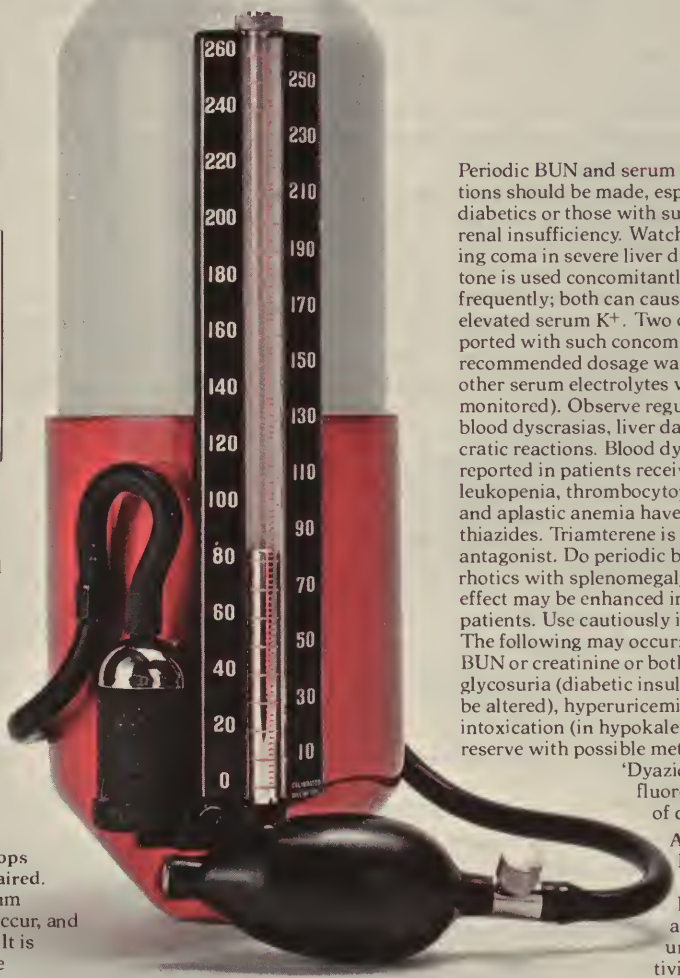
PENNSYLVANIA MEDICINE, established in 1897, is published monthly as the official publication of the Pennsylvania Medical Society. All original papers and correspondence should be directed to the Managing Editor. Subscription requests and changes of address should be sent to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa 17043. A subscription is $5.00 per year. Single issues are 50 cents. Second class postage is paid at Lemoyne, Pennsylvania 17043.

TRIAMTERENE CONSERVES POTASSIUM WHILE HYDROCHLOROTHIAZIDE LOWERS BLOOD PRESSURE

DYAZIDE®

Each capsule contains 50 mg. of Dyrenium® (triamterene, SK&F Co.) and 25 mg. of hydrochlorothiazide.

MAKES SENSE



Before prescribing, see complete prescribing information in SK&F Co. literature or PDR. A brief summary follows:

* **Warning**
This drug is not indicated for initial therapy of edema or hypertension. Edema or hypertension requires therapy titrated to the individual. If this combination represents the dosage so determined, its use may be more convenient in patient management. Treatment of hypertension and edema is not static, but must be reevaluated as conditions in each patient warrant.

* **Indications:** When the combination represents the dosage determined by titration: Adjunctive therapy in edema associated with congestive heart failure, hepatic cirrhosis, the nephrotic syndrome. Corticosteroid and estrogen-induced edema, idiopathic edema; hypertension, when the potassium sparing action of triamterene is warranted. (See Box Warning.) Routine use of diuretics in healthy pregnant women is inappropriate; they are indicated in pregnancy only when edema is due to pathological causes.

Contraindications: Further use in anuria, progressive renal or hepatic dysfunction, hyperkalemia. Pre-existing elevated serum potassium. Hypersensitivity to either component or other sulfonamide-derived drugs.

Warnings: Do not use potassium supplements, dietary or otherwise, unless hypokalemia develops or dietary intake of potassium is markedly impaired. If supplementary potassium is needed, potassium tablets should not be used. Hyperkalemia can occur, and has been associated with cardiac irregularities. It is more likely in the severely ill, with urine volume less than one liter/day, the elderly and diabetics with suspected or confirmed renal insufficiency. Periodically, serum K^+ levels should be determined. If hyperkalemia develops, substitute a thiazide alone, restrict K^+ intake. **Associated widened QRS complex or arrhythmia requires prompt additional therapy.** Thiazides cross the placental barrier and appear in cord blood. Use in pregnancy requires weighing anticipated benefits against possible hazards, including fetal or neonatal jaundice, thrombocytopenia, other adverse reactions seen in adults. Thiazides appear and triamterene may appear in breast milk. If their use is essential, the patient should stop nursing. Adequate information on use in children is not available.

Precautions: Do periodic serum electrolyte determinations (particularly important in patients vomiting excessively or receiving parenteral fluids). Periodic BUN and serum creatinine determinations should be made, especially in the elderly, diabetics or those with suspected or confirmed renal insufficiency. Watch for signs of impending coma in severe liver disease. If spironolactone is used concomitantly, determine serum K^+ frequently; both can cause K^+ retention and elevated serum K^+. Two deaths have been reported with such concomitant therapy (in one, recommended dosage was exceeded, in the other serum electrolytes were not properly monitored). Observe regularly for possible blood dyscrasias, liver damage, other idiosyncratic reactions. Blood dyscrasias have been reported in patients receiving triamterene, and leukopenia, thrombocytopenia, agranulocytosis, and aplastic anemia have been reported with thiazides. Triamterene is a weak folic acid antagonist. Do periodic blood studies in cirrhotics with splenomegaly. Antihypertensive effect may be enhanced in post-sympathectomy patients. Use cautiously in surgical patients. The following may occur: transient elevated BUN or creatinine or both, hyperglycemia and glycosuria (diabetic insulin requirements may be altered), hyperuricemia and gout, digitalis intoxication (in hypokalemia), decreasing alkali reserve with possible metabolic acidosis. 'Dyazide' interferes with fluorescent measurement of quinidine.

Adverse Reactions: Muscle cramps, weakness, dizziness, headache, dry mouth; anaphylaxis, rash, urticaria, photosensitivity, purpura, other dermatological conditions; nausea and vomiting, diarrhea, constipation, other gastrointestinal disturbances. Necrotizing vasculitis, paresthesias, icterus, pancreatitis, xanthopsia and, rarely, allergic pneumonitis have occurred with thiazides alone.

Supplied: Bottles of 100 and 1000 capsules; Single Unit Packages of 100 (intended for institutional use only).

FOR LONG-TERM CONTROL OF HYPERTENSION.* SERUM K^+ AND BUN SHOULD BE CHECKED PERIODICALLY. (SEE WARNINGS SECTION.)

John V. Blady, M.D., to take oath as Society president

John V. Blady, M.D., Philadelphia surgeon, becomes the 128th president of the Pennsylvania Medical Society at ceremonies on Wednesday, October 26, at the Host Farm Resort Motel.

Dr. Blady brings to the office experience at all levels of organized medicine and a career of achievement as a teacher of physicians and a leader in efforts to combat cancer. He was elected vice president of the State Society in 1975 and proceeded to the presidency elect in 1976. He has been a member of the Society's House of Delegates since 1944 and served on various councils and commissions prior to being elected to move into the Society's highest office.

Dr. Blady was president of the Philadelphia County Medical Society in 1967, after having served the organization in a number of capacities, including membership on the Board of Directors. Among the many duties he fulfilled at the county level were as chairman of the Cancer Control Committee (1947-1958), the New Building Committee (1963-66), and the Investment Advisory Committee (1969-present).

The incoming Society president is a member of a number of medical specialty organizations, including the American College of Surgeons, Society of Head and Neck Surgeons, the College of Physicians of Philadelphia, and the Society of Surgical Oncology. He served as president of the Society of Surgical Oncology in 1947-48 and of the American Radium Society in 1971-72.

Born in Milwaukee, Wisconsin, John Blady completed his undergraduate studies at the University of Wisconsin and received his medical degree from Duke University in 1932. After a year's surgical internship at Duke University Hospital, he first came to Temple University Hospital to take a residency in radiology in July 1933. In January 1936 he was named a Rockefeller fellow at Memorial Hospital, New York. The fellowship provided for three and a half years of intensive study at the institution specializing in the treatment of cancer.

DR. BLADY confers with John B. Lovette, M.D., of Johnstown, who becomes president elect at the time of Dr. Blady's installation.

Thus began Dr. Blady's lifelong commitment to the battle to control cancer. After completing his fellowship, which included rotation through all departments of the famed cancer hospital, he returned to Temple University Hospital in July 1939 as director of the Tumor Clinic and associate professor of surgery. His first assignment in addition to those indicated by his title was to organize a radiation therapy department as a separate entity within the department of radiology. His efforts in developing the new department, as director of the Tumor Clinic, and in surgery led to the emergence of Temple as one of the first comprehensive cancer treatment centers in the nation.

In the ensuing years Dr. Blady became a leader in educating the public about cancer and helped to establish the Philadelphia and Pennsylvania Divisions of the American Cancer Society. He is the author of more than 40 publications, most of which concern cancer. He was active in the work of the Wainwright Tumor Clinic, of which he was president in 1958, and was directly involved in establishing Pennsylvania's Cancer Coordinating Committee. In 1950 Dr. Blady was named clinical professor of surgery, specializing in the diagnosis and treatment of tumors of the head and neck.

In 1950 also Dr. Blady was awarded the Gold Medal Division Award of the American Cancer Society in recognition of his contributions to the control of cancer.

He is emeritus clinical professor of surgery and emeritus director of the Tumor Clinic at Temple. Since his retirement from the staff there he has engaged in the private practice of surgery and is attending surgeon, specializing in the head and neck, at Paoli Memorial Hospital.

Dr. Blady approaches the Society presidency with deep concerns about the Society's finances, the malpractice insurance crisis, and government encroachment into the practice of medicine. His intention is to rely on his years of experience in various problem solving roles in providing the leadership the State Society currently needs.

Dr. and Mrs. Blady have a son, two daughters, and eight grandchildren. They reside in Wynnewood where, when he has time, Dr. Blady enjoys three of his hobbies—gardening, golf, and coin collecting.

Society's dues on House of Delegates agenda

Thirty-six months ago in Pittsburgh the House of Delegates called for more vigorous, aggressive Society action in legislation, legal matters, and communications. At the same time, the House increased dues from $100 to $150 to finance these initiatives.

This fall, the effects of these legal and governmental battles are reflected in Society finances as expenses are exceeding income. Preliminary figures indicate that the Society's 1977 total expenses will reach $2,023,000. With maximum income at $1,767,000, the deficit comes to approximately $256,000. Major factors in the 1977 deficit have been legal and actuarial costs. Legal costs alone shot up more than 500 percent in the last two years. Total legal costs in 1976 came to more than $240,000. That compares with legal expense of $44,186 in the pre-malpractice crisis year of 1974. So far in 1977 the Society has spent more than $182,000 in legal costs and another $84,000 in actuarial fees. Before the year is out, total legal and actuarial fees may reach $312,000.

Although the Society filed its first lawsuit as recently as 1975, others followed rapidly. By 1977 the Society was underwriting more than a dozen suits, part of the stepped up program to protect members' interests.

Although the 1978 budget will not be set until the Board meets October 24, preliminary figures reviewed by the Finance Committee continue the trend of increased costs. Total expenses for 1978 are projected at $2,103,000. The anticipated deficit for 1978 is $295,000, but that figure does not include any extraordinary legal or actuarial fees.

Legal counsel anticipates an additional $157,000 in costs to support litigation already in progress. If a settlement agreement with Argonaut fails, and the Society's captive insurance company is not launched, attorneys estimate an additional $231,000 in legal fees in 1978. If the Society is forced to confront Argonaut for another year of rate increase hearings, actuarial fees could reach $100,000. The least favorable conditions in 1978 could produce a $700,000 deficit.

Current Society dues were set three years ago. At that time, the Finance Committee recommended a $25 increase. Delegates, anxious to step up Society activity, took the dues from $100 up to $150. Virtually all of the Society's income (93 percent) comes from members' dues.

Faced with a 1978 deficit as high as $700,000, a dues increase seems inevitable. The question before the House of Delegates on October 27 will be, "How much?" The Finance Committee and the Board of Trustees will review the budget again before the Annual Session to decide what recommendation for 1978 dues will be placed before the House of Delegates.

The 1977-78 Membership Roster Edition of PENNSYLVANIA MEDICINE is now available. The roster contains component county medical society officers, component county society members with addresses and specialty codes, and an alphabetical listing of all members of the State Society and their county affiliations. Members may receive a complimentary copy by contacting the Membership Department, Pennsylvania Medical Society, 20 Erford Rd., Lemoyne, PA 17043. Additional copies are available for $30 each.

1977 Summary of Major Legal Activities

Argonaut v. PMS $90,000
($25 million suit against PMS by Argonaut)

Argonaut Rate Increase $62,500
(PMS intervened in Insurance Department hearing on Argonaut proposed 70 percent rate increase)

JUA Rate Increase $ 4,000
(PMS intervened in Insurance Department hearing on 75.2 percent rate increase request of Joint Underwriting Association)

ISO Rate Increase $ 500
(PMS intervened in Insurance Department hearing on 20.1 percent rate increase request of Insurance Services Office)

State Board Decision Appeal $ 8,000
(Constitutional test of Act 111 mandatory insurance requirement)

Act 111 Arbitration $10,000
(PMS amicus curiae in test of constitutionality of mandatory arbitration)

Countersuits $25,000
(PMS support to physicians who are countersuing attorneys for abuse of legal system)

Chiropractor Antitrust Suit $50,000
(Pennsylvania Chiropractic Society has sued PMS for violation of antitrust laws)

Clinical Lab Suit $ 1,800
(Constitutional test of Health Department rules for physicians' office labs)

HSA Suit $10,000
PMS support of Philadelphia, Bucks, Montgomery, Delaware, and Chester County Medical Societies over HSA boundaries)

Academy of O & O $ 2,000
(PMS support to Academy of Ophthalmology and Otolaryngology on prepaid eye care)

Quackery Committee Suits $10,000
(Suits on fluoridation and chiropractic advertising supported by Quackery Defense Fund)

Professional Corporation Tax $ 500
(Suit against Department of Revenue over unfair taxation of physician professional corporations)

Society president elect selects committee

The State Society Board of Trustees on August 24 approved members and alternate members of the Interspecialty Committee, as selected by John V. Blady, M.D., president elect of the Society. The following committee members will serve during Dr. Blady's term as president.

Allergy—Martin A. Murcek, M.D., member (Westmoreland); Gilbert A. Friday, M.D., alternate (Allegheny).

Anesthesiology—David J. Torpey, Jr., M.D., member (Allegheny); Anthony Barone, M.D., alternate (Lehigh).

Clinical Pathology—Rosario Maniglia, M.D., member (Dauphin); James M. Smith, M.D., alternate (Cumberland).

Colon and Rectal Surgery—Howard D. Trimpi, M.D., member (Lehigh); Indru T. Khubchandani, M.D., alternate (Lehigh).

Dermatology—Joseph H. Gerdes, Jr., M.D., member (Dauphin); Monte H. Courter, M.D., alternate (Lancaster).

Family Physicians—John J. Hanlon, M.D., member (Cumberland); Leroy A. Rodgers, M.D., alternate (Cambria).

Internal Medicine—Robert S. Pressman, M.D., member (Philadelphia); Alexander M. Minno, M.D., alternate (Allegheny).

Neurosurgery—Henry L. Hood, M.D., member (Montour); James P. Argires, M.D., alternate (Lancaster).

Nuclear Medicine—Gilbert H. Isaacs, M.D., member (Allegheny); David R. Brill, M.D., alternate (Montour).

Obstetrics/Gynecology—Leopold O. Loewenberg, M.D., member (Philadelphia); James S. Bates, M.D., alternate (Montour).

Ophthalmology and Otolaryngology—Paul A. Cox, M.D., member (Cumberland); Turgut N. Hamdi, M.D., alternate (Philadelphia).

Orthopedics—Willard H. Love, M.D., member (Dauphin); Thomas K. Howard, M.D., alternate (York).

Pediatrics—James E. Jones, M.D., member (Dauphin); Ray G. Sarver, M.D., alternate (Westmoreland).

Physical Medicine and Rehabilitation—John S. Tennant, M.D., member (Dauphin); Robert Steinman, M.D., alternate (Lancaster).

Plastic Surgery—Thomas J. Nauss, M.D., member (Luzerne); Herbert A. Ecker, M.D., alternate (Lycoming).

Psychiatry—Rex A. Pittenger, M.D., member (Allegheny); Edward C. Leonard, M.D., alternate (Philadelphia).

Radiology—Howard E. Fink, Jr., M.D., member (Dauphin); Richard J. Pawelski, M.D., alternate (Dauphin).

Thoracic Surgery—Joseph C. Donnelly, Jr., M.D., member (Philadelphia).

Urology—Richard J. Currie, M.D., member (Philadelphia); Robert H. Clymer, M.D., alternate (Berks).

The Board has also confirmed the appointment of David S. Cristol, M.D. (Philadelphia) as a member of the Council on Professional Relations and Services.

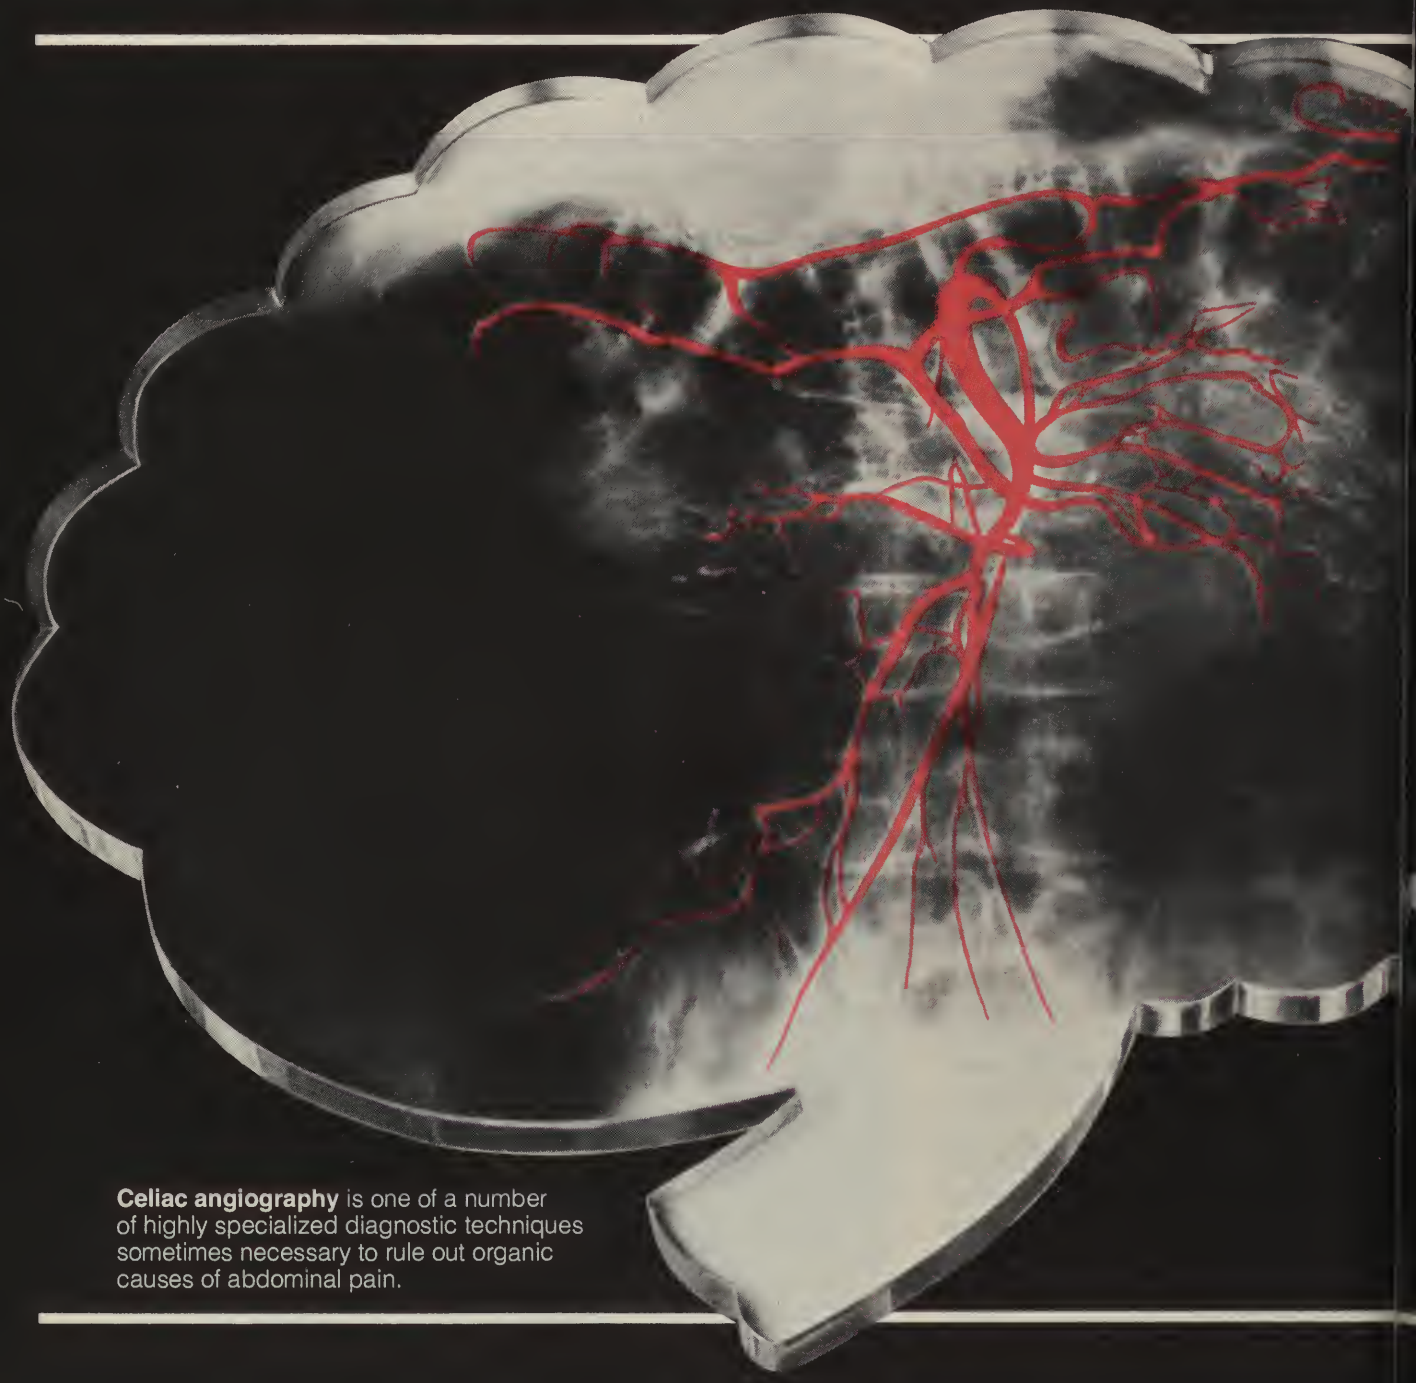
Radiologists choose officers

New officers of the Pennsylvania Radiological Society were recently installed for the 1977-78 term. John H. Harris, Jr., M.D., of Carlisle, is the organization's new president, succeeding Ross H. Smith, Jr., M.D., Pittsburgh.

Other officers are: Bernard J. Ostrum, M.D., Philadelphia, president elect; Donald G. Ferguson, M.D., Pittsburgh, first vice president; Robert W. Allen, M.D., Sharon, second vice president; Joseph A. Marasco, Jr., M.D., Pittsburgh, secretary; and Gene J. Triano, M.D., Harrisburg, treasurer.

ARRIVING for the August 24 meeting of the Society's Board of Trustees are President Elect John V. Blady, M.D., and President William J. Kelly, M.D. Dr. Blady will be installed as the Society's 128th president on October 26. Names of his appointees, who received Board approval August 24, to the Interspecialty Committee appear above.

THE LOWER G.I. TRACT: ORGANICALLY SOUND



Celiac angiography is one of a number of highly specialized diagnostic techniques sometimes necessary to rule out organic causes of abdominal pain.

...BUT OVERSENSITIVE TO EMOTIONAL STRESS

IN IRRITABLE BOWEL SYNDROME* LIBRAX PROVIDES DISTINCTIVE ADVANTAGES

- the specific antianxiety action of Librium® (chlordiazepoxide HCl)
- the potent antispasmodic action of Quarzan® (clidinium Br)

Adjunctive/Dual-Action

LIBRAX®

Each capsule contains 5 mg chlordiazepoxide HCl and 2.5 mg clidinium Br.

A clear treatment advantage for patients with irritable bowel syndrome

ROCHE

*This drug has been evaluated as possibly effective for this indication.
Please see following page for brief summary of prescribing information.

A CLEAR TREATMENT ADVANTAGE FOR PATIENTS WITH IRRITABLE BOWEL SYNDROME*

Adjunctive/Dual-Action LIBRAX®

Each capsule contains 5 mg chlordiazepoxide HCl and 2.5 mg clidinium Br.

ONLY LIBRAX PROVIDES THE SPECIFIC ANTIANXIETY ACTION OF LIBRIUM® (chlordiazepoxide HCl) PLUS THE POTENT ANTISPASMODIC ACTION OF QUARZAN® (clidinium Br)

Please consult complete prescribing information, a summary of which follows:

* **Indications:** Based on a review of this drug by the National Academy of Sciences—National Research Council and/or other information, FDA has classified the indications as follows:
"Possibly" effective: as adjunctive therapy in the treatment of peptic ulcer and in the treatment of the irritable bowel syndrome (irritable colon, spastic colon, mucous colitis) and acute enterocolitis.
Final classification of the less-than-effective indications requires further investigation.

Contraindications: Patients with glaucoma; prostatic hypertrophy and benign bladder neck obstruction; known hypersensitivity to chlordiazepoxide hydrochloride and/or clidinium bromide.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering Librium® (chlordiazepoxide hydrochloride) to known addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

As with all anticholinergic drugs, an inhibiting effect on lactation may occur.

Precautions: In elderly and debilitated, limit dosage to smallest effective amount to preclude development of ataxia, oversedation or confusion (not more than two capsules per day initially; increase gradually as needed and tolerated). Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider pharmacologic effects of agents, particularly potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: No side effects or manifestations not seen with either compound alone have been reported with Librax. When chlordiazepoxide hydrochloride is used alone, drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are avoidable in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally with chlordiazepoxide hydrochloride, making periodic blood counts and liver function tests advisable during protracted therapy. Adverse effects reported with Librax are typical of anticholinergic agents, *i.e.*, dryness of the mouth, blurring of vision, urinary hesitancy and constipation. Constipation has occurred most often when Librax therapy is combined with other spasmolytics and/or low residue diets.

Dosage: Individualize for maximum beneficial effects. Usual maintenance dose is 1 or 2 capsules, 3 or 4 times a day, before meals and at bedtime. Geriatric patients—see Precautions.

How Supplied: Librax is available in green capsules, each containing 5 mg chlordiazepoxide hydrochloride (Librium®) and 2.5 mg clidinium bromide (Quarzan®)—bottles of 100 and 500; Tel-E-Dose® packages of 100; Prescription Paks of 50, available singly and in trays of 10.

Statewide hypertension effort has PMS endorsement

A massive hunt is on to find Pennsylvanians who have hypertension but are unaware of it. The State Society's Board of Trustees endorsed the effort at its August 24 meeting.

Secretary of Health Leonard Bachman and Lawrence N. Adler, M.D., president of the American Heart Association, Pennsylvania Affiliate, announced in September that their agencies had received a federal grant to launch a cooperative program aimed at screening 200,000 Pennsylvanians for hypertension between October 1 of 1977 and 1978.

Blood pressure screenings have been conducted separately by the state health department and the heart association. By pooling resources and dividing tasks, the agencies expect to make possible even more screenings at less cost.

The project, "The Pennsylvania High Blood Pressure Control Program," has been endorsed by the Pennsylvania Medical Society, Pennsylvania Academy of Family Physicians, Pennsylvania Osteopathic Medical Association, and the Pennsylvania Pharmaceutical Association. Representatives of these agencies and others have been included in an inter-agency council, formed to develop total community involvement for this statewide program.

The project has five major objectives: detection, followup, treatment, training, and education.

The number of available screening sites and the frequency of screenings will be increased in order that 200,000 Pennsylvanians can be evaluated within one year. If usual indicators hold, it is expected as many as one fourth of those screened will be found to have elevated blood pressure.

Persons with elevated blood pressure will be notified and referred to their family physicians or community health centers for diagnosis and treatment. There also will be followup of patients within six months.

Through the project, screening technicians will be instructed in the latest procedures for measuring blood pressure. A non-profit agency, Vital Signs Institute of Philadelphia, will conduct this training phase.

Professional education and activities aimed at public awareness also will be part of the project. The first educational programs, a series of five nurses' seminars on hypertension, are being held throughout Pennsylvania during October.

Emergency physicians seek Society support

Representatives of the Pennsylvania Chapter of the American College of Emergency Physicians, an organization representing over 600 physicians, appeared before the Pennsylvania Medical Society's Council on Medical Service September 7. They requested Society support in their attempt to remain private independent physicians.

Recent tightening in DPW medicaid policy denies payment to the emergency physician for professional services when a physician enters into an agreement with a hospital to provide coverage of the emergency room. The welfare department contends that these physicians are hospital based and employees and, therefore, are not entitled to bill on a fee for service basis, even though in many cases there is no other means of remuneration under such agreements. As a result of the meeting, further negotiations with the deputy secretary for family assistance are scheduled.

EMERGENCY room physicians were represented at the September 7 meeting of the Council on Medical Service. Left to right above are: William W. Resinger, M.D., president of the Pennsylvania Chapter, American College of Emergency Physicians; David K. Wagner, M.D., director of the Section of Emergency Medical Service, Medical College of Pennsylvania; and Roland T. Keddie, M.D., J.D., chairman of the chapter's ad hoc committee on problems related to the Department of Public Welfare Medical Assistance Program.

Saint Joseph Hospital to train residents

The Liaison Committee on Graduate Medical Education of the American Medical Association has approved Saint Joseph Hospital, Reading, for conducting a residency training program in family practice.

Scheduled to begin training the first group of residents in January 1978, the three year program will be under the direction of Patrick A. Mazza, M.D., director of the hospital's department of family practice. Robert L. O'Connell, M.D., will serve as associate director of the program which will eventually have a faculty of 12 physicians.

AAFP program confronts professional liability crisis

An informational program designed to help family doctors acquaint their patients and themselves with the dangers of escalating professional liability insurance rates is being undertaken by the American Academy of Family Physicians.

The program, called the Professional Liability Information Program (PLIP), is aimed at informing physician-members about what can be done to help alleviate the malpractice problem by enhancing the physician-patient relationship; informing patients, through their family physicians, about the effect of the malpractice situation on medical costs and services; and creating a climate among practicing members and family practice residents that will encourage participation in the gathering of performance data essential to the attainment of better insurance premium rates and other elements of an acceptable solution to the professional liability problem.

The key to the PLIP is a publication entitled *Eleven Ways to Minimize the Risk of Professional Liability Suits,* written by Holger Rasmussen, M.D., head of the AAFP Task Force on Professional Liability. Because many malpractice suits are initiated by patients who are improperly informed about procedures and risks involved, *Eleven Ways* focuses on the ways in which family physicians may confront this and other malpractice situations while emphasizing a strong doctor-patient relationship.

Other elements of the PLIP program include brochures to members informing them of the program and its objectives, leaflets explaining the liability crisis to patients for distribution by their family physician, a speech with visual materials for state chapter meetings, and a packet of materials to family practice residencies to acquaint residents with the program.

While PLIP is not intended to be the answer to all malpractice problems, it is expected to be an important first step in confronting risk factors in practice situations.

Practical review for psychiatrists offered

A unique course in practical medicine designed for the practicing clinical psychiatrist will be offered by the Western Psychiatric Institute and Clinic of the University of Pittsburgh School of Medicine on November 6 and 7.

The course will focus on several internal medicine subspecialties—neurology, cardiology, gastroenterology, and endocrinology—which practicing psychiatrists have indicated to be of special use in confronting their patients' complaints and/or ongoing treatment.

The University of Pittsburgh certifies that the program is approved for 12 credit hours in Category 1 toward the Physician's Recognition Award of the AMA.

For further information and registration contact Marie Killilea, Coordinator of Continuing Education, Western Psychiatric Institute and Clinic, 3811 O'Hara St., Room 980, Pittsburgh, PA 15261; (412) 624-3354.

THE SOCIETY'S position on S.B. 679 was presented to the Senate Insurance Committee August 25, by J. Joseph Danyo, M.D., of York. The Society supports the concept of including professional corporations under Act 111, the state's medical malpractice insurance law. Dr. Danyo, a member of the Society's ad hoc committee on medical malpractice insurance, is shown on the left discussing the bill with Senator Ralph W. Hess, also of York, a member of the Insurance Committee.

in my opinion

Copayment—a way to halt runaway health care costs

Many of us in studying the escalating cost of medical care have turned from one direction to another to find the cause. Certainly recent technological advances weigh heavily in this regard. Spiraling general inflation affects all areas of society. The ever increasing minimum wage has had a special impact on hospitals. The malpractice problem, with skyrocketing premiums and the immeasurable cost of practicing defensive medicine, must be included in the list of culprits, along with many other factors.

A factor which has seldom been addressed, however, is the present voluntary health insurance structure. The Blue plans themselves, the major method by which individuals finance their medical care, may well be one of the primary factors in runaway costs. Blue Cross plans, with their full pay coverage, give the illusion of no apparent cost to the patient, place tremendous patient and family pressures on the doctor, and encourage questionable admissions and prolonged stays despite anything the physician may do. Total payment of the hospital bill by Blue Cross provides an incentive for the patient to spend that extra day over the weekend because it's not convenient for son or daughter "to come and get me today."

In the case of physicians' fees, I believe the present first dollar coverage of the Blue Shield service contract discourages any incentive to economize. I realize that I am speaking against "sacred cows," but I believe that the Blue Shield service benefit, with its participating physician, along with the total pay of Blue Cross are two major factors in driving up the cost of care. The patient has an almost pathological desire to use the insurance for which he has paid so dearly.

We in the medical profession must share the blame with the Blue plans. Many of us remember that when Medicare came along, we *insisted* that the government put in deductibles for the hospital stay and for the physician's fee. We argued that if these deductibles were not available, there would be overutilization on the part of patients. We then immediately turned around and encouraged Blue Cross and

Dr. Masland is immediate past president of the Pennsylvania Medical Society and chairman of the ad hoc committee on medical malpractice insurance. His medical specialty is internal medicine.

Please see other side for a summary of product information.

These are some of the patients who may need BEROCCA® TABLETS therapy Rx only

Balanced high potency B-complex and 500 mg vitamin C

For nutritional support in:

- The patient with chronic disease
- The patient with wasting disease
- The patient with febrile illness
- The patient with GI disorder
- The patient with severe burns
- The patient with hyperthyroidism
- The patient with diabetes
- The problem drinker
- The surgical patient

Virtually no odor or aftertaste
Economically priced

Please see complete product information, a summary of which follows:

Each Berocca Tablet contains:

Thiamine mononitrate (Vitamin B_1)	15 mg
Riboflavin (Vitamin B_2)	15 mg
Pyridoxine HCl (Vitamin B_6)	5 mg
Niacinamide	100 mg
Calcium pantothenate	20 mg
Cyanocobalamin (Vitamin B_{12})	5 mcg
Folic acid	0.5 mg
Ascorbic acid (Vitamin C)	500 mg

Indications: Nutritional supplementation in conditions in which water-soluble vitamins are required prophylactically or therapeutically.

Warning: Not intended for treatment of pernicious anemia or other primary or secondary anemias. Neurologic involvement may develop or progress, despite temporary remission of anemia, in patients with pernicious anemia who receive more than 0.1 mg of folic acid per day and who are inadequately treated with vitamin B_{12}.

Dosage: 1 or 2 tablets daily, as indicated by clinical need.

Available: In bottles of 100 and 500.

Nutley, New Jersey 07110

Blue Shield to sell the 65-Special which covers these deductibles.

I realize that labor unions have fought hard for first dollar coverage because they do not want their union members to pay one cent out of pocket for their medical care. We in the medical profession have also fostered this by participation in the Blue Shield service contract.

In England, the government has answered in part the problem of cost by limiting supply. Our government, with its proposed cap on hospital revenue, is also beginning to move in this direction. I believe this is the road we will surely walk if we continue to allow demand to go unfettered.

Is there an answer? Yes. Let some of the economic deterrents common to most other economic dealings return to the medical marketplace. Let us support a reasonable combination of deductibles and copayments and oppose programs which provide first dollar coverage. As physicians, this means withdrawal from Blue Shield. We should not support Blue Cross programs that provide full pay benefits. In my view, sanity will return to health care financing only when each of the participants to the transaction—patient, doctor, and hospital—is forced to cope with some of the cost of utilizing the system. This may sound revolutionary, but the times call for drastic and preferably voluntary solutions.

David S. Masland, M.D.
Carlisle

It's an award I got for coming in first among physicians who didn't get any awards.

Legal counsel reports

Supreme Court to rule in psychiatric records case

FRED SPEAKER
Harrisburg

The Pennsylvania Supreme Court will be the next scene in a continuing struggle concerning a psychiatrist-witness held in contempt for refusing to turn over records of a patient.

The saga started at a hearing involving a 15-year-old boy facing deprived and delinquent charges. A court psychiatrist determined that the boy's problems were related partially to an alcoholic mother. The mother had received psychiatric treatment and the court psychiatrist recommended obtaining her hospital records. She refused to consent, and the Western Psychiatric Institute and Clinic refused to release the records.

The lower court issued a subpoena directing that the records be produced. Dr. Loren Roth appealed and claimed that the psychiatric records were privileged under Pennsylvania statutory provisions[1] and the Principles of Medical Ethics. The lower court held that there was no privilege and ordered the records to be turned over. Dr. Roth refused, and he was held in contempt and fined $100.

The issue before the Superior Court[2] dealt with whether the contempt was civil or criminal. The Superior Court held that it was criminal and therefore should be considered by the Pennsylvania Supreme Court. The basic issue thus is continued—is a psychiatrist's refusal under these circumstances to surrender psychiatric records punishable by contempt? We will have to wait until the Supreme Court decides before that question may be answered.

1. *28 P.S. § 328.*
2. **In re B. Appeal of Roth,** *372 A. 2d 884 (Pa. Super. 1977).*

Mr. Speaker is an attorney with Pepper, Hamilton & Scheetz, legal counsel for the State Society.

How important are medical records?

The Commonwealth Court has recently[1] decided that adequate records are important to physicians who want to get paid for the work they have done.

The Department of Public Welfare barred a physician from further participation in the medical assistance program and denied payment of his claims for services already rendered for failure to maintain supporting medical records. The physician admitted that the only medical record he kept was the invoices which were submitted to the Commonwealth and which contained a one or two word technical diagnosis. The Commonwealth Court sustained the decision of the Department of Public Welfare, stating that the physician:

> . . . *contends that the notation on the invoice, together with his recall, are a sufficient and adequate record. . . . Aside from the obvious need for a record so that another physician would be able to determine the proper course of treatment in emergencies, DPW requires supporting records to determine whether the physician is genuinely entitled to reimbursement and to guard the Program against fraudulent claims. In that regard, we hold that [the physician's] records are patently inadequate.*

1. **Stoffan v. Commonwealth of Pennsylvania,** *Department of Public Welfare, No. 1288 C.D. 1976 (July 21, 1977).*

Psychiatric symposium scheduled

The Medical College of Pennsylvania's department of psychiatry will sponsor the eleventh annual symposium beginning at 9:00 a.m., Sunday, November 13, in the Kaiser Auditorium at the college.

Entitled "Psychodynamic Implications of the Studies on the Split Brain," the program will feature experts in medical, psychological, and social sciences, including: David Galin, M.D., assistant professor of psychiatry at the Langley Porter Institute, University of California-San Francisco; Mitchell Glickstein, Ph.D., professor of psychology at Brown University; M. S. Gazzaniga, Ph.D., professor of psychology and social sciences at the State University of New York-Stony Brook; Jerre Levy, Ph.D., associate professor of psychology at the University of Pennsylvania; and Ronald E. Myers, M.D., Ph.D., chief of the section of developmental brain pathology, National Institute of Neurological and Communicative Disorders and Stroke.

The Medical College of Pennsylvania certifies that the program is acceptable on an hour for hour basis in Category 1 for the Physician's Recognition Award of the American Medical Association.

For details write to the Department of Psychiatry, Medical College of Pennsylvania, 3300 Henry Ave., Philadelphia, PA 19129; or call (215) 842-6923.

B.W.CO.® HAS PUT MORE POTENCY IN THE LINE

EMPRACET® with Codeine Phosphate, 60 mg, No. 4 Ⓒ

EMPRACET® with Codeine Phosphate, 30 mg, No. 3 Ⓒ

CONTRAINDICATIONS: Hypersensitivity to acetaminophen or codeine.

WARNINGS: Drug dependence. Codeine can produce drug dependence of the morphine type and may be abused. Dependence and tolerance may develop upon repeated administration; prescribe and administer with same caution appropriate to oral narcotics. Subject to the Federal Controlled Substances Act.

Usage in ambulatory patients. Caution patients that these products may impair mental and/or physical abilities required for performance of potentially hazardous tasks such as driving a car or operating machinery.

Interaction with other CNS depressants. Patients receiving other narcotic analgesics, general anesthetics, phenothiazines, tranquilizers, sedative-hypnotics, or other CNS depressants (including alcohol) may exhibit additive CNS depression; when used together reduce dose of one or both.

Usage in Pregnancy. Safe use is not established. Should not be used in pregnant patients unless potential benefits outweigh possible hazards.

PRECAUTIONS: Head injury and Increased intracranial pressure. Respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a pre-existing increase in intracranial pressure. Narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.

Acute abdominal condition. These products or other narcotics may obscure the diagnosis or clinical course of acute abdominal conditions.

Special risk patients. Administer with caution to certain patients such as elderly or debilitated patients and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, or prostatic hypertrophy or urethral stricture.

ADVERSE REACTIONS: Most frequently include lightheadedness, dizziness, sedation, nausea, and vomiting; more prominent in ambulatory than in nonambulatory patients; some may be alleviated if patient lies down; others include: euphoria, dysphoria, constipation and pruritus.

DRUG INTERACTIONS: CNS depressant effect may be additive with that of other CNS depressants. See Warnings.

For symptoms and treatment of overdosage and full prescribing information, see package insert.

Introducing EMPRACET® c̄ CODEINE #4

Each tablet contains: codeine phosphate, 60 mg (1 gr) (Warning—may be habit-forming); and acetaminophen, 300 mg.

Ⓒ III

Our new non-aspirin/ codeine analgesic for moderate to severe pain.

New peach-colored Empracet c̄ Codeine #4 offers a potent alternative for patients in whom aspirin is not indicated.

Unlike compounds containing oxycodone which afford comparable analgesia, new Empracet c̄ Codeine #4 gives you CIII prescribing convenience—up to 5 refills in 6 months at your discretion (where state law permits). And, prescribing by telephone is permissible in most states. Moreover, new Empracet c̄ Codeine #4 has less addiction potential than does oxycodone.

For those of your patients requiring a less potent analgesic, non-aspirin Empracet® c̄ Codeine #3 provides effective relief of moderate pain.

Burroughs Wellcome Co. makes codeine combination products. You make the choice.

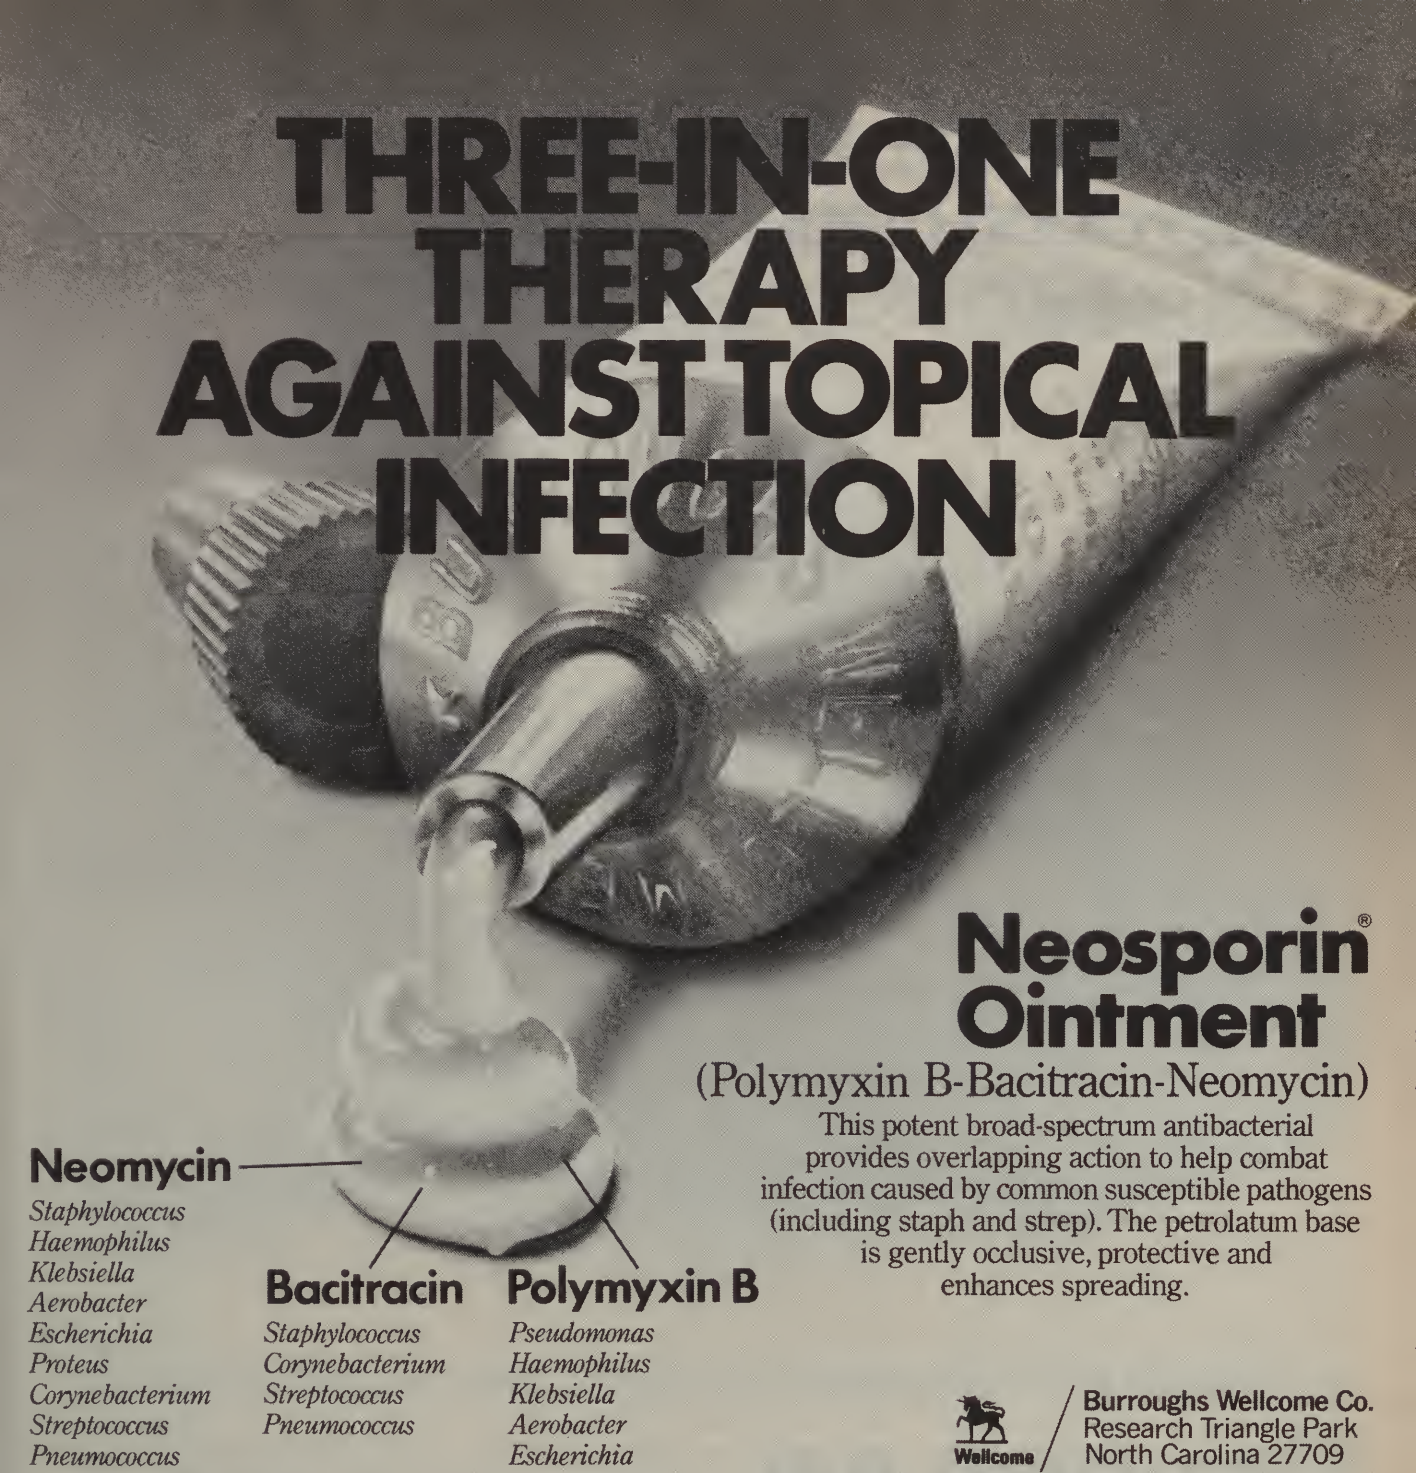
THREE-IN-ONE THERAPY AGAINST TOPICAL INFECTION



Neosporin® Ointment

(Polymyxin B-Bacitracin-Neomycin)

This potent broad-spectrum antibacterial provides overlapping action to help combat infection caused by common susceptible pathogens (including staph and strep). The petrolatum base is gently occlusive, protective and enhances spreading.

Neomycin

Staphylococcus
Haemophilus
Klebsiella
Aerobacter
Escherichia
Proteus
Corynebacterium
Streptococcus
Pneumococcus

Bacitracin

Staphylococcus
Corynebacterium
Streptococcus
Pneumococcus

Polymyxin B

Pseudomonas
Haemophilus
Klebsiella
Aerobacter
Escherichia

In vitro overlapping antibacterial action of Neosporin® Ointment (polymyxin B-bacitracin-neomycin).

Wellcome

Burroughs Wellcome Co.
Research Triangle Park
North Carolina 27709

Neosporin® Ointment

(Polymyxin B-Bacitracin-Neomycin)

Each gram contains: Aerosporin® brand Polymyxin B Sulfate 5,000 units; zinc bacitracin 400 units; neomycin sulfate 5 mg (equivalent to 3.5 mg neomycin base); special white petrolatum qs; in tubes of 1 oz and 1/2 oz and 1/32 oz (approx.) foil packets.

WARNING: Because of the potential hazard of nephrotoxicity and ototoxicity due to neomycin, care should be exercised when using this product in treating extensive burns, trophic ulceration and other extensive conditions where absorption of neomycin is possible. In burns where more than 20 percent of the body surface is affected, especially if the patient has impaired renal function or is receiving other aminoglycoside antibiotics concurrently, not more than one application a day is recommended.

When using neomycin-containing products to control secondary infection in the chronic dermatoses, it should be borne in mind that the skin is more liable to become sensitized to many substances, including neomycin. The manifestation of sensitization to neomycin is usually a low grade reddening with swelling, dry scaling and itching; it may be manifest simply as failure to heal. During long-term use of neomycin-containing products, periodic examination for such signs is advisable and the patient should be told to discontinue the product if they are observed. These symptoms regress quickly on withdrawing the medication. Neomycin-containing applications should be avoided for that patient thereafter.

PRECAUTIONS: As with other antibacterial preparations, prolonged use may result in overgrowth of nonsusceptible organisms, including fungi. Appropriate measures should be taken if this occurs.

ADVERSE REACTIONS: Neomycin is a not uncommon cutaneous sensitizer. Articles in the current literature indicate an increase in the prevalence of persons allergic to neomycin. Ototoxicity and nephrotoxicity have been reported (see Warning section).

Complete literature available on request from Professional Services Dept. PML.

consider the effect on coexisting diabetes when you prescribe a vasodilator*

(POSTERIOR VIEW OF PANCREAS)

no interference in the management of the diabetic patient has been reported with

VASODILAN®
(ISOXSUPRINE HCl)

the compatible vasodilator TABLETS, 20 mg.

***Indications:** Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.
Vasodilan injection, isoxsuprine HCl, 5 mg., per ml.

Dosage and Administration: Oral: 10 to 20 mg., three or four times daily. Intramuscular: 5 to 10 mg.(1 or 2 ml.) two or three times daily. Intramuscular administration may be used initially in severe or acute conditions.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Parenteral administration is not recommended in the presence of hypotension or tachycardia.

Intravenous administration should not be given because of increased likelihood of side effects.

Adverse Reactions: On rare occasions oral administration of the drug has been associated in time with the occurrence of hypotension, tachycardia, nausea, vomiting, dizziness, abdominal distress, and severe rash. If rash appears the drug should be discontinued.

Although available evidence suggests a temporal association of these reactions with isoxsuprine, a causal relationship can be neither confirmed nor refuted.

Administration of single dose of 10 mg. intramuscularly may result in hypotension and tachycardia. These symptoms are more pronounced in higher doses. For these reasons single intramuscular doses exceeding 10 mg. are not recommended. Repeated administration of 5 to 10 mg. intramuscularly at suitable intervals may be employed.

Supplied: Tablets, 10 mg., bottles of 100, 1000, 5000 and Unit Dose; Tablets, 20 mg., bottles of 100, 500, 1000, 5000 and Unit Dose; Injection, 10 mg. per 2 ml. ampul, box of six 2 ml. ampuls.

MDs in the news

Webb S. Hersperger, M.D., of Carlisle, was recently elected first vice president of the Pennsylvania Academy of Ophthalmology and Otolaryngology. Dr. Hersperger is a past president of the Cumberland County Medical Society and a member of the State Society's Council on Medical Service.

The following new officers were recently elected by the Alumni Association of Hahnemann Medical College and Hospital: **Mary P. Sterling, M.D.,** Philadelphia, president; **Phillip Davis, M.D.,** Beverly Hills, California, first vice president; **Warren E. Smith, M.D.,** Philadelphia, second vice president; **James C. Gehris, M.D.,** Shamokin, president elect; **Horst A. Agerty, M.D.,** Wynnewood, secretary; and **Arnold T. Berman, M.D.,** Philadelphia, treasurer.

Gary L. Lattimer, M.D., was the recipient recently of the state American Legion's Distinguished Service Award. Dr. Lattimer, of Allentown, was honored for outstanding service in his research of the disease that killed 29 Pennsylvania legionnaires in August, 1976.

Sol Sherry, M.D., recently received the Robert P. Grant Medal of the International Society on Thrombosis and Haemostasis during the group's annual congress held recently in Philadelphia. Dr. Sherry, who is the society's current president, is chairman of medicine at Temple University Medical Center and director of Temple's Specialized Center for Research on Thrombosis.

Herschel E. Griffin, M.D., was appointed recently to the National Commission on Digestive Diseases. Dr. Griffin is professor of epidemiology and dean of the University of Pittsburgh Graduate School of Public Health. He is president of the Armed Forces Epidemiological Board and an alternate delegate in preventive medicine to the AMA House of Delegates. The national commission plans to deal with problems such as incidence and duration of digestive diseases, mortality rates resulting from such illnesses, and social and economic impact of the disorders.

Ronald Ambler, M.D., was recently honored by Suburban General Hospital of Norristown, which he helped to found thirty-three years ago. Special presentations were made to Dr. Ambler, now director of the hospital's quality assurance department, by **Leonard Becker, M.D.,** and **William Bath, M.D.** Dr. Becker and Dr. Bath are staff physicians at Suburban General and are two of the hospital's earliest interns.

Mrs. Ralph S. Blasiole recently received the Benjamin Rush Award from the Washington County Medical Society for her outstanding volunteer service in cancer prevention. Mrs. Blasiole, president of the Washington unit of the American Cancer Society from 1974 to 1976, has participated in the ACS Volunteer Service Information program since its inception in 1960. She has served for the past several years as chairman of the Washington County Public Education Committee, whose projects have been recognized as outstanding by the Pennsylvania division of the ACS, and as a board member of the county unit of ACS. She was the recipient in 1964 of the Jeweled Sword, the highest award for volunteer service to the ACS.

Physicians on the faculty of the Hahnemann Medical College and Hospital, Philadelphia, have received the following academic promotions: **Allan B. Schwartz, M.D.,** professor of medicine; **Marvin Derezen, M.D.,** professor of medicine; **Sheldon Bender, M.D.,** professor of medicine; **Leslie I. Rose, M.D.,** professor of medicine; **David Prager, M.D.,** professor of medicine; **Lee S. Serfas, M.D.,** professor of surgery; **David Koffler, M.D.,** professor and vice chairman of pathology and laboratory medicine; **Ivan Damjanov, M.D.,** associate professor of pathology and laboratory medicine; and **Frieda G. Gray, M.D.,** professor of medicine and associate vice president for health affairs.

Christopher Matcovic, M.D., was named recently as the first fellow of the Monsour Medical Foundation. Dr. Matcovic's fellowship in infectious diseases will be conducted at the University Health Center of Pittsburgh.

Leo H. Criep, M.D., has been named Distinguished Emeritus Professor at the University of Pittsburgh School of Medicine, where he has been a member of the faculty since 1922. Dr. Criep, who organized and served as director of the allergy clinic at Montefiore Hospital and at the Veteran's Administration Hospital in Pittsburgh, also recently received the Philip Hench Distinguished Alumnus Award from the Medical Alumni Association for outstanding teaching and clinical work.

The medical staff of Lancaster General Hospital recently honored nine physicians who completed the hospital's three year residency program in family medicine. They are Drs.: **Peter J. Altimare,** Millersville; **Richard W. Bacon,** New Holland; **William W. Bakken,** Battle Creek, Michigan; **Hugh W. Brallier,** Ligonier; **J. Peter Gregoire,** Arcade, New York; **Richard Levandowski,** Princeton, New Jersey; **Peter A. Mason,** Richmond, Maine; **Michael S. Rudman,** Middletown, Maryland; and **John H. Surry,** Lititz.

Continued

John P. Hubbard, M.D., president of the College of Physicians of Philadelphia and former president of the National Board of Medical Examiners, and **Walter B. Shelley, M.D.,** chairman of the department of dermatology at the Hospital of the University of Pennsylvania, were recently honored at an international convocation in Uppsala, Sweden. Dr. Hubbard received an honorary doctorate of medicine for distinguished service in medical education. Dr. Shelley was presented with an honorary doctorate of medicine for his outstanding contribution in the field of dermatology.

Carl T. Brighton, M.D., was recently named chairman of the department of orthopaedic surgery and the Paul B. Magnuson professor of bone and joint surgery at the University of Pennsylvania School of Medicine. A professor of orthopaedic surgery and director of orthopaedic surgery research at the school of medicine, Dr. Brighton is chief of the department at the Hospital of the University of Pennsylvania.

David J. Ritchie, M.D., of Wynnewood, was recently named chairman of diagnostic radiology at Mercy Catholic Medical Center in Darby. Dr. Ritchie is a member of the faculties in radiology at the University of Pennsylvania School of Medicine and the Graduate School of Medicine. He has served on the staff of Pennsylvania Hospital for 14 years.

DR. RITCHIE

DR. FREDERICKSON

Howard D. Frederickson, M.D., a York psychoanalyst, has been awarded the Certification of Psychoanalysis in the first group of psychoanalysts to be so certified. Dr. Frederickson is a graduate of the School of Medicine of the University of Buffalo and the Baltimore Psychoanalytic Institute.

*Research by **Chester R. Wilpizeski, M.D.,** professor of otolaryngology at Thomas Jefferson University, has led to the development of a modified CO_2 laser that can be used for surgery of the ear.*

According to Dr. Wilpizeski, "Microsurgery of the human ear is now performed using hard tools—but most, if not all, of the operations involving cutting and drilling may be duplicated with greater control and precision using lasers to vaporize the tissue."

Among the operations which Dr. Wilpizeski says can be performed by laser are: welding tissue grafts onto the eardrum; perforating or removing parts of the eardrum membrane to allow equalization of air pressure between the outer and middle ear or to permit drainage of trapped fluid; removing or cutting the ossicles before reconstructive surgery, or when motion of the bones is impaired by otosclerosis; and excising tumors and scar tissue.

Harry Jay Lessig, M.D., has been appointed director of the department of nuclear medicine at Episcopal Hospital in Philadelphia. Dr. Lessig has taught and conducted research at Lankenau Hospital and the Naval Regional Medical Center and is now assistant professor of nuclear medicine at Hahnemann Medical College Hospital.

Attempting to combat the recent efforts to legalize laetrile, **Stephen Barrett, M.D.,** joined a group of medical and scientific witnesses in Kansas City, Missouri, to testify to the ineffectiveness and possible dangers of laetrile use. Dr. Barrett stated in part, "The real issue is whether our government should protect consumers from all types of ineffective and dangerous remedies." Dr. Barrett, coeditor of *The Health Robbers—How to Protect Your Money and Your Life,* is chairman of the Lehigh Valley Committee Against Health Fraud, Inc., and serves on the Lehigh County and State Society Committees on Quackery.

William J. Martucci, M.D., was certified recently by the American Board of Family Practice. Dr. Martucci is in group practice in Brodheadsville.

Elsie Broussard, M.D., a psychoanalyst and professor of psychiatry and head of the Community Mental Health program in the department of health services administration in the University of Pittsburgh's Graduate School of Public Health, has been appointed by the President's Commission on Mental Health to serve on its newly established eleven-member Task Panel on Prevention. In 1973, Dr. Broussard was awarded the American Psychiatric Association's Lester N. Hofheimer Award for Outstanding Research in Mental Hygiene and for her longitudinal studies of first-born children.

Two physicians on the faculty of Hahnemann Medical College and Hospital received awards during the school's 130th commencement ceremony. **Morrison E. Kricun, M.D.,** Philadelphia, associate professor of diagnostic radiology, received the Medical College Class Award for excellence in clinical teaching. **Gerald A. Melchiode, M.D.,** Glen Mills, associate professor of mental health sciences, received a Lindbach Foundation Award for distinguished teaching.

The 1977-78 officers of the Pittsburgh Obstetrics and Gynecology Society are: **Daniel E. Natali, M.D.,** president; **Frank A. Reda, M.D.,** vice president; **John E. Walker, M.D.,** secretary; and **Robert E. Warner, M.D.,** treasurer.

Two physicians serving their residencies in Pennsylvania recently received Mead Johnson Awards for graduate training in family practice. They are **Michael Kita, M.D.,** a third year resident at Lancaster General Hospital, and **Alan W. Johnson, M.D.,** a third year resident at Sacred Heart Hospital, Allentown.

The Blair County Medical Society recently elected **Thomas T. Skrentny, M.D.,** to be president for 1977-78. Other new officers are **John G. Sheedy, M.D.,** president elect; **Alberto Manetta, M.D.,** vice president; **Betty L. Cottle, M.D.,** secretary; and **Ronald A. Dietrick, M.D.,** treasurer. Appointed to the group's executive committee were **Charles A. Sutton, M.D., Joseph S. Silverman, M.D.,** and **Armando E. Fraire, M.D.**

Eastern Pennsylvania Chapter of the American College of Surgeons
Twenty-Sixth Annual Meeting*
Wednesday, November 9, 1977 Holiday Inn East-Bethlehem, Pa.

Schedule of Events

Registration—8:15-9 a.m.

Morning Session
General Surgery Program
Marfil Room

Presiding Officer
Harry G. Light, M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: Harry Goldsmith, M.O., Samuel Gross Professor of Surgery, Thomas Jefferson University Medical School, Philadelphia, PA., SUBJECT: LIVER SURGERY.

9:45 a.m.: Robert Freeark, M.O., Professor and Chairman, Department of Surgery, Stritch School of Medicine of Loyola University of Chicago, Maywood, IL., SUBJECT: DIVERTICULAR DISEASE OF THE COLON.

10:30 a.m.: Francis O. Moore, M.O., Elliott Carr Cutler Professor of Surgery, Harvard Medical School, Boston, MA., SUBJECT: THE TREATMENT OF BREAST CANCER IN VARIOUS STAGES OF DEVELDPMENT.

11:15 a.m.: Harry H. LeVeen, M.O., Chief of Surgical Service, Professor of Surgery, State University of New York, Veterans Administration Hospital, Brooklyn, NY., SUBJECT: TREATMENT OF TUMORS WITH RADIDFREQUENCY - THERMDGRAPHY.

12:00 p.m.: Cocktails MARFIL RDOM.
12:30 p.m.: Luncheon BALLROOM.
Presiding Officer: Harry G. Light, M.O., F.A.C.S., President, Eastern Pennsylvania Chapter of the American College of Surgeons. SPEAKER: Francis D. Moore, M.D., SUBJECT: "HOW FAST DO WE WANT SURGICAL MANPOWER TO GROW?"

Afternoon Session
Presiding Officer
Stuart H. Irons, M.D., F.A.C.S.
Wilkes-Barre, PA

2:00 p.m.: Resident's Paper.

2:30 p.m.: PANEL DISCUSSIDN MODERATOR: Charles K. Zug, III, M.O., F.A.C.S., Bethlehem, PA.

PANELISTS: Robert Freeark, M.O., Harry Goldsmith, M.D., Harry H. LeVeen, M.D., Francis O. Moore, M.O., SUBJECT: SURGICAL COMPLICATIONS—THEIR AVOIDANCE DR TREATMENT.

4:00 p.m.: CHAPTER MEETING.

Morning Session
Gynecologic and Urologic Program
Sala De Oro Room

Presiding Officer
Frank S. Flor, M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: Earl F. Greenwald, M.O., Associate Professor of Obstetrics/Gynecology, Director of Section of Gynecological Oncology, Temple University School of Medicine, Philadelphia, PA., SUBJECT: CARCINOMA OF THE CERVIX.

10:00 a.m.: Equinn W. Munnell, M.O., Professor of Clinical Gynecology & Obstetrics, College of Physicians and Surgeons, Columbia University, New York, Attending Obstetrician & Gynecologist, Presbyterian Hospital, New York, NY., SUBJECT: CARCINOMA OF THE ENDOMETRIUM.

11:00 a.m.: Joseph N. Corriere, Jr., M.O., Professor & Director, Division of Urology, University of Texas, Houston, TX., SUBJECT: UROLOGICAL COMPLICATIONS FOLLOWING GYNECOLOGICAL SURGERY.

12:00 p.m.: Cocktails MARFIL ROOM.
12:30 p.m.: Luncheon BALLROOM.

Afternoon Session

2:00 p.m.: Panel Discussion and Question-and-Answer Session with Questions Submitted by Audience.

Morning Session
Trauma Program
Darsena Room

Presiding Officer
Charles F. Snyder, Jr., M.D., F.A.C.S.
St. Luke's Hospital, Bethlehem, PA

9:00 a.m.: William P. Graham, M.O., Chief, Plastic Surgery, Hershey Medical School, Hershey, PA., SUBJECT: SOFT TISSUE INJURIES.

9:45 a.m.: Carl T. Brighton, M.O., P.H.O., Professor & Chairman, Department of Orthopedics, University of Pennsylvania. SUBJECT: "THE TREATMENT FRACTURE NON-UNION WITH ELECTRICITY".

10:30 a.m.: Peter Janetta, M.D., Professor & Chairman, Department of Neurosurgery, University of Pittsburgh School of Medicine, Pittsburgh, PA., SUBJECT: THE CEREBELLOPONTINE ANGLE AS PANDORA'S BOX: THE CRANIAL NERVE OYSFUNCTION SYNDROMES.

11:15 a.m.: Felicien Steichen, M.O., President PA. Division, American Trauma Society, University of Pittsburgh School of Medicine, Pittsburgh, PA., SUBJECT: PRESENT AND FUTURE TRENDS IN THE MANAGEMENT OF TRAUMA.

12:00 p.m.: Cocktails MARFIL ROOM.
12:30 p.m.: Luncheon BALLROOM.

Afternoon Session

2:00 p.m.: Felicien Steichen, M.D., PRESENTATIDN DF A CASE OF MULTI-SYSTEM TRAUMA.

PANEL DISCUSSION OF MANAGEMENT: Carl T. Brighton, M.D., William P. Graham, M.D., Peter Janetta, M.D., John Ryan, M.D.

4:00 p.m.: CHAPTER MEETING.

*** in association with the Lehigh Valley Obstetrical Society and the American Trauma Society, Pennsylvania Division.**

As an organization accredited for continuing medical education, the Pennsylvania Medical Society certifies that this continuing medical education offering meets the criteria for hour for hour credit in Category I of the Physician's Recognition Award of the American Medical Association, provided it is used and completed as designed.

Dues increase—really a money saver

One of the most pressing problems facing the State Society's House of Delegates in 1977 is a financial one. Operating costs are steadily increasing and a deficit for 1977 of more than $250,000 can be predicted. Efforts to keep expenses down were applied wherever possible, but several factors raised 1977 costs and indicate a deficit for 1978. A dues increase seems to be a necessity *if the Society is to continue its present activities.*

Most physicians realize that the overhead for their offices has been steadily rising. Malpractice insurance, salaries, and supply expenses are higher each year. Without the State Society, however, the situation for Pennsylvania physicians could be desperate. In 1975, the threatened breach of contract by the Argonaut Insurance Company caused the Pennsylvania Medical Society to take court action to force continuing coverage until 1979. It is true that premiums have increased but this is surely preferable to other alternatives presently available. PMS has been the medical profession's voice at four Pennsylvania Insurance Department rate increase hearings and has, thus far, successfully pared away large percentages from requested rate hikes. Legal and actuarial costs for these actions have not been insignificant.

The formation of the Pennsylvania Medical Cooperative has given physicians an opportunity to cut the cost of office supplies. This will continue to be an invaluable service in the future.

The Pennsylvania Medical Society has been active in the area of legislation. The Society has proposed and supported reform amendments to Act 111. An attempt was made through court action to halt regulation of physician's office laboratories under the Clinical Laboratory Act and a proposed amendment to the Act would specifically exclude these labs. Questions concerning the Motor Vehicle Code, specifically section 1518, were discussed with PennDOT officials. The Society convinced them that the section violated the principle of physician-patient confidentiality and Section 1518 has not been enforced. These actions in behalf of physicians represent only a small portion of much legislative activity. A number of new issues will surface in the next year and will require the Society's attention.

Education has been a major objective of the State Society. With the goal of better quality medical care through educational excellence, PMS has become an accrediting agency of the AMA. This entails the survey of institutions to insure their ability to produce effective, high quality education programs.

All of these activities require the concerted effort of physicians organized in the Pennsylvania Medical Society. Individual physicians cannot accomplish alone what they can together. PMS is our voice to the legislature, the courts, and the people. Our support and active participation are vital.

Medical Editor

Health Department wins praise

It seems to me, in these days especially, that we tend to be hypercritical of those things and those people who attempt to effect change in our daily medical lives and responsibilities.

Our recent experience during the "77 Johnstown Flood" with the Pennsylvania Department of Health (from the secretary, commissioners, deputies, and the forty plus people who were uprooted from all parts of the state to spend two plus weeks here) was a joy to behold and a very satisfying experience for those of us who were involved.

I believe the physicians of this state should think long and hard before they take pot shots at the department without good and valid reason.

John B. Lovette, M.D.

Johnstown

Dr. Lovette, a general surgeon, is vice president of the State Society and will become president elect during the 1977 Annual Session of the House of Delegates later this month.

The physician's role in blood alcohol testing

JAMES M. REDMOND
Harrisburg

Physicians, and particularly those taking care of patients in the hospital emergency department, are often called upon by law enforcement personnel to withdraw blood from persons suspected of operating a motor vehicle while under the influence of alcohol. The situation is one of potential risk for the physician and the hospital. Both should be familiar with Pennsylvania law on this matter.

The Pennsylvania law which deals with the withdrawal of blood from a person for the purpose of determining alcohol content in motor vehicle cases is found in the Vehicle Code (75 P.S. §1547 Chemical Tests to Determine Amount of Alcohol). This law was recently revised and many of its new provisions became effective July 1, 1977. According to this law (§1547 (a)):

Any person who operates a motor vehicle in this Commonwealth shall be deemed to have given consent to a chemical test of breath or blood for the purpose of determining alcohol content of blood if a police officer shall have reasonable grounds to believe the person to have been driving a motor vehicle while under the influence of alcohol. The tests shall be administered by qualified personnel with equipment approved by the Department. Qualified personnel means a physician or a technician acting under the physician's direction or a police officer who has fulfilled the training requirements to use such equipment in a training program approved by the Department.

This may seem to be quite straightforward; however, further examination reveals that the law recognizes the right to refuse to submit to the test. In section 1547(b), the law states:

If any person placed under arrest for driving under the influence of alcohol is requested to submit to a chemical test and refuses to do so, the test shall not be given but upon notice by the police officer, the Department shall suspend the operating privilege of the person for a period of six months or revoke the operating privilege of the person for a period of one year for a second or subsequent refusal within a period of three years.

It is imperative that physicians and hospital staff understand this option of refusal provision. When it is exercised, the refusal should be honored.

When blood is withdrawn for the purpose of determining its alcohol content in motor vehicle cases, the law requires that a physician or a nurse or technician acting under a physician's direction withdraw the blood. The chemical analysis of blood taken under these circumstances is admissible in evidence just as are the results of a breath chemical test. It is important to note that pursuant to the statute a person must be physically unable to supply enough breath to complete a breath test before a blood test can be ordered.

When chemical analysis of breath or blood shows that the amount of alcohol by weight is 0.05 percent or less, the person tested is not under the influence of alcohol. If the amount of alcohol by weight is in excess of 0.05 percent, the person is not necessarily under the influence of alcohol, but this evidence may be submitted along with other proof to determine whether a person was under the influence of alcohol. If the amount of alcohol by weight is 0.10 percent or more, it is presumed that the person is under the influence of alcohol.

Anyone who is requested by the police to submit to such a test may ask a physician of his choice to administer an additional breath or blood chemical test. These results are admissible in evidence. The law further states, however, that the chemical test given at the direction of a police officer shall not be delayed by a person's attempt to obtain an additional test.

Physician's liability

A recent revision of P.S. 1547 includes a new section which recognizes the special involvement of a physician, nurse, or hospital in assisting the police in these cases. Subparagraph (j) Immunity From Civil Liability On Reports states that:

No physician, nurse, or technician or hospital employing such physician, nurse, or technician, and no other employer of such physician, nurse, or technician shall be civilly liable for withdrawing of blood and reporting of the test results to the police at the request of a police officer pursuant to this section.

The physician, nurse, and hospital are protected when withdrawing blood and reporting results in these particular cases. It is important to note, however, that this immunity may not apply if the person first refuses to submit to such a test but, upon insistence of the police or law enforcement officer, the physician or nurse proceeds to administer the test. The law is clear in recognizing the right to refuse to submit to the test.

Guidelines for testing

Because of the various legal ramifications and problems associated with the withdrawal of blood when alcohol intoxication is suspected, the Hospital Association of Pennsylvania has developed, in consultation with its legal counsel, the following set of guidelines for physicians and hospital personnel.

Reasons for request:

1. Medical—In the course of administering proper medical care, a physician may order the withdrawal of blood for the purpose of determining alcohol content.

2. Legal—In cases of suspected alcohol intoxication, the withdrawal of blood for the purpose of determining alcohol content may be requested by a police officer if the person is physically unable to supply enough breath for a chemical test of his breath.

Procedure for request: A police officer must request the test when it is not required for medical reasons. The request does not have to be in

Mr. Redmond is vice president for shared services of the Hospital Association of Pennsylvania.

If a patient is unconscious and thus cannot consent, and blood withdrawal is requested by the police for legal purposes, the physician may comply or refuse. Immunity under such circumstances is probable, but not certain.

Fred Speaker
Legal Counsel
Pennsylvania Medical Society

writing, but the hospital has this option.

Consent:

1. The person must agree to the withdrawal of blood for the purpose of determining alcohol content.
2. A special consent form is recommended.
3. If the person refuses to submit to the test, none shall be given.
4. In the event that the person is unable to give consent because he is unconscious, dead, or incapacitated, the withdrawal of blood for the determination of alcohol content may be performed at the request of a police officer, or if the physician in his best judgment feels that the test is required to save life or reduce harm to the person's health.

Other considerations:

1. A person under arrest and a person not under arrest have the same rights and may refuse to submit to the test.
2. Only a physician or a nurse or technician acting under his orders may withdraw blood.
3. In legal situations, it is important that a chain of evidence be maintained. A method should be established to insure that all persons who are responsible for keeping or handling the blood sample can be traced easily.

Thus, a physician always has the privilege to order a blood alcohol test for medical purposes with the patient's consent. In cases in which the purpose is clearly to provide evidence for determining alcohol intoxication while driving a motor vehicle, a police officer may request a blood alcohol test if the person is physically unable to provide enough breath for a breath test. If the person refuses to submit to such a test, no test should be given. If the person is unconscious or otherwise incapable of giving consent, the police officer's request for performance of a blood alcohol test, if honored, would seemingly afford immunity from civil liability to the physician and his assistants if the police officer attests that he has reasonable grounds to believe that the person had been driving while under the influence of alcohol. □

book review

Pittsburgh pediatricians' book fills education gap

DAVID A. SMITH, M.D.
Medical Editor

The Style and Management of a Pediatric Practice, by Lee W. Bass, M.D., and Jerome H. Wolfson, M.D., Pittsburgh, University of Pittsburgh Press, 1977. $3.95 paper, $7.95 cloth.

This little book is a real find. Unfortunately, most residencies devote negligible time to the young doctor's education on how to organize a practice. Drs. Bass and Wolfson have attempted to describe the style and management of their practice with special reference to "how to" problems and solutions which will face the young pediatrician. They have made many valuable suggestions but indicate that there are other possible techniques. This is a description of their "very personal style of pediatrics."

In the preface, the authors state that they consider this book a supplement to medical education. Seven chapters, beginning with "The Doctor-Patient Contract" and ending with "A Doctor's Fears," succinctly review the components of a pediatric practice. The chapter on "Office Design, Staff, and Procedures" offers helpful and time saving hints covering a wide range of topics. Procedures for appointments, telephone, office laboratories, and collection and billing are detailed. Suggestions for interior design of waiting rooms as well as placement of equipment in examining rooms are well thought out and very practical. "Providing Care," chapter 4, reviews the common everyday problems of a pediatric practice. It emphasizes the need for patient (parent) education to your methods.

A recurring theme throughout the book is the need to establish precedents early. Telephone, hours, fees, and personnel are likely areas for problems to occur if you do not do so. Once established, precedents are extremely difficult to change.

The book is well illustrated, charts and pictures depicting what has been described in the text. Addresses have been included for furniture, equipment and supply companies when specific products have been found useful. References are adequate.

practice management

Successful group must agree on basic philosophy

LEIF C. BECK, LL.B.
VASILIOS J. KALOGREDIS, J.D.

Bala Cynwyd

We have previously described various methods of dividing income in a group practice. The consideration of how the doctors in a group will share in income earned by their joint endeavors is obviously essential.

Our experience has shown that an inability to satisfactorily divide income causes more dissolution problems in medical groups than all other factors combined. This does not necessarily mean that physicians are overly money-oriented. Unfortunately, a primary cause is the fact that compensation is a common measure of relative personal worth or value. Therefore, the double-barreled aspects of economics and ego often cause income division policies to be a very touchy item in group practices.

Physicians practicing together, whether as partners or corporate shareholder-employees, find that group practice involves a number of considerations absolutely new to former solo physicians. The physicians involved may refer to their advisors for guidance regarding proper relationships, but they should recognize that no standard format will work for every group. Partnership details that are established for one satisfied group of doctors may be inappropriate for another group because of differences in medical specialties, styles of practice, professional philosophies, personal economic needs, ages, and personalities.

We recognize the individuality of each prospective group and prefer to review with the doctors involved the considerations which should be openly discussed and agreed upon among them. The items described below are intended to be useful both for doctors planning a joint practice and for members of existing groups interested in re-analyzing their present relationships.

Philosophy toward group practice

The most important prerequisite for a successful group practice is for the doctors involved to have a solid understanding and appreciation of how they are going to work together. If they do not agree on their basic attitudes toward medical care, interchanging of patient responsibilities and the like, their relationship is unlikely to be a successful or lengthy one. For this reason, we encourage clients considering joining together to discuss at great length their philosophies toward medicine in general and toward group practice in particular.

In some circumstances, these discussions may require hours of already scarce physician time. These hours are well spent, however, for they can help to avoid the heavy financial, emotional, and time costs of a later dissolution.

An important item to discuss is the handling of patient responsibilities. There are basically two extremes, and the group may agree to handle things at or between these two poles.

At one extreme is the "true group" practice. In a "true group," all patients are those of the entity; no patient is the particular responsibility of any one physician in the group. Scheduling of patients is based simply upon doctor availability. All patient records are merged into a single system with no separation or coding by "responsible physician."

This "true group" approach has the advantage of allowing all members of the group to develop some experience with each patient. It also permits the doctors to divide the patient load as equitably as possible, thus reducing any overload on one doctor at a time when one or more of his associates might be less busy. The major disadvantage is that each doctor may have less continuous personal contact with a single patient. Some doctors feel this reduces the quality of care they can render.

At the other extreme is a strict and individualized division of patient responsibilities. In such a situation, the group practice offers expanded opportunities for coverage and professional peer consultation, but little else. A patient's regular appointments are scheduled only with his "regular" doctor. Sick visits, emergencies, and night and weekend hospital visits may be handled by any partner scheduled for that time. While the doctor's ongoing personal contact and experience with a patient is the advantage of this system, a disadvantage is his associates' comparative lack of background in case of an emergency.

We cannot tell a group which approach it should choose or what "mix" of the two extremes will best suit it. However, we are amazed at the number of doctors who embark upon group practice without a real understanding of how they want to share patient responsibility. This is an important first step to explore in considering any joint practice relationship.

Partnership or corporation?

Physicians planning to merge their practices often seem overly concerned about whether their newly formed venture should or should not be a corporation. While it is an important decision, it can and should be deferred until other details have been settled. In many instances, the form in which the merging practices are operating will be determinative.

The authors are the principle consultants of Management Consulting for Professionals, Inc., Bala Cynwyd.

Unless the legal, economic, tax, and practical aspects strongly favor corporate form, we often prefer to have the new group start out as a partnership. A major reason is that it is much easier to dissolve a partnership than a corporation. If the doctors' venture into group practice proves to be unwise and a decision is made to dissolve it after a year or two, they will minimize their legal and economic frustration if only a partnership is involved. Therefore, it may be desirable to avoid the corporate form until the members' capacity to work together satisfactorily has endured a reasonable amount of time. A delay of as little as six months represents relatively minor tax differences when compared to the importance of assuring a satisfactory long-term working relationship.

There may be advantages to a partnership from a tax point of view. In many instances, a new office with new equipment, furniture, and other assets is required. By starting out as a partnership, investment tax credits, excess depreciation, and perhaps even some tax losses may flow through to the partners for the first few months of the relationship. These tax savings would not be forthcoming through a regular corporation. Once again, each potential situation must be looked at on a case-by-case basis. We have seen many instances in which the corporate step was deferred for six months or a year so that the partners could take advantage of these tax breaks.

The corporate form may be most successfully used for the new practice when one or more of the incorporating practices has been operating in this way. As a general rule, practices in this situation are better served to retain their corporate form in order to avoid potential legal and tax difficulties.

Group income

It is apparent that openness and communication among physicians in a practice is most important. This is particularly true in determining the definition of group income. Prior to the start of the relationship, the doctors involved must understand what percentage of income earned by each is to be shared by the group and what is to be personal income.

There are basically two approaches to making this determination.

One extreme is to include all income from medical activity, however earned, as group income. This theory would include as group income whatever a physician earns from his hospital positions, medical teaching, or writing on medical subjects, whether or not such work is performed during "regular practice time." It is based upon the notion that a partner should perform all medical work only on behalf of the group practice. Any outside medical activity may (and unfortunately often does) directly or indirectly affect his efforts for the practice.

The other extreme is to include as group income only those funds generated within the practice and recorded on its books (generally only from patient services). This approach recognizes that the group should give each member his own free time away from the practice and that how he uses his "spare time" is his own business. For this reason, if he decides to use his free days, weekends, or vacations writing a medical article or doing medical work for a charitable organization, he should be able to do so and retain whatever income his extra efforts generate.

While we work with groups that use both approaches, most tend toward the former extreme. The thinking has generally been that a physician in a busy medical practice has little or no true "spare time" for such endeavors. In addition, including them in a total or partial productivity income division formula can often help to permit the activities and still give the income advantage to the doctor who chooses to do that work.

Once again, either approach can work well when the members agree. The important thing is to discuss the two extremes, explore the range of middle possibilities, and make the decision honestly and realistically, considering the members' personalities, activities, and professional attitudes.

Expenses of the group

Just as a formula for "practice income" and personal income must be established, so the physicians in a group practice must understand which expenditures are "practice expenses" and which are to be paid personally. Items such as office rent and staff payroll are almost always treated as group expenses, but a variety of other items require express advance agreement. These include automobile expenses, malpractice insurance premiums, society dues, medical books and journals, travel and entertainment expenses, and education expenses.

Once again, attitudes toward these items vary widely. Some groups run all expenses through the practice after having agreed that they are for the group's benefit. In some cases, advisors have unfortunately suggested that the listed expenses are more easily tax deductible by a partnership or corporation than on a doctor's personal income tax return. This is not true, for the items are equally deductible or non-deductible in both situations. The insistence on this tax approach too often submerges the doctors' real economic feelings until they later arise as disputes.

Other groups exclude a number of these expenses. Their attitudes recognize that the doctors' tastes will and should vary enough that each partner should be free to spend as much or as little on the items as he wishes without concern over his partners' spending levels. One illustrative item is the choice of automobiles. If one physician has more expensive tastes than another, the cash outlay could be substantially different and possibly divisive.

Some practices prefer to pay as much as possible through the practice, while still recognizing the potential for dramatic differences among members of a group. Thus, they take a solid middle position. Their agreements provide a stated dollar maximum for each category above which a physician must pay personally. Still others take a different middle approach and have the practice pay for all such expenses. They keep track of them by doctor on a "side sheet." Any substantial differences among members are made up by means of bonuses or other adjustments.

All of these approaches have worked well for different groups. No one works for all practices. The important thing is to make an informed decision and to follow it honestly, for many problems may arise if the expenses are loosely handled. □

How to put the gold in 'golden years'

DONALD L. DeMUTH, M.B.A., C.P.A.

EDWARD H. ACHORN, M.Adm., C.P.A.

Harrisburg

It is often asserted that retirement plans—individual retirement accounts, Keogh plans, and professional corporation pension and profit sharing plans—have the drawback of turning capital gains into ordinary income. This charge is leveled because the gain upon selling capital assets, stocks, and bonds owned more than nine months in 1977 (over a year after New Year's Day 1978) is taxed at half the rate of ordinary income up to a maximum of 25% of the gain. By contrast, money received from a retirement plan, which includes capital gains on retirement plan investments, is taxed as ordinary income when distributed.

This article demonstrates that virtually all physicians will end up with more after-tax dollars by contributing to a retirement plan than by making investments which are taxed at favorable capital gains tax rates.

The justification for this statement is simple. If a general practitioner in the 45% income tax bracket attempts to invest $2,200, he must earn and collect $8,000 from patients, since overhead typically consumes 50% of his collected charges. After taking care of overhead, he has $4,000. However, Uncle Sam has not yet taken his chunk of $1,800 ($4,000 x 45%). This leaves the doctor with $2,200 available for investment out of the original $8,000 collected.

Mr. Achorn is assistant professor of accounting and management and Mr. DeMuth is assistant professor of accounting and finance at The Pennsylvania State University's Capitol Campus, Middletown. For reprints write to Mr. Achorn or Mr. DeMuth at The Pennsylvania State University, The Capitol Campus, Middletown, PA 17057.

Contributions to a retirement plan, on the other hand, are not taxed at all. Thus, the entire $4,000 contribution to the retirement plan can be invested. If the doctor makes the personal investment and the retirement plan investment in the same security, which is the only fair comparison, and it appreciates at an 8% compounded annual rate for ten years paying no dividends, the personal investment will grow to $4,750 while the retirement fund will swell to $8,636. If the retirement plan investment is sold and the money is distributed to the physician, he will have to pay 45% of it as income tax (if he is still in the 45% bracket). This leaves him with $4,750 or the same amount as the personal investment has become, to spend after paying income tax.

However, the comparison is not complete at this point. If the doctor liquidates his personal investment, he must pay a 22.5% (half of 45%) tax on the $2,550 difference between the $4,750 selling price and the $2,200 purchase price, or $574. This leaves him with $4,176 after paying capital gains tax on his personal investment. The doctor ends up with $4,750 when making the investment in his retirement plan and $4,176 when making a personal investment.

Notice that in this example the doctor has the same tax bracket during retirement as during his practice years. It is more likely that his tax bracket will fall during retirement. Should this occur, the retirement plan investment alternative becomes even

TABLE I
Return on Personal Investment

Tax bracket	62%	58%	55%	50%	48%	45%	42%	39%	36%	32%

In 10 years investment would grow to: (8% compounded annual growth)	$8,636	$8,636	$8,636	$8,636	$8,636	$8,636	$8,636	$8,636	$8,636	$8,636
Income tax[1] on retirement benefit	(4,318)	(4,318)	(4,318)	(4,318)	(4,145)	(3,886)	(3,627)	(3,368)	(3,109)	(2,764)
Spendable cash	$4,318	$4,318	$4,318	$4,318	$4,491	$4,750	$5,009	$5,268	$5,527	$5,872

[1]*The maximum tax on retirement benefits is usually 50%.*

more financially advantageous.

While it is possible that the doctor's income tax bracket will rise when he retires, this will probably occur infrequently. If it does significantly rise, it is possible that the personal investment will yield more than the retirement plan. Again, this would be the exception.

If part of the return is received in the form of dividends or if the investments are sold before retirement, the benefit of having the investment in a retirement plan becomes greater yet. Retirement plan investments become even more favorable because dividends are taxed to individuals when they are received and capital gains tax is paid when an individual sells a capital asset profitably. However, dividends received and capital gains copped in retirement plan investments will not be taxed until distributed to the doctor during his retirement. The fact that dividends and realized capital gains go untaxed in a retirement plan allows the portion that would be lost in income taxes to continue earning and appreciating.

The accompanying tables compare an investment of $4,000 in a retirement plan with a personal investment for a ten-year period for all except medicine's highest and lowest earners (see *Medical Economics*, "Doctors' Earnings: Winning the Battle, Losing the War," November 10, 1975).

Remember, you may prefer to make personal investments now, but you may expect to have more money during your golden years if you use a retirement plan. □

ORTHOPAEDICS FOR THE PRIMARY CARE PHYSICIAN

Friday-Saturday-November 11-12, 1977

Problems related to the muscular skeletal system are among the most common illnesses seen by primary care physicians. However, many doctors are unfamiliar and uncomfortable with the management of these problems. This course is designed to assist physicians in the recognition, examination and treatment of common orthopaedic problems encountered in the office. (The staff will be members of the University faculty. Topics will include the basic pathophysiology of common diseases of the joints, examination and diagnostic techniques, and treatment modalities which are available for office practice.)

Course Director:
Paul A. Lotke, M.D.
Assistant Professor
Department of Orthopaedic Surgery
University of Pennsylvania

Medical Education Day in Pa

A program for physician educators, allied professionals, and audiovisual specialists.

Thursday, November 17, 1977 Hershey Motor Lodge

The following two days the American Medical Association will present twelve post-graduate courses for physicians at the same location.

Morning for Physicians:

10:00 a.m. *"THE CHANGING ROLE OF THE DME"*

Pennsylvania Association for Medical Education. The results of a 1977 survey of medical educators in community hospitals as to their changing status will be discussed. Jack H. Hall, M.D., Indianapolis, Indiana.

Morning for the Allied Professional:

9:45 a.m. Business Meeting, Pennsylvania Council of Health Professionals.

10:30 a.m. "Where in Health Are We Going? — A Declaration of Interdependence" Ralph C. Kuhli, M.P.H., Director of Allied Health Evaluation, American Medical Association, Chicago, Illinois.

Noon: Group Luncheon by Reservation Only, $6.00.

Afternoon:

1:00 p.m. "Use of Audiovisuals in Community Hospital Education" Earl J. Bauer, Bauer Audio Video, Inc., Dallas, Texas, and author of "Pro's Guide to AV," *Successful Meetings* magazine. Pennsylvania Medical Society Conference on Education open to all attendees of morning session and those who are specifically interested in attending this session

4:00 p.m. Adjournment

As an organization accredited for continuing medical education the Pennsylvania Medical Society certifies that this continuing medical education offering meets the criteria for three credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association, provided it is used and completed as designed.

Please register the following: (please type or print)

Name _____ Position _____

From the Office of: _____

Telephone: ( ) _____

Address _____

Specialty _____

City _____ State _____ Zip _____

I will attend the following:

_____ Pennsylvania Association for Medical Education, 10:00 a.m.

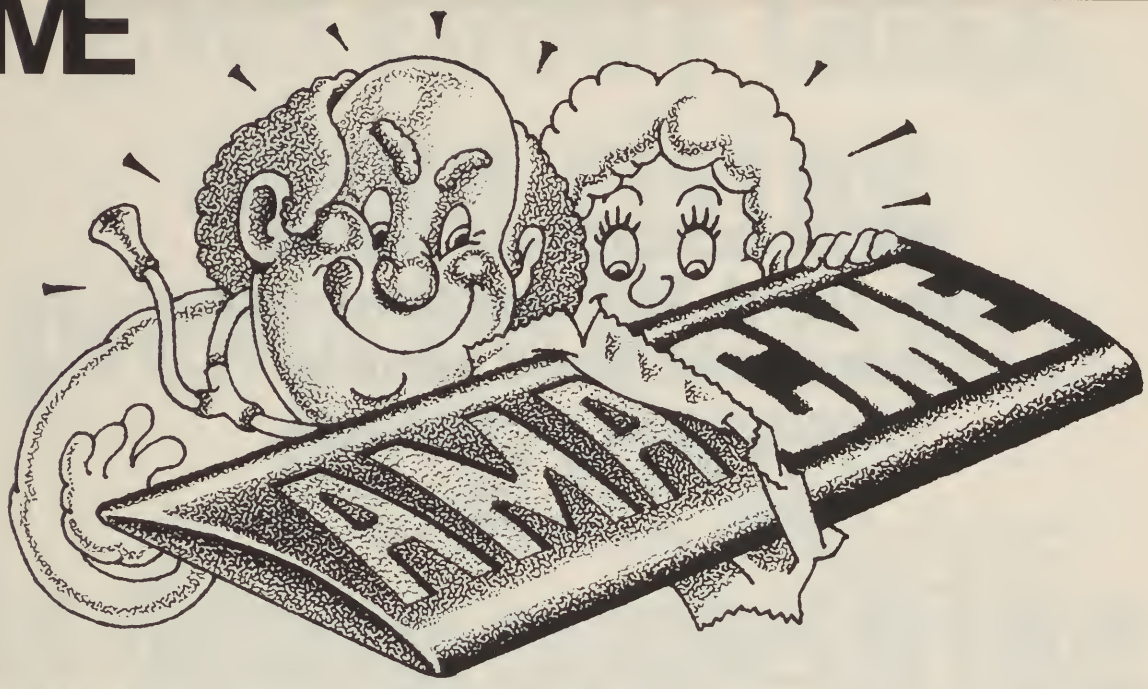
_____ Pennsylvania Council of Health Professionals, 9:45 a.m.

_____ Group Luncheon ($6.00 fee is enclosed, check made payable to Pennsylvania Medical Society)

_____ Use of Audiovisuals in Community Hospital Education, 1:00 p.m.

There are no tuition charges or registration fees for these programs since they are being provided under the funding auspices of the membership fees of the sponsoring organizations. For further information call Pennsylvania Medical Society, (717) 238-1635 or write, 20 Erford Road, Lemoyne, PA 17043.

CME



AMA brings CME to Hershey

AMA Regional CME Program — Nov. 18-19, 1977

AMA has greatly expanded its continuing medical education programs, an important service to member physicians. A regional CME meeting is scheduled at Hershey Motor Lodge, West Chocolate Ave., Hershey, PA 61703. Non-AMA members are welcome.

This meeting has been developed by the AMA in cooperation with Hahnemann Medical School, Jefferson Medical College, Medical College of Pennsylvania, New Jersey Medical School, and the medical schools of Howard University, Penn State University, Rutgers University, Temple University, University of Pennsylvania, University of Pittsburgh, and the Pennsylvania Medical Society.

AMA BRINGS CME TO YOU . . .

- A clinically directed syllabus for each course.
- Individual attention to questions—class sizes are limited.
- All courses approved by the AMA Council on Continuing Physician Education for Category 1 credit towards an AMA Physician's Recognition Award.

CME Courses Offered at Hershey Meeting

FRIDAY, NOVEMBER 18, 1977 (Each 6 Hours)

P-1. Proper Selection of Antibiotics
P-2. Dermatology for Nondermatologists
P-3. Medical Ethics: Euthanasia & the Doctor-Patient Relationship
P-4. Neonatology
P-5. Financial Management Colloquium (This colloquium **only** is CME Category 2.)

FRIDAY & SATURDAY, NOVEMBER 18-19, 1977 (16 Hours)

P-6. Basic & Advanced Life Support (Cardiopulmonary Resuscitation—CPR)

SATURDAY, NOVEMBER 19, 1977 (Each 6 Hours)

P-7. Alternate Lifestyle
P-8. Drugs of the Decade
P-9. Ambulatory Care of Pulmonary Disease
P-10. Current Advances in the Treatment & Research of Cancer
P-11. Acid-Base, Fluid, & Electrolyte Balance
P-12. Auscultation

AMA's Winter Scientific Meeting
Miami Beach, Florida December 10-13, 1977

For specific information, please write:

AMA Department of Meeting Services
535 North Dearborn Street
Chicago, Illinois 60610

Misconceptions about the 1976 Tax Reform Act can cost your family thousands of dollars

The recent complex tax law has created confusion and misunderstandings in the minds of many men and women regarding estate and gift taxes.

Although most people with estates of $500,000 or more recognize the continued need for tax-conscious wills, many with estates somewhat smaller have erroneously assumed that the new estate-tax rules will automatically allow everything to remain in the family.

They fail to realize that the new law gives many married couples the opportunity to eliminate or sharply reduce their Federal estate taxes—but only through careful planning.

To contrast the costliness of leaving a spouse everything outright in a will with the tax savings possible through trust plans, consider these examples. (Assume both husband and wife die after 1980, husband first. State taxes have been allowed for.)

ESTATE	Husband leaves "simple" will FEDERAL ESTATE TAX	Husband leaves will with tax-saving trust FEDERAL ESTATE TAX	POSSIBLE TAX SAVING WITH TRUST PLAN
$250,000	$21,400	-0-	$21,400
300,000	37,200	-0-	37,200
400,000	68,000	$13,200	54,800

In addition to tax savings, a trust plan can provide the valuable benefits of experienced asset management and flexibility of payments for the wife and children.

Pittsburgh National Bank has prepared a special folder, "Planning for the Moderate-Sized Estate," to explain tax savings and other opportunities now possible with thoughtful trust planning. We will be glad to send you a copy.

PITTSBURGH NATIONAL BANK

PITTSBURGH'S OLDEST TRUST COMPANY

Mr. Burton S. Holmes

Everybody talks about rising prescription costs. PUREPAC is doing something about them.

Up to 30% of prescriptions are not filled because of their high cost.

Many of these unfilled prescriptions are for elderly patients on limited budgets who require several medications. And most of their prescriptions require constant refills.

What can be done? When you write your next prescription, specify a Purepac generic.

Purepac is readily available, and can keep your patient's prescription costs down as much as 77.3%.

Purepac has completed bio-availability studies wherever required.

See how much your patients can save with Purepac generics:

Up To 77.3% Savings For Your Patient

QUANTITY	BRAND NAME	PRICE*	PUREPAC GENERIC	PRICE*	SAVINGS
30	Polycillin	$8.70	Ampicillin	**$2.40**	**$6.30**
100	Equanil C IV	9.70	Meprobamate C IV	**2.20**	**7.50**
100	Darvon Comp. C IV	7.83	Propoxyphene HCl C IV	**4.63**	**3.20**
100	Pavabid	11.73	Papaverine HCl T.R.	**4.33**	**7.40**
100	Thorazine	6.03	Chlorpromazine HCl	**3.23**	**2.80**
100	Librium C IV	9.50	Chlordiazepoxide HCl C IV	**4.60**	**4.90**

*Prices selected from newspaper ads.

The savings add up! So, when you prescribe generics, specify Purepac, the largest generic manufacturer in America.

Bio-availability data and generic reference chart are yours upon request.

PUREPAC
Elizabeth, NJ 07207
AMERICA'S LEADING NATIONAL BRAND OF GENERICS

Kefzol® I.M./I.V.

Computers and medicine

How to decide on a computer

EDWARD H. ACHORN, M.Adm., C.P.A.
Harrisburg
DONALD L. DeMUTH, M.B.A., C.P.A.

The answer to the question of using a computer, whether "in-house" or "out-house," frequently lies in the style of management and not in answers to simple questions.

Technology is advancing rapidly—mini computers are making possible many more in-house installations. According to the July 12, 1977, issue of *Business Week*, the microcomputers are retailing under $1,000. While it is unlikely that they are adaptable to broad commercial application, it is obvious that computer power is now available in one form or another at any level.

How does one decide which way to move—if at all? The first step is usually a cost/benefit analysis, otherwise known as a feasibility study.

Such a study is the topic of many lengthy articles. This article is intended to acquaint the reader with the workings of a feasibility study as well as the reason for it.

The study should provide documented answers to the following questions: How is the work presently performed? What work is to be performed? How is it to be performed? What will it cost on a going basis (continuing cost)? What will it cost to get there (conversion cost)?

Many managers—not just physicians—are tempted to make two fatal mistakes at this point. They are: to assume that the computer is the answer to all their problems; and to avoid being involved in the details. The first assumption is just plain false. The second may be possible if someone on the staff is delegated the responsibility; even so, the physician must maintain a degree of involvement to the point of understanding what is happening. Short of this, disappointment will be the result.

Current operational analysis

The first step is a detailed step by step analysis of business operations. This study should outline—as a minimum—the following: present volumes; detailed procedures in all cases; and itemization of the strengths and weaknesses of the present system.

The volumes to be developed should include (but not necessarily be limited to):

1. Number of patient visits.
   a. By hour.
   b. By day.
   c. Reasons for variations.
2. Number of patients, active.
3. Number of patients, total.
4. Number of medicare claims.
5. Number of Blue Cross claims.
6. Number of other carrier claims.
7. Number of cash receipts, together with payment patterns.
8. Number of cash visits.
9. Number of patient statements.
10. Statements to each patient or to responsible party.
11. Number of no show appointments.
12. Number of claim resubmissions, and patterns of reasons.

One of the benefits of such a study should be the discovery of inherent weaknesses in the present system, with appropriate corrective measures—even before using a system.

Another benefit should be that of ferretting out the strengths to insure they remain strong, and that they or their equivalents are included in the new system.

Such a study may be difficult for the physician to perform. It is time consuming, and pains-taking; yet it should be done. If the physician feels he does not have the time, he should invest in the time of a professional to do it for him. Thereafter, he should review the results—and understand them.

The authors are on the faculty of the Pennsylvania State University's Capitol Campus, Middletown. Mr. DeMuth is an assistant professor of accounting and finance and Mr. Achorn is an assistant professor of accounting and management.

Identify the objectives

The next step should be to identify the objectives of a computer system. Such objectives should have associated with them a relative priority. Some may be a "must." Some may be icing on the cake. All will cost money; therefore, it is essential that they be rated, and the relative cost of providing them should be determined. This will insure the maximum cost performance effectiveness. Such objectives might include:

1. Statement billing monthly.
2. Aged accounts receivable.
3. Medicare billing.
4. Blue Cross and other carriers' billing.
5. Billing statistics.
6. Collection letters.
7. Annual statements to patients for tax purposes.
8. Automatic pricing based on procedure codes.
9. Automatic finance charges.
10. Statement messages to patients.
11. Response time requirements. (Of extreme importance in determining machine requirements.) Example: For purposes of inquiry, if the physician is willing to use last week's Trial Balance and add to it any recent visits from the items unprocessed, he can save money and perhaps use a service center in lieu of in-house equipment. This is a difficult process to understand; however, it is essential to understand the consequences as a part of the process of determining what is acceptable.
12. Extent to which patient records are to be used. If merely for billing, a limited record will suffice. If the intent is to carry referral information, some degree of history, etc., storage requirements increase dramatically.
13. To whom should the computer be available? If one inquiry station will suffice, this translates to dollars. If one is required for each physician in the office, this translates to increased dollars. One inquiry station may be

secured for as little as $3,800, but when the related componentry is included to handle all complexities, its overall cost could run as high as $12,000. Then, too, distance can complicate matters. A cathode ray tube within 30 feet will probably be no problem, but put it across town and it becomes costly—line charges, and communication gear.

Is there a need to establish objectives and priorities? If cost is no object, it is probably not necessary; however, it is seldom the case.

One unique approach to establishing priorities and objectives is to go for the ultimate—that is what we all want. Once the ultimate is established, then repeatedly ask the question, "What does this cost?" Seldom will one find a computer salesman who will do this; when one does, the choice is made. Let him work for you in answering the questions. When the answers are forthcoming and the decisions made, give him the order and proceed. He deserves it, for he has done most of the work.

Another common approach is to establish the maximum amount which you are willing to spend—labor and computer. Then ask the computer salesman how you can get within that range. Be assured that he will find a way. The important thing to remember is that the physician is giving something up to reach that range. Know what is being given up. Is it worth it? Is it only temporary? Will it have to be added later? Is it acceptable?

Vendors' proposals

The next step, assuming the approach mentioned in the preceding paragraphs are not used, is to entertain proposals from vendors. One of the purposes of in-depth analysis of the present system is to establish volumes. The purpose of the next step is to establish objectives and priorities; these should be made available to the vendors.

In your request for proposals, ask the machine vendor to provide the following information:

1. Components Required—purchase price; rental prices and terms; monthly maintenance; total or separate maintenance responsibility? (If split responsibility from multiple vendors, how are questions resolved?)

2. Names of users in your area; refer to at least two. Talk with both machine and top-level non-machine personnel.

3. Support personnel available in your area.

4. Delivery schedule.

5. Software availability. (If package programs, the price? Is it supported? Who owns the programs?) Cost of maintenance programming. (Careful—this is extra. Be meticulous in spelling out the possibilities—rates and responsibilities.)

6. Sample contract. What does it cover? Some vendors will guarantee only that the machine is in operable condition, and no more. Will they make the proposal a part of the contract?

7. Overall procedural flow.

8. Conversion plan and costs and Pert chart to illustrate.

9. If off-line, the effort required to go on-line.

10. Environmental requirements.

11. Suggested programming language. To what extent is it compatible with other hardware? Theirs? Others?

12. Backup facilities. Where can you locate backup in the event of a catastrophe? Determine specifically that machine specifications are compatible.

13. Whose responsibility for testing programs?

14. What are the options if the thing doesn't go as planned?

The service center should be asked to provide answers to the following:

1. Is the firm solvent?

2. Does the firm have knowledgeable talent on its staff—not just computer experts, but people who can talk your language?

3. The names of several present users—again, follow up with key people to insure their quality.

4. Visit their installation. Is it orderly? Are they courteous?

5. Conversion plan costs and Pert chart—can it be amortized?

6. Who owns programs?

7. Who owns data?

8. Whose responsibility for testing programs?

9. Price schedule—normal jobs and special jobs.

10. Schedule and turn around time.

11. What are the potential extra charges?

12. What are the maintenance programming charges?

'Many managers–not just physicians–are tempted to make two fatal mistakes: to assume that the computer is the answer to all their problems; and to avoid being involved in the details.'

---

13. What are the options if the thing does not go as planned?

Evaluating proposals

The next step is the evaluation of the proposals—probably the most difficult because seldom is it possible to match apples and apples.

By answering the following questions, certain choices can be narrowed:

Should I go in-house or service center?

Are there any traps which lock me into this vendor? (Data compatibility; program compatibility; expansion and contraction possibilities.)

What are the economics of the choices?

Will I have the support of the organization? (Be specific—will they make it contractual?)

Once the choices are narrowed down to one or two, an examination of the organization behind the proposal is important: Do they understand your needs; are they capable of supplying them? Beware of the salesman who seems to have all the answers. He is an unusual breed if he does.

Once the selection is made, it is common courtesy to notify all interested parties. At this point, since you have been objective, you will now have to be firm. Do not look back once you have made the decision. Notify the vendors and become unavailable; then pick up your conversion plan and Pert chart and proceed. □

Review of the literature

Complications associated with mediastinoscopy

CHONG M. LEE, M.D.
Youngstown, Ohio

LARRY B. GROSSMAN, M.D.
Hershey

Surgical entry into the superior mediastinum for therapeutic purposes has been practiced for decades. In 1899, Heidendain[1] performed the successful drainage of a mediastinal abscess; and in 1901, von Hacker[2] described a technique of mediastinotomy for surgical treatment of mediastinitis.

Despite the surgical knowledge, the entry into the mediastinum for a diagnostic measure was not developed until the 1950s. In 1948, Daniels[3] first introduced a technique of prescalene node biopsy. Subsequently, in 1954, Harken, *et al.*,[4] described cervicomediastinal exploration for tissue diagnosis of intrathoracic diseases. They considered that their procedure was useful and carried no serious complications.

In 1959, Carlens[5] introduced a midline mediastinoscopy for inspection and tissue biopsy of bronchial carcinoma in the superior mediastinum. The diagnostic result with his approach was much higher than in the reported series of scalene node biopsy. Carlens had stated that in over 100 mediastinoscopies there were no complications; since that report, mediastinoscopy has gained widespread use in Europe and North America. The major indications for mediastinoscopy are to obtain a tissue diagnosis without thoracotomy in various intrathoracic lesions,[6] and to assess the operability in bronchial carcinoma.

Mediastinoscopy has proved to be a simple and valuable diagnostic method with minimal morbidity and mortality.[7-14] A review of the literature, however, reveals a number of serious complications associated with mediastinoscopy.[15-20] In 11,328 cases analyzed by Bacsa, *et al.*, the incidence of complications was 1.34 percent. Ashbaugh[17] found that in his review of 9,543 cases, the overall complication rate was 1.5 percent. Some of the complications have resulted in fatal consequences.

Clagett[21] states that mediastinoscopy should be approached in the same way as entry into the state of matrimony, which in the words of the Anglican Book of Common Prayer: "Should not be taken in hand unadvisedly, lightly or wantonly, but reverently, discretely, advisedly, soberly and in the fear of god." Clagett adds, ". . . with fear of life-threatening complications." In preparation for this paper, which reviews the common complications associated with mediastinoscopy, the authors researched the complications mentioned in the literature (Table I).

Dr. Lee was an associate professor of anesthesiology at The Pennsylvania State University College of Medicine, The Milton S. Hershey Medical Center, at the time that he prepared this paper. He is presently associated with the department of anesthesia at St. Elizabeth Hospital, Youngstown, Ohio. Dr. Grossman is a resident in anesthesiology at Hershey Medical Center, Hershey.

Pneumothorax

A pneumothorax interferes with respiratory and cardiovascular function rapidly. Pneumothorax can occur secondary to alveolar rupture, rupture of a subpleural bleb, injury to fascial planes of the neck, and direct injury to the pleura.

Since the mediastinal pleura lies close to the trachea, the pleura can be entered inadvertently during mediastinoscopy. The largest series studied by Bacsa, *et al.*,[15] records that pneumothorax plus hemothorax was the most frequent complication, with a rate of 0.4 percent. In 6,490 patients reviewed by Ashbaugh,[17] the second most common complication was pneumothorax, involving 43 patients (0.7 percent). Furgang, *et al.*,[22] reported a case of bilateral tension pneumothorax which developed during mediastinoscopy, and they discussed the danger of a massive increase in the size of the pneumothorax with use of a high percentage of nitrous oxide as an anesthetic agent. Pearson[6] described three cases of pneumothorax in his own series of 557 mediastinoscopies. In each instance the lung on the right side was mistaken for anthrocotic lymph nodes, and the pleura was biopsied with forceps.

The mediastinal pleura on the right

TABLE I
Complications
Associated with Mediastinoscopy
as Reported in the Literature

I. Intraoperative Complications
- Hemorrhage
- Hemothorax
- Chylothorax
- Pneumothorax
- Recurrent Laryngeal Nerve Injury
- Phrenic Nerve Injury
- Vagus Nerve Injury
- Hemiparesis
- Esophageal Perforation
- Perforation of Bronchus and Trachea
- Compression of Innominate Artery
- Air Embolism
- Cardiac Arrhythmia
- Cardiac Arrest
- Death

II. Postoperative complications
- Mediastinitis
- Mediastinal Abscess
- Wound Infection
- Hydropneumothorax
- Mediastinal Emphysema
- Subcutaneous Emphysema
- Acute Tracheal Collapse
- Postoperative Respiratory Distress
- Mediastinal Hematoma
- Spreading of Tumor Cells
- Death

side is in close relationship to the upper part of the superior vena cava, innominate artery and vein, trachea and esophagus. On the left side, the pleura makes contact with the aortic arch, the left common carotid, and subclavian arteries. This anatomical relationship of the pleura in the mediastinum is responsible for the higher rate of pneumothorax in the right side.

If the pleura is torn, the pneumothorax may increase in size with spontaneous respiration during the mediastinoscopy. A cough which is likely to be caused by compression of the trachea during surgical dissection can produce a higher negative pressure in the intrapleural space, and in this way increase the size of the pneumothorax.

Many authors point out that a large pneumothorax could be prevented if a positive airway pressure were maintained until the end of the procedure. Using this technique, one prevents air from entering the intrapleural space. Others suggest inflation of the lungs forcefully at the near conclusion of the operation. This allows any air in the intrapleural space to escape, thereby preventing a pneumothorax in the event of a pleural tear. In the postoperative period there have been deaths from the result of pneumothorax.[8] A routine chest x-ray is indicated in the immediate postoperative period to detect a possible pneumothorax.

Hemorrhage

The mediastinal tissue is sparsely vascularized. Therefore, mediastinoscopy is usually accomplished with minimal blood loss. However, the literature reports life-threatening hemorrhage associated with this diagnostic procedure.[15,17,23,24] Hemorrhage was the third most common complication in the series studied by Bacsa, *et al.*[15] Hemorrhage occurred with 31 patients, and 17 patients required further surgery to control the bleeding. Ashbaugh[17] found that hemorrhage was the most frequent complication in his review of 36 collected series. Among 48 patients who had bled profusely, 11 required thoracotomy for hemostasis. In 14 series, involving 3,742 patients studied by Foster, *et al.*,[16] excessive bleeding occurred in 22 patients and thoracotomy was necessitated in 4 instances.

The incidence of hemorrhage in the three large series discussed earlier was approximately 0.5 percent. Among these with serious hemorrhage, 30 percent of the patients required thoracotomy for hemostasis. The hemorrhage was not always controllable, and occasionally led to fatal consequences.[23,24]

Major hemorrhage occurs when large vessels are torn or biopsied inadvertently. In fact, every artery and vein in the mediastinum and the heart[25] is vulnerable (Table II). The predisposing factors are: the anatomic variations of vessels; pathology of vessels such as aneurysm of an artery, infiltration of tumor into the vessels, extended surgical intervention beyond its merit; and most of all the inexperience of the mediastinoscopist.

Mast, *et al.*,[25] found from their fresh cadaver study that in 25 percent of the dissections the innominate artery rose slightly above the suprasternal notch. This observation should be kept in mind when making the initial incision. The accidental tear or biopsy of a large vessel can be avoided with careful dissection of lymph nodes and needle aspiration of all structures prior to biopsy. Since hemorrhage is one of the most common complications, and probably the most serious one, an intravenous route should be secured with a large bore catheter, preferably 14 gauge. In addition, at least three units of properly typed and crossmatched whole blood should be available.

Besides major hemorrhage, a sizable mediastinal hematoma[26] requiring remediastinoscopy, and a hemopneumothorax[27] treated with chest tube drainage have been reported. The following is a brief case history. A 56 year old man was mediastinoscopied under general anesthesia. During the surgical intervention the left pulmonary artery was lacerated, which resulted in massive bleeding. The bleeding could not be controlled by tamponade and emergency thoracotomy was required. The patient became hypotensive and rapid administration of two units of whole blood and 500 ml of plasmanate were necessary to resuscitate the patient before the bleeding was controlled surgically. The patient made an uneventful recovery.

Recurrent laryngeal nerve palsy

The left vagus enters the thorax between the left common carotid and subclavian arteries. The nerve crosses the aortic arch and then gives off the left recurrent laryngeal nerve. The left recurrent laryngeal nerve winds under the aortic arch and comes to lie in close proximity to the left side of the trachea. The nerve then passes posteriorly to the tracheo-esophageal groove and ascends into the neck. The right vagus nerve descends into the thorax between the mediastinal pleura and the right side of the trachea. After the vagus crosses the anterior aspect of the subclavian artery, its recurrent laryngeal branch loops under the subclavian artery and returns to the neck.

The recurrent laryngeal nerves are

within the field of mediastinoscopic exploration. Ashbaugh[17] found a frequency of 0.33 percent. Bacsa, *et al.*,[15] reported an incidence of 0.35 percent, which was the second most common complication in their study. As demonstrated in the large series, the incidence of recurrent laryngeal nerve palsy is about 0.3 percent. Most of the vocal cord paralysis reported was left-sided. This is probably due to the fact that the left recurrent laryngeal nerve has a longer path and lies nearer the trachea than the right recurrent laryngeal nerve.[28] Therefore, special care to the left side of the trachea is advised. This particular nerve may be damaged by being sectioned by the biopsy forcep or contused by any mediastinoscopic instruments. Compression by either hematoma or edema in the surrounding tissue may also contribute to the nerve palsy. The vocal cord paralyses reported have been unilateral, bilateral, temporary, or permanent; however, half of the reported cases have been permanent. Unilateral vocal cord paralysis manifests itself in hoarseness; bilateral paralysis may be followed by hoarseness, inspiratory stridor, or severe respiratory distress. This often requires prompt endotracheal intubation or tracheostomy.

Widstrom[29] stresses the importance of preoperative examination of the vocal cords, especially in cases of lung cancer when paralysis of the vocal cord is considered to be a sign of inoperability. This finding could negate the use of mediastinoscopy. He also suggests a routine examination of the vocal cords after the procedure.

Compression of the innominate artery

The innominate artery crosses the midtrachea and lies about 6 cm below the cricoid cartilage. As a mediastinoscope passes behind the suprasternal notch, its anterior surface comes into contact with the posterior aspect of the innominate artery. Therefore, the artery is often compressed between the sternum and the mediastinoscope, resulting in diminishing blood flow not only to the right arm, but of more importance, to the brain through the right common carotid and right vertebral arteries. This is easily relieved by reducing the pressure on the artery.

TABLE II
Sites of Major Bleeding During Mediastinoscopy as Reported in the Literature

I. Arteries	II. Veins
Ascending Aorta	Superior Vena Cava
Aortic Arch	Innominate Vein
Pulmonary Artery and Its Divisions	Azygos Vein
Innominate Artery	Jugular Vein
Bronchial Artery	Venous Plexus

Trikle, *et al.*,[30] describes a case of transient left hemiparesis following mediastinoscopy, which they attribute to compression of the innominate artery. The authors are unable to assess the incidence and significance of this complication because of the lack of published data. However, compression of the innominate artery probably occurs frequently; particular care should be exercised with patients known to have significant arteriosclerotic disease of the carotid arteries. As a matter of technique it is suggested that the anesthesiologist monitor the pulse very closely in the right arm. Following is a brief case history illustrating this complication.

A 45 year old man had a mediastinoscopy for evaluation of his mediastinal mass. During an examination with a mediastinoscope, the anesthesiologist noted a sudden loss of blood pressure and pulse in the right arm. The electrocardiogram was unchanged. The right femoral pulse was strong and regular. Upon withdrawal of the mediastinoscope, as requested by the anesthesiologist, the blood pressure and pulse returned promptly to normal, as the mediastinoscope had compressed the innominate artery.

Perforation of the esophagus

The esophagus lies posterior to the trachea and away from the range of mediastinoscopy throughout its course in the superior mediastinum. In the subcarinal region the esophagus is situated to the left of midline at the tracheal bifurcation, where it may become vulnerable. Damage to the esophagus is likely to occur during dissection of paratracheal, superior, and inferior tracheobronchial lymph nodes, particularly if the trachea is deviated.[16] The risk of esophageal perforation would be increased in the presence of pulsion or traction diverticulum of the esophagus. Perforation of the esophagus may cause an acute inflammatory process of the mediastinum, pleural effusion, and occasionally, pneumomediastinum. Surgical intervention should be undertaken without delay. An ordinary transthoracic closure of the perforation will usually suffice.

Infection in the mediastinum

Recent experience has shown that the mediastinum is fairly resistant to infection. In two large series covering 17,818 cases, there were 16 cases of infection and one death directly related to the mediastinitis. Preciado, *et al.*,[13] have noted that nearly 50 percent of the patients developed a significant temperature elevation on the evening of the operation. They considered this secondary to mild mediastinal inflammation. In all cases the fever subsided spontaneously by the next morning without treatment. The most common cause of acute mediastinitis is perforation of the esophagus.

Cardiac arrhythmia

The cardiac plexus over the distal end of the trachea and its bifurcation is vulnerable to the mediastinoscopy. The effect of manipulation within the cardiac plexus is not clear. But bradycardia and hypotension have occurred during manipulation in the deeper part of the superior mediastinum.[31] Such disturbances are referable to irritation of the vagal cardiac plexus. This is alleviated easily by altering surgical manipulation or by the administration of atropine.

A case of cardiac arrhythmia, reported by Preciado,[12] was due to an

unsuspected myocardial biopsy. It is prudent that the patient's electrocardiogram be monitored closely.

Seeding of metastatic tumors

Dissemination and implantation of malignant cells following biopsy or surgical excision of tumors have long been known. Muller[32] reports a case of implantation metastasis in the skin scar of the neck after mediastinoscopy. This probably originated from metastasis of bronchial carcinoma in a lymph node. Barraclough, *et al.*,[10] present a case in which oat-cell carcinoma from a lymph node biopsy was implanted in a mediastinoscopy wound. The tumor cells were presumably carried by the instrument used in the operation.

TABLE III

Actual Causes of Death as Reported in the Literature

Hemorrhage
Pneumothorax
Mediastinal Infection
Air Embolism
Cardiac Arrest
Acute Circulatory Insufficiency
Severe Respiratory Distress
Postoperative Pneumonia
Myocardial Infarction
Extension of Malignant Tumor

Undoubtedly, certain conditions must exist for the development of disseminated malignant cells. Freise, *et al.*,[33] discuss three favorable factors in development of implantation tumor: (1) the quality of neoplasm; (2) the quantity of disseminated cells; and (3) the resistance of the organism. Implantation tumor has been observed in rare occasions after mediastinoscopy.

Mortality

The operative mortality reported with mediastinoscopy is low. In the series of Ashbaugh,[17] the overall mortality was 0.09 percent. The mortality rate was 1:4,000 in the largest series analyzed by Bacsa, *et al.*[15] Maassen's[34] report on 1,400 mediastinoscopies collected from different hospitals record a mortality of 0.2 percent. Flyn, *et al.*,[35] collected information on 1,087 mediastinoscopies from published reports and show 4 deaths (0.3 percent).

Although all the complications listed in this review could be contributing factors to operative mortality, the actual causative factors of the reported deaths have been limited mostly to the mishaps occurring during surgical intervention and the course of anesthesia management (Table III).

Massive hemorrhage appears to be the most common cause of death. At times, excessive bleeding from torn major vessels in the mediastinum cannot be controlled by tamponade or with thoracotomy: Tucker[23] reports three instances of death from hemorrhage of the large vessels, in spite of emergency thoracotomies. MacVaugh, *et al.*,[24] discussed a death that followed a tear of the right pulmonary artery, despite a prompt thoracotomy. Even if there are more deaths which have not been reported, mediastinoscopy spares many exploratory thoracotomies. The surgeon and anesthesiologist must be aware of, and at all times alert to, the dangers confronting the patients during such an operation.

Summary

Mediastinoscopy is a simple and useful diagnostic procedure for intrathoracic lesions. The overall complication rate is 1.34 percent, and the operative mortality is 1:4000. Pneumothorax is the most frequent complication and hemorrhage is the most common cause of death.

Awareness of the problems occurring in mediastinoscopy is mandatory as it provides for early diagnosis and prompt treatment. Increasing experience and proper surgical technique will further decrease morbidity and mortality associated with mediastinoscopy. □

Cellulitis in children—a five year review

BHUPINDER K. VARMA, M.D.

Harrisburg

Cellulitis is an acute, subacute, or chronic inflammation of loose connective tissue, particularly subcutaneous tissue. It occurs most commonly as a complication of a wound or ulcer, but may develop suddenly in previously normal skin.

Cellulitis is usually caused by either streptococcus, staphylococcus, or haemophilus influenzae.[6] Haemophilus influenzae should be considered as a causative agent of cellulitis, especially between ages 6 months to 2 years.[6] Recent literature has contained isolated reports of cellulitis in children.[1, 2, 3]

Dr. Varma is director of pediatric education at Harrisburg Hospital and clinical assistant professor of pediatrics at the Pennsylvania State University College of Medicine at the Milton S. Hershey Medical Center.

The author has reviewed medical records of Harrisburg Hospital from the years 1971 to 1975 in order to determine recent trends in the etiology of cellulitis.

The study is based on the records of 45 patients, with diagnoses of cellulitis, who were admitted to the pediatric floor of Harrisburg Hospital

1971 to 1975. Inocula for cellulitis were obtained by injecting and withdrawing sterile saline into lesions. Purulent material from local sites, blood cultures, and spinal fluid were cultured where warranted clinically. Blood cultures were performed for both aerobes and anaerobes.

Results of the study are shown in Tables I to V.

Of the 45 cases of cellulitis, staphylococcus aureus was the most common pathogen (33 percent). Staphylococcus aureus was uniformly resistent to penicillin except in one case. Other organisms involved were haemophilus influenzae, pneumococcus, and β haemolyticus streptococcus, both group A and non group A. No pathogens were recovered from 33 percent of the cases and none of these had received prior antibiotics.

Associated positive blood cultures were most frequent in haemophilus influenzae cellulitis (75 percent). This finding is in agreement with previously reported high incidence of positive blood cultures in haemophilus influenzae cellulitis.[2] One of our cases developed meningitis from the same organism. The importance of recognizing the entity is related to bacteremia which often accompanies that type of cellulitis. The bacteremia may lead to metastatic meningitis, osteomyelitis, or pyarthrosis.[5] The bluish-purple color of the swelling, high temperature, age of the patient (under 6 years), site of the swelling (more often on cheek) should alert the physician to the possible role of haemophilus influenzae as the agent responsible for cellulitis.

Staphylococcus aureus was the most common pathogen isolated locally from cervical soft tissue swelling (50 percent). All of the cervical swellings eventually became fluctuant and were drained surgically. In most cases, suppurative lymph nodes were the source of overlying soft tissue swelling. The etiology in one case was group A β hemolyticus streptococcus and no organisms were isolated in 45 percent of cervical swellings.

Considering the organisms involved in cellulitis it may be advisable to use a combination of Nafcillin and Ampicillin as the first line of therapy, especially under 6 years of age, until culture reports are obtained. □

Philadelphia case study

Transmission of human pulmonary tuberculosis

IRWIN L. STOLOFF, M.D.
Philadelphia

A reduction in rate of detected active cases through better drugs, more reliable treatment programs, and effective surveillance have engendered a great degree of confidence in the control of tuberculosis. The lower rates for new cases has permitted a reduction in spending for tuberculosis control programs. Public health departments are becoming bolder in experimenting with cost cutting as long as the active case rate is manageable—theoretically, a dangerous pursuit.

Philadelphia's serious financial problems have curtailed spending in the health field. The following case study demonstrates the continued potential for micro-epidemics of tuberculosis in a city with a declining active case rate, and illustrates the effectiveness of the current surveillance despite program cutbacks.

Case report

While hospitalized, G.C., a black, 75 year old widow living with her daughter, was found to have active pulmonary tuberculosis. Her case was reported to the Philadelphia Health Department (PHD). Her physician treated her with effective drugs (INH, RIF, AMB) and sent her home to continue office treatment and restrict her activity.

While anti-tuberculous treatment was supervised by her physician, the PHD district office near her home monitored her contacts. Her family of two daughters and one son-in-law, their four children and grandchildren were tested. Seven reactors were found and given isoniazid prophylaxis.

Within the month following detection of G.C., 17 others, contacts through G.C.'s church activities, were found to be infected. The activities consisted of participating in church affairs and going to church in a van driven by her minister (Rev. McN.) each Sunday. In the van were 15 members of three families, all of whom were infected. Two infected family members did not go to church.

Subsequent mycobacterial cultures of the van dust were negative and none of the 15 van riders other than G.C. were found to have positive sputum. Of the 24 family and church contacts, only one, her daughter, was living with G.C. The others saw her about one-half day or less per week. Fifteen were children who developed primary tuberculosis. Six became tuberculin converters; five were reactors with no prior tuberculin tests.

The high yield in G.C.'s contacts, her positive sputum, social habits and the timing of tuberculin conversion noted are all consistent with G.C.'s being the source case for the micro-epidemic. So far no tertiary cases have been detected among contacts of the secondary cases. No other church member or family member is known to be an active case with positive sputum.

Was this epidemiologic result unusual? Certainly, in the recent experience of the Philadelphia Health Department it was a high contact rate for a single source case. Yet, in many respects, her case (G.C.) was not unusual for she appears to have been a typical elderly, religious lady, fond of children.

Surveillance was excellent and the Philadelphia Health Department was aided by a school tuberculin testing program which uncovered the first contact (J. McN.), a 17 year old, who rode the van to church with G.C. each Sunday. A large assist was provided by J. McN.'s father, the reverend who drove the van. He recognized the potential for infection and warned his family and congregation, who all eventually came to local health districts for tuberculin testing.

These points are emphasized because of a recent tendency to relax the definition of a contact to include only someone living in the same household or someone with multiple hours of exposure each day. A non-household and other more casual contact is less likely to be tested. This applies to members of the same church or occupants of a car or bus carrying a source case, and so on. It is incumbent upon those responsible for finding contacts of positive sputum cases to skin test all contacts and advise x-ray in tuberculin reactors.

It is possible that stricter isolation of G.C. could have prevented the infection of some of her contacts, but such isolation is not practiced today, except in rare circumstances. G.C. received the best available therapy, (INH, RIF, AMB), so that was not a factor in the epidemic.

Conclusions

The author is disturbed by the fact that a micro-epidemic of tuberculous infection occurred in a city in which active tuberculosis is declining and a tuberculosis control program exists despite budget restrictions. Perhaps the surveillance results are not unusual and 24 infections for a single source case is near the norm for tuber-

Dr. Stoloff is a specialist in the Chronic Respiratory Disease Section of the Philadelphia Health Department. He is an associate professor of medicine and associate professor of community health and preventive medicine at Jefferson Medical College, Thomas Jefferson University, Philadelphia.

Note: The opinions expressed do not necessarily reflect those of the Philadelphia Health Department.

Twenty-four contacts of G.C. (+ sputum culture in April 1976). Final diagnoses were: 6 primary actives (A); 5 tuberculin converters (C); 13 reactors (R); all given chemo-prophylaxis or therapy.

culosis in a large city with a high proportion of susceptibles. If so, what can be expected in view of anticipated cuts in the control programs?

Private physicians in Pennsylvania may be called upon to bear an increasingly larger share of the responsibility for tuberculosis control. To do a proper job requires use of public health surveillance facilities where available, an interest in the epidemiologic evaluation of infectious persons under care, and the desire and tenacity to detect and bring to chemo-prophylaxis or treatment all infected contacts.

Current procedure emphasizes testing of close household contacts who spend about 5-6 hours per day with a positive sputum case; less emphasis is placed on testing other contacts with less intense exposures. The author believes this policy to be outdated. Although the active case rate among casual contacts should be less than among intimate contacts, enough cases in casual contacts exist to justify tighter surveillance, particularly at a time when nurse epidemiologists have a lighter case load. The dividends from a more inclusive contact program are obvious from the study reported above; physicians should not settle for anything less. □

book review

Handbook recommended as valuable reference

EDWARD C. ALBEE, M.D.
Lancaster

Diagnosis and Evaluation of the Drug Abusing Patient for Treatment Staff Physicians, National Drug Abuse Center for Training and Resource Development, Rosslyn, Virginia.

Diagnosis and Evaluation of the Drug Abusing Patient for Treatment Staff Physicians is a concise and comprehensive handbook which acquaints the physician with current treatment alternatives. It gives him a quick reference of the physical and psychological signs and symptoms essential to an accurate diagnosis, and suggests realistic courses of therapy.

Included in the guide are: check lists of questions to ask the patient which supplement the sections on patient interview and physical examination; charts listing 63 signs and symptoms which help distinguish withdrawal, intoxication, and overdose within the five major classes of abused drugs; and an up to date bibliography which aids those involved in the treatment of conditions complicated by drug addictions, such as pregnancy and hepatitis.

Dr. Albee is the director of the drug and alcohol program at Lancaster General Hospital.

Tests to take before and after reading are useful tools for the teaching physician as well as the practicing physician who wants to sharpen his skills.

The booklet may be obtained from the National Drug Abuse Center for Training and Resource Development, 1901 N. Moore St., Rosslyn, VA 22209.

Recent Trends in Diagnosis and Therapeutics of Various Important Diseases in Daily Practice

Morning Session 8 a.m.

"Use and abuse of diuretics" Jacob Zatuchni, Professor and Director of Medicine, Temple University

"Hypertension 1977" Marvin Moser, M.D., Chairman, Joint National Committee on Detection, Evaluation, and Treatment of Hypertension, Clinical Professor of Medicine, New York Medical College, Valhalla

"Empirical Antibiotic Therapy" Herbert L. DuPont, M.D., Professor and Director, Program in Infectious Diseases and Clinical Microbiology, University of Texas Medical School

"Thyroid Diseases" Leslie I. Rose, M.D., Professor of Medicine, Hahnemann Medical College

Afternoon Session 1 p.m.

ANNUAL JEANES MEMORIAL LECTURE: "The Hepatitis Virus in Health and Disease" Baruch S. Blumberg, M.D., Associate Director for Clinical Research, Institute for Cancer Research, Philadelphia, 1976 Nobel Laureate

"Precise Control of Diabetes by Multiple Jet Injection of Insulin and Self-Monitoring of Blood Glucose" T. S. Danowski, M.D., Director, Department of Medicine, University of Pittsburgh School of Medicine

"Which is Better: Physical Examination, History, or Laboratory Test?" Ray Gambino, M.D., Professor of Pathology, Columbia Presbyterian Hospital, New York, N.Y.

Tuition: $30, includes luncheon. Please make checks payable to Jeanes Hospital Medical Staff. Mail to Yung H. Kim, M.D., Jeanes Hospital, 7600 Central Avenue, Philadelphia, PA 19111

Cardilate® (erythrityl tetranitrate)
INDICATIONS: For the prophylaxis and long-term treatment of patients with frequent or recurrent anginal pain and reduced exercise tolerance associated with angina pectoris, rather than for the treatment of the acute attack of angina pectoris, since its onset is somewhat slower than that of nitroglycerin.

PRECAUTIONS: As with other effective nitrites, some fall in blood pressure may occur with large doses

Caution should be observed in administering the drug to patients with a history of recent cerebral hemorrhage, because of the vasodilation which occurs in the area. Although therapy permits more normal activity, the patient should not be allowed to misinterpret freedom from anginal attacks as a signal to drop all restrictions

SIDE EFFECTS: No serious side effects have been reported. In sublingual therapy, a tingling sensation (like that of nitroglycerin) may some times be noted at the point of tablet contact with the mucous membrane. If objectionable, this may be mitigated by placing the tablet in the buccal pouch. As with nitroglycerin or other effective nitrites, temporary vascular headache may occur during the first few days of therapy. This can be controlled by temporary dosage reduction in order to allow adjustment of the cerebral hemodynamics to the initial marked cerebral vasodilation. These headaches usually disappear within one week of continuous therapy but may be minimized by the administration of analgesics

Mild gastrointestinal disturbances occur occasionally with larger doses and may be controlled by reducing the dose temporarily

HOW SUPPLIED: 10 mg chewable scored tablets, bottle of 100. Also 5, 10 and 15 mg oral/sublingual scored tablets in bottles of 100. 10 mg oral/sublingual scored tablets also supplied in bottles of 1,000.

Also available: Cardilate®-P brand Erythrityl Tetranitrate with Phenobarbital* Tablets (Scored)
(*Warning: may be habit-forming.)

North Carolina 27709

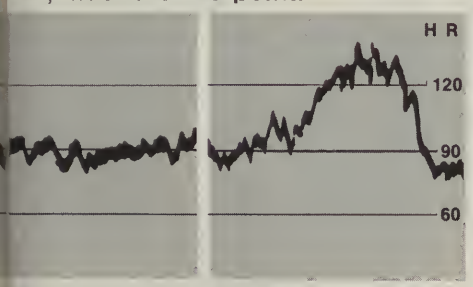
"**Our sex life is nil...**" A problem of the first magnitude to many post infarct patients and their mates...patients are often reluctant to broach the subject; physicians may frequently overlook its implications. This new 16mm film combines candid patient interviews with discussions by Drs. Herman Hellerstein, Thomas Hackett, Albert Kattus, Richard Stein, Carroll Witten and Lenore Zohman. Film and related monograph comprise 2 AAFP credit hours. To arrange viewing, write Burroughs Wellcome Co., Educational Services Department, Research Triangle Park, N.C. 27709 or contact your B.W. Co.® representative.

Sex and the heart patient:

A film every doctor should see.

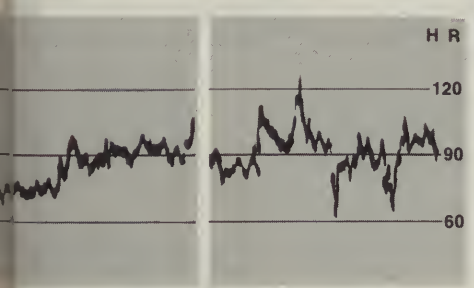
The energy cost of sex to the heart is relatively modest.
Over 80% of post-coronary patients can ultimately resume sexual activity without serious risk. Hellerstein and Freedman demonstrate that mean maximal heart rate during orgasm with spouse (as opposed to extra-marital sex) in 14 post-infarct patients is lower than that during usual occupational activity.

Representations below of actual EKG readings of an attorney, post MI, illustrate the point:



A. Working in office (about 90 beats/min)

B. Confrontation in judge's chamber (about 125 beats/min)



C. Pre-orgasm sex activity (about 90 beats/min)

D. Peaks at orgasm (120 beats/min)

Fear of pain greatest deterrent to post MI sex
In the multitude of MI patients with angina, pain is due to diminished coronary reserve and increased myocardial oxygen demand, precipitated by sex, other excitement and improper exercise. Anginal pain, however, can be relieved, and its recurrence mitigated.

Cardilate® (erythrityl tetranitrate) increases exercise tolerance.
Cardilate relieves anginal pain and prevents its recurrence, thereby allowing increased activity.
Commencing to work in as little as 2 to 5 minutes, Cardilate protects against recurrence of angina for at least 2 hours.

Available in both sublingual and chewable forms, Cardilate is a versatile, convenient agent to help make the angina patient's life more livable.

President Hails 'Great Instrument of Peace,' Insists It Be Used

HISTORIC LANDMARK

Meeting Gives Standing Ovation as Executive Pictures Peace Gain

"If we fail to use it," he declared to the solemn final meeting of the delegates, 'we shall betray all of those who have died in order that we might meet here in freedom and safety to create it.'

"If we seek to use it selfishly—for the advantage of any one nation or any small group of nations—we shall be equally guilty of that betrayal."

Fervent Interpolation

The President, speaking in the auditorium of the War Memorial Opera House, built in memory of sons of the Golden Gate city who gave their lives in the first World War, in which he himself served, seemed to give unconscious expression to the solemn feeling of the occasion when, at the outset of his speech, he interpolated the words, half a hope, half a prayer:

"Oh, what a great day this can be in history!"

Just before the plenary session the President accompanied the

PATIENT PACKAGE INSERTS: A CONCEPT WHOSE TIME HAS COME?

The consumer's right to know is an irreversible and desirable trend of the Seventies. It extends, and properly, to a patient's right to know more about his or her prescription medications. One way, gaining favor, is through patient package inserts. Wisely-prepared and properly distributed when medically indicated, they could markedly improve patient knowledge and drug therapy—laudable goals by anyone's standards.

The PMA endorses these goals and will work with government, the health professions and consumers to achieve them.

The Advantages

The concept holds promise of benefits: better patient understanding of the product prescribed, better adherence to the treatment plan, and more awareness of possible side reactions.

Every doctor has had patients who fail to finish antibiotic regimens because they feel better. Some patients assume that if one tranquilizer or analgesic is good, two may be twice as good. Still others fail to report dizziness while on antihypertensive therapy —and so on.

Problems like these might arise less often if the patient received written information in addition to verbal instructions. Some studies suggest that patients are more receptive to such materials, and they more often understand the verbal instructions and follow them, when inserts are used.

The Disadvantages

There are also some potential problems. Obviously, the inserts must be clearly phrased, without extraneous or complex detail. How much information is enough? How can it be kept current? Should all patients receive the same information? Should inserts be included with all drugs? Should only potential problems be listed or are patients better off with a "fair balance" presentation that describes usefulness as well as drawbacks?

These and similar questions require answers, since model inserts have yet to be properly developed and tested. Despite the need for these studies, the FDA is proceeding prematurely with inserts on selected products. We think the Congress is the only place where the matter can be given the proper legal status and direction, particularly since it represents a conceptual change in the legal, medical and social framework of the nation's prescription drug information system.

The Solution

The PMA believes that carefully-devised pilot studies of various kinds of inserts are needed. They should be developed and implemented with full participation by doctors, pharmacists, consumers, communications experts and the drug industry. Such studies will provide reliable pathways to follow, so that inserts will be useful aids to medical practice.

And particularly we think that you should be closely involved in this debate and in these studies and decisions. Otherwise, people with less experience and qualifications may control the purposes, content and use of a tool with considerable promise for improved patient care. It could make a difference in your practice tomorrow, and more importantly, in the health of your patients.

LIPO-NICIN

A PERIPHERAL VASODILATOR

IMMEDIATE or GRADUAL

nicotinic acid therapy

IMMEDIATE RELEASE

LIPO-NICIN/100 mg.
Each blue tablet contains:
Nicotinic Acid .....100 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 5 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

LIPO-NICIN/250 mg.
Each yellow tablet contains:
Nicotinic Acid .....250 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

GRADUAL RELEASE

LIPO-NICIN/300 mg.
Each time-release capsule contains:
Nicotinic Acid .....300 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (H-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6) . 10 mg.
In a special base of prolonged therapeutic effect.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500.

Indications: For use as a vasodilator in the symptoms of cold feet, leg cramps, dizziness, memory loss or tinnitus when associated with impaired peripheral circulation. Also provides concomitant administration of the listed vitamins. The warm tingling flush which may follow each dose of LIPO-NICIN 100 mg. or 250 mg. is one of the therapeutic effects that often produce psychological benefits to the patient. **Side Effects:** Transient flushing and feeling of warmth seldom require discontinuation of the drug. Transient headache, itching and tingling, skin rash, allergies and gastric disturbance may occur. **Contraindications:** Patients with known idiosyncrasy to nicotinic acid or other components of the drug. Use with caution in pregnant patients and patients with glaucoma, severe diabetes, impaired liver function, peptic ulcers, and arterial bleeding.

TREAT THE SYMPTOMS IN THE GERIATRIC PATIENT

APATHY • IRRITABILITY
FORGETFULNESS • CONFUSION

Cerebro-Nicin® CAPSULES

A GENTLE CEREBRAL STIMULANT & VASODILATOR FOR GERIATRIC PATIENTS

Each CEREBRO-NICIN capsule contains:
Pentylenetetrazole .....100 mg. • Nicotinic Acid .....100 mg.
Ascorbic Acid .....100 mg. • Thiamine HCl .....25 mg.
l-Glutamic Acid .....50 mg. • Niacinamide .....5 mg.
Riboflavin .....2 mg. • Pyridoxine HCl .....3 mg.
AVAILABLE: Bottles 100, 500, 1000
SIDE EFFECTS: Most persons experience a flushing and tingling sensation after taking a higher potency nicotinic acid. As a secondary reaction some will complain of nausea, sweating and abdominal cramps. The reaction is usually transient.
INDICATIONS: As a cerebral stimulant and vasodilator.
RECOMMENDED GERIATRIC DOSAGE: One capsule three times daily adjusted to the individual patient.
WARNING: Overdosage may cause muscle tremor and convulsions.
CONTRAINDICATIONS: Epilepsy or low convulsive threshold.
CAUTION: Federal law prohibits dispensing without prescription. Keep out of reach of children.

Android®-5 Buccal Tabs

Android®-10 Oral Tabs

Android®-25 Oral Tabs

Methyltestosterone U.S.P. – 5, 10, 25 mg.

New Double-Blind Study ANDROID-25 *vs.* Placebo*

* **WRITE FOR REPRINT:** R. B. Greenblatt, M.D.; R. Witherington, M.D.; I. B. Sipahioglu, M.D.: Hormones for Improved Sexuality in the Male and Female Climacteric. *Drug Therapy*, Sept. 1976.

Is there a true aphrodisiac? How effective are androgens in the management of the male climacteric and male impotence? Article discusses the psychophysiological and hormonal changes in the elderly male and female and therapeutic considerations. The effectiveness of methyltestosterone in the management of male impotence was confirmed by a cross-over, double-blind study using a placebo and Android-25 (methyltestosterone 25 mg.), on 20 males, 50 years of age or older who complained of secondary impotence. Patients received a series of placebo then Android-25, or Android-25 then placebo as follows: 1 tablet/30 days; 2 tablets/30 days; 3 tablets/30 days. Sexual response was evaluated: 0 = no change; + = 25% improvement; ++ = 50% improvement; +++ = 75% improvement. Placebo effectiveness was + or ++ in 12.7% of trials. Android-25 elicited a +, ++ or +++ response in 47.2% of trials. There was often a dose related response not observed with the placebo. This effect was not observed in younger patients (age 28-45 years).

DESCRIPTION: Methyltestosterone is 17β-Hydroxy-17-Methylandrost-4-en-3-one. **ACTIONS:** Methyltestosterone is an oil soluble androgenic hormone. **INDICATIONS:** In the male: 1. Eunuchoidism and eunichism. 2. Male climacteric symptoms when these are secondary to androgen deficiency. 3. Impotence due to androgenic deficiency. 4. Post-puberal cryptochidism with evidence of hypogonadism. Cholestatic hepatitis with jaundice and altered liver function tests, such as increased BSP retention, and rises in SGOT levels, have been reported after Methyltestosterone. These changes appear to be related to dosage of the drug. Therefore, in the presence of any changes in liver function tests, drug should be discontinued. **PRECAUTIONS:** Prolonged dosage of androgen may result in sodium and fluid retention. This may present a problem, especially in patients with compromised cardiac reserve or renal disease. In treating males for symptoms of climacteric, avoid stimulation to the point of increasing the nervous, mental, and physical activities beyond the patient's cardiovascular capacity. **CONTRAINDICATIONS:** Contraindicated in persons with known or suspected carcinoma of the prostate and in carcinoma of the male breast. Contraindicated in the presence of severe liver damage. **WARNINGS:** If priapism or other signs of excessive sexual stimulation develop, discontinue therapy. In the male, prolonged administration or excessive dosage may cause inhibition of testicular function, with resultant oligospermia and decrease in ejaculatory volume. Use cautiously in young boys to avoid premature epiphyseal closure or precocious sexual development. Hypersensitivity and gynecomastia may occur rarely. PBI may be decreased in patients taking androgens. Hypercalcemia may occur, particularly during therapy for metastatic breast carcinoma. If this occurs, the drug should be discontinued. **ADVERSE REACTIONS:** Cholestatic jaundice • Oligospermia and decreased ejaculatory volume • Hypercalcemia particularly in patients with metastatic breast carcinoma. This usually indicates progression of bone metastases • Sodium and water retention • Priapism • Virilization in female patients • Hypersensitivity and gynecomastia. **DOSAGE AND ADMINISTRATION:** Dosage must be strictly individualized, as patients vary widely in requirements. Daily requirements are best administered in divided doses. The following is suggested as an average daily dosage guide. **In the male:** Eunuchoidism and eunuchism, 10 to 40 mg.; Male climacteric symptoms and impotence due to androgen deficiency, 10 to 40 mg.; Postpuberal cryptorchism, 30 mg. **REFERENCE: Robert B. Greenblatt, M.D.,** and **D. H. Perez, M.D.:** "The Menopausal Syndrome," *Problems of Libido in the Elderly*, pp. 95-101. Medcom Press, N.Y., 1974. **HOW SUPPLIED:** 5, 10, 25 mg. in bottles of 60, 250. Rx only.

PHYSICIANS WANTED

Anesthesiologist—Board certified or eligible. American medical school graduate. Resort area in northwestern Pennsylvania. Fee for service. Write: Department 762, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Assistant Superintendent for Clinical Services MH—Wernersville State Hospital (Mental) is located 10 miles west of Reading, Pennsylvania. Responsible for the administration and coordination of institutional psychiatric, medical, nursing, social and rehabilitative services. Requirements: four years of clinical experience with mentally ill, including three years in an administrative or supervisory capacity; certification or eligibility for certification by American Board of Pediatrics, Psychiatry, Neurology, or Internal Medicine; and a Pennsylvania license to practice medicine. Salary range $35,000, 37½ hour week, excellent fringe benefits. Contact Personnel Director, Wernersville State Hospital, Wernersville, PA 19565; (215) 678-3411, ext. 276.

Be the Doctor You Want to Be—Today, Navy Medicine gives you the opportunity to be the doctor you want to be. We offer a challenging practice with a minimum of administrative overhead. Plus excellent facilities and support personnel. In addition, a Navy practice gives you time to spend with your family. Associate with other highly motivated physicians. Further your schooling. Even enjoy 30 days' paid vacation every year. No malpractice insurance required. All this, plus a starting salary of $30,000 or more a year, depending on your experience. For more information, contact: Navy Medical Programs, P.O. Box 946, Harrisburg, PA 17108; or call collect to (717) 782-3984.

House Physicians—Pennsylvania license. Competitive salaries. St. Luke's and Children's Medical Center, Philadelphia, Pennsylvania. Contact: J.H. Davidson, M.D.; (215) 684-3900, ext. 685.

Scranton State General Hospital has opening now for anesthesiologist. Must be board certified or eligible and possess Pennsylvania license. Three years experience preferred. Excellent fringe benefits. Send resume and salary requirements to Mr. George R. Strohl, Jr., Administrator, Scranton State General Hospital, Scranton, PA 18501.

Full Time Director, Department of Pediatrics—University affiliated program seeks applicant with academic experience in medical education; excellent salary and benefits; limited private medical practice. Contact David A. Smith, M.D., Medical Director, Polyclinic Medical Center, Harrisburg, PA 17105.

Emergency Physicians—A multi-hospital group of emergency physicians seeks members for full time positions at major hospital emergency departments in Philadelphia and other areas of Pennsylvania. In addition to full time emergency physicians, a physician director is sought for each emergency department. The group encourages professional and administrative autonomy in its member physicians. Financial arrangements are fee-for-service with minimum guarantee. Emergency-oriented educational programs for physicians are maintained by the group at no charge to its members. Compensation ranges from $40,000 to $60,000 per year for 48 hours per week. Write: Department 650, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa. 17043.

Wanted: Physicians—All Specialties—As search consultants in the health care field, we are interested in physicians with a good career path for full time positions as Medical Director, Assistant Medical Director, Chiefs of Clinical Departments, and clinical practice with our clients, blue ribbon hospitals and other organizations in the health care field. We invite your curriculum vitae so that we may contact you when the right situation develops. No financial obligation to candidate. Lepinot Associates, Inc., 702 Abbott Rd., East Lansing, MI 48823.

House Staff Physician—Excellent opportunity for a *Pennsylvania licensed* physician to serve in a responsible position of a modern suburban Philadelphia, 286 bed hospital. JCAH accredited. $35,000 per year plus vacation, sick leave, paid pension plan, hospitalization, malpractice insurance, and disability insurance. Some evening and night duty required. For further information, contact John F. Dunleavy, Assistant Administrator, Holy Redeemer Hospital, Meadowbrook, PA 19046; telephone (215) 947-3000.

Numerous Opportunities available throughout Eastern U.S. for physicians in all specialties. All fees employer paid. Send c.v. with geographic preference and availability date along with objectives. Descriptive brochure available. Medisearch Unlimited, 1509P Four Gateway Center, Pittsburgh, PA 15222; (412) 355-0215 (answers 24 hours).

Orthopedic Surgeon Wanted—Board Certified, for 330 bed acute care general hospital in northeastern Pennsylvania. Replies to Chief of Surgery, P.O. Box 658, Wilkes-Barre, PA 18703.

Pennsylvania and New Jersey Emergency Medicine positions available with fee-for-service group in suburban Philadelphia, central and eastern Pennsylvania, Pittsburgh, and northern and southern New Jersey hospitals. Physician directors also wanted. Send resume to: Northeast Emergency Medical Association, 500 Spruce St., Philadelphia, PA 19106; (215) 925-3511.

Emergency Room Physicians—Pennsylvania license. Competitive salaries. St. Luke's and Children's Medical Center, Philadelphia, Pennsylvania. Contact: J.H. Davidson, M.D.; (215) 684-3900, ext. 685.

CLASSIFIED ADVERTISING INFORMATION

Rates—$12.00 per insertion up to 30 words; 50 cents each additional word; $1.00 per insertion for answers sent in care of Pennsylvania Medical Society. Payable in advance.

COPY DEADLINE—Copy due by the first day of month preceding month of publication. Send to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pennsylvania 17043. The right is reserved to reject or modify copy to conform with publication rules.

DEPARTMENT NUMBERS—Advertisers using department numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers.

WORD COUNT—Count as one word all single words, two initials of a name, each abbreviation, isolated numbers, groups of numbers, hyphenated words. Count name and address as five words, telephone numbers as one, and "Write Department . . ., PENNSYLVANIA MEDICINE" as five.

Family Physicians—Growing community of 4,000+ needs one or two MD's, two family physicians in town and one nearby. Join existing practice or solo available. Excellent recreation and economy. Sixty miles from metropolitan areas. Fifty-seven bed JCAH hospital in community. Trade area of 12,000+. US graduate preferred. Contact L. Wattier, Administrator, Memorial Hospital, Inc., 104 W. 17th St., Schuyler, NE; (402) 352-2441.

Orthopedic Surgeon Wanted—Associates for well established Orthopedic Clinic in Eastern Pennsylvania. First year, salary plus percentage. Partnership after one year. Board eligibility required. No investment needed. Write Department 709, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Psychiatrists and Physicians—Board certified or eligible, Pennsylvania license required. Immediate openings. Excellent opportunity to work in state hospital in developing new programs. Salary competitive. Limited housing available. Excellent fringe benefits. Call (412) 459-8000 or write Ray Bullard, M.D., Superintendent, or Peter Bishop, D.O., Assistant Superintendent, Torrance State Hospital, Torrance, PA 15779. An equal opportunity employer.

Physician for Department of Emergency Services—200 bed general hospital in a beautiful university community located in western Pennsylvania. New construction and renovation program underway. Salary highly competitive. Pennsylvania license required. Contact: William B. Yeagley, M.D., Director of Emergency Services, Indiana Hospital, Indiana, PA 15701; telephone (412) 463-0261.

Psychiatrist, Board Certified or Board Eligible—Mental hospital in metropolitan area. Easy access to New York, Philadelphia, and close to Pocono resort area. Good salary with excellent fringe and retirement benefits. Pennsylvania license required. Contact: Henry Buxbaum, M.D., Superintendent, Clarks Summit State Hospital, Clarks Summit, PA 18411; telephone (717) 586-2011.

House Coverage—Tired of the rat race of private practice—or are you just getting started and could use supplemental income? In either case, contact Sister Salvatore at Nazareth Hospital in northeast Philadelphia—(215) 331-8000—for a very attractive offer on house coverage. Malpractice insurance, vacation, life insurance, health plan are just a few of the benefits that are a part of this offer that includes a salary in the low 30s. Call today.

POSITIONS WANTED

obituaries

• Indicates membership in the Pennsylvania Society at time of death.

• **Anthony F. Antognoli,** Peckville; Georgetown University School of Medicine, 1933; age 70; died July 2, 1977. He had practiced family medicine in Peckville for 40 years.

• **Frederick S. Baldi,** Newtown; University of Pennsylvania School of Medicine, 1910; age 90; died June 7, 1977. He had been superintendent and medical director of Philadelphia County prisons from 1932 to 1953 and headed Rockview State Penitentiary from 1953 to 1956 when he retired. He was a past president of the Philadelphia County Medical Society.

• **Robert C. Bastian, Jr.,** Williamsport; Jefferson Medical College, 1957; age 46; died May 16, 1977. He had served as a physician in the United States Army from 1958 to 1965.

• **Stanley F. Boc,** Kensington; Hahnemann Medical College, 1942; age 63; died July 30, 1977. He was a staff member of Doctor's, Lawndale, and Predecessor Olney hospitals and had been a school physician for the Philadelphia Board of Education.

• **Frederick B. Clemens,** Berwick; Hahnemann Medical College, 1953; age 51; died August 9, 1977. He was on the board of directors of the Central Pennsylvania Health Systems Agency and a member of its Primary Care/Emergency Health Services Committee. He had been chief of staff of Berwick Hospital until June of 1977, when he became chief of obstetrics at the hospital.

• **Miles O. Colwell,** Natrona Heights; University of Pennsylvania School of Medicine, 1943; age 60; died July 24, 1977. He was vice president of health and environmental service for the Aluminum Company of America. He had been an officer of the American Occupational Medical Association and director of the Occupational Health Institute, Inc., and the Community Health Association of Western Pennsylvania.

• **Eugene A. Conti,** Annapolis, Maryland; University of Pittsburgh School of Medicine, 1927; age 73; died July 21, 1977. He had been a member of the obstetrics and gynecology staff of Pittsburgh Hospital from 1930 until his retirement in 1973 and had served as president of the hospital's medical staff. He was a past president of the Allegheny Medical Society and the Pittsburgh Obstetrical and Gynecological Society.

• **Walter S. Darby,** Plymouth Meeting; Hahnemann Medical College, 1943; age 61; died June 26, 1977. He had been a physician for the Colonial School District for 25 years and chief physician for three years.

• **John J. Duncan,** Chadds Ford; Jefferson Medical College, 1937; age 65; died July 25, 1977. He was an associate professor of plastic and reconstructive surgery at Jefferson Medical College and had been a staff member of Fitzgerald Mercy, Nazareth, Philadelphia General, and Doctor's hospitals.

• **Francis W. Feightner,** Greensburg; University of Buffalo School of Medicine, 1939; age 67; died July 17, 1977. He had served as chief radiologist at Latrobe Area Hospital from 1945 to 1973 and at H. C. Frick Community Hospital from 1945 until his death.

• **John A. Hoffa,** Ambler; Hahnemann Medical College, 1936; age 67; died July 4, 1977. He had been coroner of Montgomery County for nine years.

• **Raymond Kabakjian,** Lansdowne; University of Pennsylvania School of Medicine, 1938; age 65; died August 9, 1977. He had practiced family medicine in Lansdowne for 38 years.

• **Phillip B. Kassow,** Philadelphia; Hahnemann Medical College, 1930; age 71; died July 13, 1977.

• **Philip Klarich,** Camden, New Jersey; University of Vienna School of Medicine, 1938; age 65; died July 16, 1977. He taught pelvic anatomy at the University of Pennsylvania Graduate School of Medicine and was an assistant professor of gynecology at Hahnemann Medical College.

• **Clairmont A. Kressley,** Allentown; University of Pennsylvania School of Medicine, 1923; age 86; died July 18, 1977. He had practiced medicine in Sellersville and Allentown for 55 years and was a past president of the Bucks County Medical Society.

• **Raymond F. O'Connor,** Punxsutawney; University of Maryland School of Medicine, 1934; age 69; died June 29, 1977. He had practiced general medicine in Punxsutawney for several years, then received specialty training in ophthalmology at the Cleveland Clinic and returned to Punxsutawney to practice ophthalmology. He was a past president of the Jefferson County Medical Society.

• **Maurice V. E. Ross,** New Brighton; Hahnemann Medical College, 1939; age 72; died July 31, 1977.

• **Edward T. Schantz,** Allentown; Hahnemann Medical College, 1948; age 52; died July 19, 1977. He had practiced general medicine in Allentown for 24 years, and was a past president of the Lehigh County Medical Society and a former delegate to the Pennsylvania Academy of General Practice.

• **Goodell W. Stroup,** Philadelphia; University of Pennsylvania School of Medicine, 1931; age 79; died July 23, 1977. He was a member of the original staff of Fitzgerald Mercy Hospital and, until his retirement in 1970, was also on the staff of Misericordia Hospital.

• **Leander P. Tori,** Philadelphia; Hahnemann Medical College, 1926; age 73; died May 28, 1977.

• **William J. Tourish,** Gladwyne; Jefferson Medical College, 1928; age 74; died July 16, 1977. He had been associated with Jefferson Medical College since 1931 as assistant surgeon and instructor in surgery. Since 1967 he had served as director of the Diagnostic Center at Mercy Catholic Medical Center, Misericordia division.

• **Luis M. Tredici,** Doylestown; National University of Cordoba, Cordoba, Argentina, 1956; age 46; died July 12, 1977. He was a psychiatrist at Thomas Jefferson University Hospital.

Carmen T. Bello, Overbrook; Temple University School of Medicine, 1943; age 61; died July 31, 1977. He was a professor of pharmacology and medicine and head of the section of hypertension of the department of medicine at the Temple University School of Medicine.

William Braun, Haddonfield, New Jersey; Jefferson Medical College; age 69; died May 25, 1977. He had practiced ophthalmology for 35 years.

William Buck, Germantown; Hahnemann Medical College, 1932; age 72; died July 23, 1977. He was on the staff of Germantown Hospital and had practiced general medicine in the Philadelphia area for 45 years.

Emiro Garcia, Kittanning; University of Antioquia, Medellin, Colombia, 1960; age 43; died June 23, 1977. He was a pathologist on the staff of the Armstrong County Memorial Hospital.

Frank W. Hausner, Philadelphia; Temple University School of Medicine, 1926; age 76. Information on the date of death is unavailable at this writing.

John E. Livingood, Reading; Jefferson Medical College, 1913; age 87; died July 11, 1977. Before his retirement from medicine in 1929, he had practiced radiology in Reading for ten years and had served as secretary of the Berks County Medical Society from 1919 to 1929.

Lewis A. Smith, Easton; Jefferson Medical College, 1929; age 81; died August 11, 1977.

Arthur H. Thomas, Philadelphia; Howard University College of Medicine, 1933; age 70; died August 4, 1977.

ROCHE

For recurrent attacks of urinary tract infection in women

Bactrim™ DS Double Strength Tablets

Each tablet contains 160 mg trimethoprim and 800 mg sulfamethoxazole.

Just one tablet b.i.d. for 10 to 14 days

- Action at urinary/vaginal/lower bowel sites helps eliminate reservoirs of infecting organisms
- Distinctive antibacterial action plus wide spectrum helps eradicate recurrent UTI
- Low incidence of bacterial resistance in community practice
- Convenient *b.i.d.* dosage provides day-and-night antibacterial control
- Contraindicated during pregnancy and the nursing period. During therapy, maintain adequate fluid intake perform CBC's and urinalyses with microscopic examination.

Before prescribing, please consult complete product information, a summary of which follows:

Indications and Usage: For the treatment of urinary tract infections due to susceptible strains of the following organisms: *Escherichia coli, Klebsiella-Enterobacter, Proteus mirabilis, Proteus vulgaris, Proteus morganii.* **It is recommended that initial episodes of uncomplicated urinary tract infections be treated with a single effective antibacterial agent rather than the combination.** *Note:* The increasing frequency of resistant organisms limits the usefulness of all antibacterials, especially in these urinary tract infections.

Also for the treatment of documented *Pneumocystis carinii* pneumonitis. To date, this drug has been tested only in patients 9 months to 16 years of age who were immunosuppressed by cancer therapy.

The recommended quantitative disc susceptibility method (*Federal Register, 37*:20527-20529, 1972) may be used to estimate bacterial susceptibility to Bactrim. A laboratory report of "Susceptible to trimethoprim-sulfamethoxazole" indicates an infection likely to respond to Bactrim therapy. If infection is confined to the urine, "Intermediate susceptibility" also indicates a likely response. "Resistant" indicates that response is unlikely.

Contraindications: Hypersensitivity to trimethoprim or sulfonamides; pregnancy; nursing mothers; infants less than two months of age.

Warnings: Deaths from hypersensitivity reactions, agranulocytosis, aplastic anemia and other blood dyscrasias have been associated with sulfonamides. Experience with trimethoprim is much more limited but occasional interference with hematopoiesis has been reported as well as an increased incidence of thrombopenia with purpura in elderly patients on certain diuretics, primarily thiazides. Sore throat, fever, pallor, purpura or jaundice may be early signs of serious blood disorders. Frequent CBC's are recommended; therapy should be discontinued if a significantly reduced count of any formed blood element is noted.

Precautions: Use cautiously in patients with impaired renal or hepatic function, possible folate deficiency, severe allergy or bronchial asthma. In patients with glucose-6-phosphate dehydrogenase deficiency, hemolysis, frequently dose-related, may occur. During therapy, maintain adequate fluid intake and perform frequent urinalyses, with careful microscopic examination, and renal function tests, particularly where there is impaired renal function.

Adverse Reactions: All major reactions to sulfonamides and trimethoprim are included, even if not reported with Bactrim. *Blood dyscrasias:* Agranulocytosis, aplastic anemia, megaloblastic anemia, thrombopenia, leukopenia, hemolytic anemia, purpura, hypoprothrombinemia and methemoglobinemia. *Allergic reactions:* Erythema multiforme, Stevens-Johnson syndrome, generalized skin eruptions, epidermal necrolysis, urticaria, serum sickness, pruritus, exfoliative dermatitis, anaphylactoid reactions, periorbital edema, conjunctival and scleral injection, photosensitization, arthralgia and allergic myocarditis. *Gastrointestinal reactions:* Glossitis, stomatitis, nausea, emesis, abdominal pains, hepatitis, diarrhea and pancreatitis. *CNS reactions:* Headache, peripheral neuritis, mental depression, convulsions, ataxia, hallucinations, tinnitus, vertigo, insomnia, apathy, fatigue, muscle weakness and nervousness. *Miscellaneous reactions:* Drug fever, chills, toxic nephrosis with oliguria and anuria, periarteritis nodosa and L. E. phenomenon. Due to certain chemical similarities to some goitrogens, diuretics (acetazolamide, thiazides) and oral hypoglycemic agents, sulfonamides have caused rare instances of goiter production, diuresis and hypoglycemia in patients; cross-sensitivity with these agents may exist. In rats, long-term therapy with sulfonamides has produced thyroid malignancies.

Dosage: Not recommended for infants less than two months of age.

Urinary Tract Infections: Usual adult dosage—1 DS tablet (double strength), 2 tablets (single strength) or 4 teasp. (20 ml) b.i.d. for 10-14 days.

Recommended dosage for children—8 mg/kg trimethoprim and 40 mg/kg sulfamethoxazole per 24 hours, in two divided doses for 10 days. A guide follows:

Children two months of age or older:

Weight		Dose—every 12 hours	
lbs	kgs	Teaspoonfuls	Tablets
20	9	1 teasp. (5 ml)	½ tablet
40	18	2 teasp. (10 ml)	1 tablet
60	27	3 teasp. (15 ml)	1½ tablets
80	36	4 teasp. (20 ml)	2 tablets or 1 DS tablet

For patients with renal impairment:

Creatinine Clearance (ml/min)	Recommended Dosage Regimen
Above 30	Usual standard regimen
15-30	½ the usual regimen
Below 15	Use not recommended

Pneumocystis carinii pneumonitis: Recommended dosage: 20 mg/kg trimethoprim and 100 mg/kg sulfamethoxazole per 24 hours in equal doses every 6 hours for 14 days. See complete product information for suggested children's dosage table.

Supplied: *Double Strength (DS) tablets,* each containing 160 mg trimethoprim and 800 mg sulfamethoxazole, bottles of 100; Tel-E-Dose® packages of 100. *Tablets,* each containing 80 mg trimethoprim and 400 mg sulfamethoxazole—bottles of 100 and 500; Tel-E-Dose® packages of 100; Prescription Paks of 40, available singly and in trays of 10. *Oral suspension,* containing in each teaspoonful (5 ml) the equivalent of 40 mg trimethoprim and 200 mg sulfamethoxazole, fruit-licorice flavored—bottles of 16 oz (1 pint).

Please see back cover.

Her next attack of cystitis may require

the Bactrim™ 3-system counterattack

ROCHE

Bactrim has shown high clinical effectiveness in recurrent cystitis as a result of its wide spectrum and distinctive antimicrobial action in the urinary, vaginal and lower intestinal tracts.

The probability of recurrent urinary tract infection appears to be enhanced by the establishment of large numbers of *E. coli* or other urinary pathogens on the vaginal introitus. The trimethoprim component of Bactrim diffuses into vaginal fluid in effective concentrations, thus combating migration of pathogens into the urethra.

Studies have shown that Bactrim acts against *Entero bacteriaceae* in the bowel without the emergence of resi tant organisms. Thus, Bactrim reduces the risk of introi colonization by fecal uropathogens. It has *no* signifi- cant effect on other normal, necessary intestinal flora.

Bactrim fights uropathogens in the urinary tract/vaginal tract/lower intestinal tract

Status Report:

ACT 111

PAUL F. ABRAMS

A character all its own.

Valium (diazepam) is a benzodiazepine with a character all its own. Pharmacologically, it has been described as more potent mg-per-mg than other available anxiolytic benzodiazepines. Pharmacokinetically, only Valium provides active *diazepam* as well as the active metabolites 3-hydroxydiazepam, desmethyldiazepam and oxazepam.

But the individual character of Valium is even more apparent clinically than pharmacokinetically. And far more significant. That's because of the patient response obtained with Valium. A response which brings a calmer frame of mind. A response which has a pronounced effect on the somatic symptoms of anxiety, particularly muscular tension. A response which helps the patient feel more like himself again because of the way Valium reduces the overwhelming symptoms of anxiety and psychic tension.

Another important aspect of the clinical character of Valium is safety. Though drowsiness, ataxia and fatigue are possible, these and more serious side effects are rarely a problem. Of course, as with all CNS-acting drugs, patients taking Valium should be cautioned against driving, operating dangerous machinery or the simultaneous ingestion of alcohol.

Unquestionably, many psychotherapeutic agents, including other benzodiazepines, have antianxiety effects. But one fact remains: you get a certain kind of patient response with Valium. It's a response you want. A response you know. A response you trust as part of your overall management of anxiety and psychic tension.

Valium®
(diazepam) IV

2-mg, 5-mg, 10-mg scored tablets

a prudent choice in psychic tension and anxiety

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology; spasticity caused by upper motor neuron disorders; athetosis; stiff-man syndrome; convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

DELEGATES SET SOCIETY'S COURSE A new course was charted for the Pennsylvania Medical Society when the House of Delegates met in Annual Session October 25-27 in Lancaster. Over 90 pieces of business, including 45 resolutions, were studied and debated at reference committee open hearings October 25. These included the Society owned insurance company, Society structure, a dues increase, legislative issues, and relations with Blue Shield. New officers assumed their duties following installation ceremonies October 26.

HOUSE ENDORSES SOCIETY OWNED COMPANY The State Society's House of Delegates unanimously endorsed the establishment of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) at 1977 Annual Session. Delegates gave unanimous approval to the $250 mandatory assessment for active members ($125 for senior active members and $25 for residents). Also winning unanimous support was the selective assessment of policyholders, who will pay from $385 for Class I insureds to $2,625 for Class V insureds. Income from the assessment must be invested in PMSLIC by December 1, 1977 for the settlement agreement between the State Society and Argonaut Insurance Co. to be effective. The agreement, reached September 13, will settle all outstanding litigation and replace Argonaut with PMSLIC in the existing master contract which has provided the only means of coverage for some 4,800 physicians. Assessment notices were mailed the first week in October. Second notices, requesting payment by November 15, are in the mail to all who have not yet paid.

DUES UP $75 State Society members will pay $225 dues in 1978 as a result of unanimous action taken by the House of Delegates. The $75 increase is the first since 1974 and will ward off a projected deficit of as much as $700,000 in 1978. The increase will provide funds to cover a 1977 deficit of $256,000. Delegates voted the increase after full discussion at the open hearing of the causes of legal and actuarial expenses. Earlier, delegates greeted with a standing ovation the "money well spent" address of William J. Kelly, M.D., immediate past president. Details on the dues increase and other business of the House of Delegates will appear in the December issue.

DRS. BLADY, LOVETTE, MARSHALL TO LEAD John V. Blady, M.D., Philadelphia surgeon, was sworn in as the Society's president October 26. John B. Lovette, M.D., Johnstown surgeon, became president elect; and Matthew Marshall, Jr., M.D., Pittsburgh urologist, was elected vice president by acclamation. G. Winfield Yarnall, M.D., Harrisburg internist, was re-elected secretary, and D. Ernest Witt, M.D., of Bloomsburg, and Donald E. Harrop, M.D., of Phoenixville, were re-elected speaker and vice speaker of the House of Delegates. Trustees re-elected were Kenneth L. Cooper, M.D., of Williamsport, Seventh District; and David W. Clare, M.D., Pittsburgh, Tenth District. Gerald L. Andriole, M.D., Hazleton, was elected new trustee of the Twelfth District. Samuel F. Cohen, M.D., of Norristown, was elected to the

Judicial Council. George A. Rowland, M.D., of Columbia, chairman of the Board of Trustees, and William C. Ryan, M.D., of Somerset, vice chairman, were re-elected by acclamation. Full election results will appear in the December issue.

SOCIETY ACTS ON HEALTH PLANNING GUIDELINES The House of Delegates, acting on a Board recommendation, has asked the Commission on Health Planning to review the National Health Planning Guidelines published by the Department of Health, Education, and Welfare September 23, 1977. The commission is working with state specialty societies to prepare a report for the Board prior to the presentation of formal comments by the State Society

HOUSE LIMITS SOCIETY OFFICERS' BLUE SHIELD ACTIVITIES Acting on a recommendation of the Board of Trustees, the House adopted as Society policy that in the future no one in an elected PMS leadership position, i.e., members of the Board or officers, should serve on the Blue Shield Board of Directors. In two further actions the House recommended that the Board discontinue making appointments of members at large of the Blue Shield Corporation and that the Society encourage Blue Shield to seek sources, in addition to county medical societies, of physician nominees for election to the Blue Shield Corporation. The policy adoption followed study of an antitrust report by legal counsel.

SOCIETY STRUCTURE STREAMLINED The House of Delegates abolished three Society committees in what appears will be an ongoing examination and modernization of the organizational structure. The Committees on Discipline, Objectives, Relations with Allied Professions, and Medicine, Religion, and Bioethics were abolished. Activities of the latter will be transferred to a commission of the Council on Education and Science. A constitutional change will permit the Board of Trustees to establish administrative councils and describe their activities, subject to review by the House of Delegates.

FOUNDATION TO EXPLORE ALTERNATIVE SYSTEMS The Pennsylvania Medical Care Foundation has been charged by the House of Delegates with the "primary function" of studying "alternative health care financing and delivery systems to determine the need to design a plan for the development of a physician-operated program, with a report of its findings to be presented at the 1978 meeting of the House of Delegates."

AMA HAS HOUSE SUPPORT The House of Delegates voted support for the AMA's national health insurance legislation (H.R. 1818) but voted against mandatory AMA membership for PMS members (unified membership) at this time. Delegates, however, reaffirmed their support of voluntary AMA membership by adopting a recommendation encouraging it.

YOUNG PHYSICIANS RECOGNIZED A stronger voice for medical students and resident physicians was guaranteed when the House of Delegates established within the Society a Resident Physician Section and a Section on Medical Schools. The sections will elect officers and hold meetings in conjunction with the Annual Session of the House of Delegates.

Council reports on Society's legislative action

Proceedings of the 1976-77 State Legislature have been slowed by a "hectic two months' exclusive battle with the state budget" during which "very little else has received their attention," according to the Council on Governmental Relations in its 1977 supplemental report to the House of Delegates. The General Assembly "is scheduled to reconvene . . . just weeks before the House of Delegates opens its session. We think it is safe to assume that very little can be accomplished in the medical legislative area during that time . . ."

Of the more than 50 bills and resolutions that have been reported to the Board of Trustees by the Council, none has become law during the State Legislature's 161st session. Bills which were in committee and on which the State Society had taken a position at the writing of the supplemental report follow.

Ambulances—S-339. The Society supports the bill, which would require that minimum standards be set for all state ambulance services. It has passed the Senate and is in House committee.

Cancer—H-1120. The bill would require that income from taxation of cigarettes be used for cancer research by the State Health Department. The Society favors the concept of using revenues in this way, but opposes the establishment of a bureaucracy to administer the funds. In committee.

Chiropractors—H-711 and H-1238. H-711 would include chiropractic services under the Workmen's Compensation Program. It has passed the House with an amendment requiring the patient to see a physician first. H-1238, which is in House committee, would place chiropractic services under the Blue Shield plan. Both bills are opposed by the State Society.

Clinical Laboratories—H-233. Physicians' offices would be excluded from the definition of clinical laboratories in the Clinical Laboratory Act. The Society supports the bill, which is now in the Senate Public Health and Welfare Committee.

Death Certificate—S-104 and S-401. S-104 would require that a cremation certificate be completed only after notice is given by a coroner. The bill is in Senate committee and has Society support. Also in Senate committee is S-401, which would allow the nurse in charge in a nursing home to sign a death certificate. The Society opposes the bill.

Ghost Surgery—S-714 and S-716. The bills would require that a patient be informed of all present in the operating room at the time of surgery. The Society does not favor the bill, which is in Senate committee.

Good Samaritan Law—H-978. The Society supports this bill, which would offer protection from liability to physicians who give instructions to others in cardiac care units. In House committee.

"Laetrile"—S-901 and H-1240. The Senate has passed and the House has tabled the bill, which would permit the manufacture and sale of "laetrile" in Pennsylvania. The State Society opposes passage.

Lupus Research—S-816. Society support is given to the need for lupus research, but it opposes the award of a grant to the State Health Department for such research. In committee.

Malpractice—S-921 and S-679. S-921 would provide a limited liability category for semi-retired physicians under Act 111 and is supported in principle by the Society. In committee. S-679, which is now in Senate hearings, is a Society-drafted bill to permit professional corporations to purchase coverage under Act 111.

Medical Assistance—S-292 and H-254. The Society is opposed to S-292, which would require departmental preauthorization for nonemergency procedures. H-254 would require vendors to be reimbursed on a cost-related basis and is supported in principle by the Society. In committee.

Medical Practice—H-307. The Society opposes the requirement for a one-year general practice residency. In committee.

Mental Health—H-394 and H-395. Hearings are expected on corrective amendments to the Mental Health Procedures Act. Proposals are now being studied by the Pennsylvania Psychiatric Society.

Motorcycle Helmets—S-550. S-550 would remove the Vehicle Code requirement that all motorcyclists wear helmets. The bill is opposed by the Society. In committee.

Neonatal Hyperthyroidism—H-922. Newborn—S-958, S-959, and S-960. The State Society is currently studying recommendations requiring that hospitals test for neonatal hyperthyroidism, recognize the right of premature infants to receive medical treatment, and test for genetic diseases. In committee.

Nursing—S-684. The bill would allow the State Board of Nurse Examiners to enforce continuing education requirements.

Council reports on proposed legislation—continued

The Society does not oppose the proposal if it is carried out by the Nurses' Association.

Orthotists, Prosthetists—S-340 and S-341. The Society opposes the bills, which would license orthotists and prosthetists in Pennsylvania. In committee.

Physicians' Assistants—S-586. Regulation of physicians' assistants would be overseen by the State Board of Medical Education and Licensure with the passage of S-586. Society support and Senate approval have been given. In House committee.

Physician's Liability—Paramedics—S-752. Society support is given to the bill, which would protect physicians from liability when giving orders to emergency medical technicians. In committee.

Physicians' Licenses—S-937. The original bill was designed to increase all state fees and would fix physicians' biannual renewals at $75.00. Amendments to eliminate the fee and have it set by the State Board of Medical Education and Licensure, in accordance with the Medical Practice Act, are approved by the State Society.

Physical Therapy—H-410. H-410 amends the Physical Therapy Act to exclude athletic trainers from its scope. The Society opposes the bill. In committee.

Prisons—H-965. Prisons would be required to have physicians or nurses on duty at all times. The State Society supports the bill with amendments to include physicians' assistants. In committee.

Public Eating Places—S-220. The Society opposes S-220, which would require all public eating places to have food removal devices. In committee.

Rubella Testing—H-1474. Society support is given to this requirement for females to have premarital rubella tests. In committee.

Salk Vaccine—H-1294. H-1294 recommends that the Advisory Health Board be required to approve the Salk vaccine as a substitute for the Sabin vaccine. The Society opposes the bill because it believes that the Board should be allowed flexibility in its decisions based on supply and other factors. In committee.

Smoking Prohibited—H-989, H-990, and S-168. The Society opposes legislation prohibiting smoking in hospitals and physicians' offices because it believes that designation of smoking areas should be under the jurisdiction of individual hospitals and physicians.

Speech and Hearing Technicians—S-86 and S-87. The bill, which would create a board to license speech and hearing technicians, is opposed by the Society. In committee.

Vehicle Code—H-1171. The bill would amend the 1976 codification. The State Society is seeking repeal of Section 1518 which requires physicians to report patients' conditions. The bill has passed the House.

HOPE to study hospital cost containment

Project HOPE has established and funded a 23 member Committee on Health Policy to study the possible consequences of a national program to contain hospital costs.

According to William B. Walsh, M.D., founder and president of Project HOPE, "This is a joint effort with the University of Southern California Center for Health Services Research, which will manage the study... The ultimate goal is to provide balanced and expertly researched analyses and reports on which the nation can formulate sensible and workable policies regarding the future of health care and its delivery in the United States."

Among the 23 committee members are representatives of: the National Academy of Sciences; the American Hospital Supply Corporation; the American Hospital Association; the American Medical Association; and the Pharmaceutical Manufacturers Association. About 80 other medical, consumer, and educational organizations have been invited to comment.

Task force issues report

The report of the Governor's Task Force on Cancer Control is now available to physicians through the Pennsylvania Department of Health.

The document represents two years of study and preparation by a group of authorities including consumers and laymen as well as professionals in the field of cancer control. The task force offers a number of recommendations, many requiring legislative action, for a comprehensive program of cancer control in Pennsylvania.

Robert C. Eyerly, M.D., Geisinger Medical Center, Danville, served as chairman of the task force; Alton I. Sutnick, M.D., dean of the Medical College of Pennsylvania, Philadelphia, was vice chairman.

For a copy of the report contact Mr. Robert Ranberg, Director, Division of Chronic Diseases, Pennsylvania Department of Health, PO Box 90, Harrisburg, PA 17120; (717) 787-7073.

PBS ends payment for questionable procedures

In an attempt to contain costs and assure quality health care, Pennsylvania Blue Shield removed 17 surgical and 2 diagnostic procedures from its routine payment mechanism as of October 1, 1977.

Criteria used to determine that procedures should not be reimbursed routinely are:

1. New procedures of unproven value.
2. Established procedures of questionable current usefulness.
3. Procedures which tend to be redundant when performed in combination with other procedures.
4. Diagnostic procedures which are not likely to provide a physician with additional information when performed repeatedly.

Payment for the services will be made only upon submission of documentation which establishes medical necessity in each case. PBS will not delete coverage of the procedures unconditionally because situations may occur in which their performance is justified.

Physicians who contemplate performing a procedure on the new list must request predetermination of eligibility by submitting their reasons in writing to Joseph T. Ichter, M.D., PBS vice president for medical affairs, who will review the request with the appropriate medical advisor.

The change in payment policy will supplement the April 1, 1977 request for prior approval for the following services: 50420—Nephropexy; 58400 and 58410—Primary uterine suspension; 89000—Basal metabolic rate; and 64350 and 64351—Lumbodorsal sympathectomy (when used to treat hypertension).

The accompanying chart lists the surgical and diagnostic procedures that are no longer reimbursed routinely.

Procedures Subject to Revised Payment Policy

Code	*Terminology*
37999	Ligation of internal mammary arteries, unilateral and bilateral
46260	Hemorrhoidectomy, radical Whitehead type
49001	Omentopexy, for establishing circulation
50260	Decapsulation kidney, unilateral
50261	Decapsulation kidney, bilateral
53999	Perirenal insufflation
56660	Circumcision, female
58999	Hysterotomy, nonobstetrical, vaginal
58180	Hysterectomy, supracervical, subtotal hysterectomy with or without surgery on tubes and/or ovaries, one or both
64340	Sympathectomy, hypogastric or presacral neurectomy
20920	Graft, fascia lata, by stripper (when used to treat low back pain)
20922	Graft, fascia lata, by incision and area exposure, complex or sheet (when used to treat low back pain)
37650	Ligation, femoral vein (when used to treat post-phlebitis syndrome)
60600	Excision tumor carotid body, without excision of carotid artery (when used to treat asthma)
60605	Excision tumor carotid body with excision of carotid artery (when used to treat asthma)
64330	Sympathectomy, thoracolumbar, unilateral (when used to treat hypertension)
64331	Sympathectomy, thoracolumbar, bilateral or two stage (when used to treat hypertension)
83420	PBI
83520	Icterus index

AMA rebate received

A rebate totalling $17,981.90 was received this year by the State Society based on AMA membership reported for 1977, an increase of $966.55 over the 1976 sum. Fifty percent of the refund from AMA dues will be shared by the 57 counties that reported AMA membership prior to March 15. A rebate of $2.87 per member will be given to those counties that reported in January; reduced amounts of $0.88 and $0.35 per member will be refunded to those that reported in February or between March 1 and March 15.

ACP, PSIM members hold joint meeting

The eastern Pennsylvania regional meeting of the American College of Physicians was held in association with the Pennsylvania Society of Internal Medicine on November 11-13, 1977 in Philadelphia.

Special features of the meeting included a lecture by Frank Sterling, M.D., F.A.C.P., and presentation of a paper by Nobel prize winner Baruch S. Blumberg, M.D., F.A.C.P., and associates from the Institute for Cancer Research, Fox Chase.

George L. Jackson, M.D., F.A.C.P., ACP governor for eastern Pennsylvania, and George R. Fisher, M.D., PSIM president, presided jointly at the meeting, which was highlighted by presentations of medical papers and panel discussions by ACP and PSIM members.

Honored guests at the meeting were Robert H. Moser, M.D., F.A.C.P., executive vice president of ACP, and Calvin F. Kay, M.D., F.A.C.P., deputy executive vice president.

Legal counsel reports

Allegheny Court opts for preservation of life

FRED SPEAKER, ESQ.
Harrisburg

The courts continue to struggle with issues of life, death, and suicide in medical treatment. In a decision made in 1975 but just published, the Allegheny County Court of Common Pleas considered whether to order that emergency blood transfusions be given to an unwilling adult.

The patient was admitted to a hospital suffering from a bleeding duodenal peptic ulcer. He refused to receive emergency blood transfusions; his wife joined with the hospital in applying to the court for authority to administer the emergency transfusions. Both Dr. Howard Elestin and Dr. Michael Levis testified that the patient would die if the transfusions were not administered. The Court agreed and authorized an immediate transfusion, stating that the Pennsylvania Crimes Code:

. . . makes it a crime to cause another to commit suicide or attempt suicide. The public policy of the Commonwealth thus expresses abhorrence at the act of self-destruction. In the present case, to ignore medical help and advice is in effect to court suicide.

* * * * *

Today in our managed society when there are so many necessary and perhaps unnecessary restrictions on individual liberties it is not tyrannical to contend that a person does not have the right to do away with his own life even on sincere religious beliefs. . . . Freedom of conscience still remains. The courts have a right to intervene and to choose life rather than death. The right to practice religion freely does not include the right to diminish the respect for life which is the basis of all society. In re William J. Dell, II *1 D.&C. 3rd 655, 658, 660 (Allegheny 1975).*

Thus, the Court joins other courts that opt for the preservation of life. They are not, however, universally consistent. Furthermore, this decision could be read as having a negative influence on physicians acting on the so-called "Living Will," since the following of a patient's predetermination not to allow artificial means of preservation of life might place the physician in violation of the Crimes Code prohibition against aiding another to commit suicide.

Mr. Speaker is an attorney with Pepper, Hamilton & Scheetz, legal counsel for the State Society.

State Society Physician Placement Service revitalized

A new, systematic approach has been introduced to the Pennsylvania Medical Society's free physician placement service. The Society now matches physicians to practice opportunities based on information supplied in questionnaires.

Physicians looking for associates and communities seeking physicians are encouraged to contact PMS with information about the available position. An acknowledging letter is sent with the appropriate questionnaire and, when the survey is returned, a likely match is made.

The heart of the new placement program is numbers. While more than 50 physicians are now seeking practice opportunities in Pennsylvania, PMS has not received enough notices of available positions to place the doctors.

To begin the physician placement service process, contact the Council on Education and Science, Pennsylvania Medical Society, 20 Erford Rd., Lemoyne, PA 17043. Among the needed openings are specialists in urology, pediatrics, gastroenterology, radiology, and cardiology.

Physician admits guilt

A Wayne County physician pleaded guilty in federal court August 5 to one count of distributing and dispensing a controlled substance.

Richard A. Porter, M.D., of Paupack, was indicted by a federal grand jury on 21 counts of the same charge last February. He agreed to surrender his medical license and enter a guilty plea to one count in return for having the other charges against him dropped, according to court records. Dr. Porter changed his plea from not guilty to all counts before Judge William J. Nealon, who ordered a presentence investigation.

The grand jury charged he illegally dispensed a variety of controlled drugs between October 4 and December 13, 1976. The guilty plea to one count involves the alleged dispensing of biphetamine on December 13.

"Kid, this stuff is the bananas."

Experts agree: when it comes to good-tasting banana flavor—without the unpleasant taste of paregoric—the makers of Donnagel®-PG really know their stuff!

For diarrhea

Donnagel®-PG Ⓥ

Donnagel with paregoric equivalent

Each 30 cc. contains:	
Kaolin	6.0 g.
Pectin	142.8 mg.
Hyoscyamine sulfate	0.1037 mg.
Atropine sulfate	0.0194 mg.
Hyoscine hydrobromide	0.0065 mg.
Powdered opium, USP (equivalent to paregoric 6 ml.) (warning. may be habit forming)	24.0 mg.
Sodium benzoate (preservative)	60.0 mg.
Alcohol, 5%

INTRODUCING...

NEW ROBITUSSIN®-DAC

for the difficult cough complicated by nasal congestion

*To help clear the lower respiratory tract—the most recommended single expectorant in the U.S.**

Guaifenesin, NF . . . . . 100 mg/5 ml
- Enhances output of less viscid secretions to aid in the removal of inspissated mucus.
- Relieves irritated membranes in respiratory passageways by preventing dryness through increased mucus flow.
- Makes dry, unproductive coughs more productive and less frequent.

For cough suppression...the drug of choice†—

Codeine Phosphate, USP . . . . . 10 mg/5 ml
(Warning: May be habit forming.)
- Reduces severity, frequency and patient awareness of cough.
- Promotes patient comfort.
- Low drug dependence and little risk of side effects in recommended dosage.

For accompanying nasal congestion—

Pseudoephedrine HCl, NF . . . . . 30 mg/5 ml
- An orally effective nasal/sinus decongestant.
- Relieves congestion, reduces edema, promotes drainage.
- 60 mg pseudoephedrine in a 2-teaspoonful adult dose.

Available in pints only. You prescribe the quantity dispensed.

References:
*National Disease & Therapeutic Index, Jan.-Dec., 1976. IMS America Ltd., Ambler, Pa. 1976.
†Amer. Med. Assn., Dept. of Drugs, A.M.A. Drug Evaluations, 2nd Edition, Publishing Sciences Group, Inc., Acton, Mass., 1973, pp. 482-3.

Robitussin®-DAC—Each 5 ml (1 teaspoonful) contains: Guaifenesin, NF 100 mg; Pseudoephedrine Hydrochloride, NF 30 mg; Codeine Phosphate, USP 10 mg (Warning: May be habit forming) in a palatable, aromatic syrup. Alcohol, 1.4 per cent. INDICATIONS: For the temporary relief of cough and nasal congestion as may occur with the common cold or with inhaled irritants. CONTRAINDICATIONS: Hypersensitivity to any of the ingredients; marked hypertension, hyperthyroidism, or in patients who are receiving MAO inhibitors or antihypertensive medication. WARNINGS: Use this product with caution in children under 2 years or in children taking another drug. Prescribe cautiously for patients with persistent or chronic cough such as comes with smoking, asthma, emphysema, or where cough is accompanied by excessive secretions. Caution should be taken in administering this drug to patients with high blood pressure, heart disease or diabetes. In patients with chronic pulmonary disease or shortness of breath, this product should be administered with caution. As with all products containing sympathomimetic amines, use with caution in patients with prostatic hypertrophy or glaucoma. Do not exceed recommended dosage because at higher doses nervousness, dizziness or sleeplessness may occur. May cause or aggravate constipation. NOTE: Guaifenesin has been shown to produce a color interference with certain clinical laboratory determinations of 5-hydroxyindoleacetic acid (5-HIAA) and vanillylmandelic acid (VMA). ADVERSE REACTIONS: Agitation, dizziness, insomnia, palpitations or nausea may occur. In such instances, reduction in frequency and/or quantity of dose is indicated. RECOMMENDED DOSAGE: Adults—1 or 2 teaspoonfuls every four hours, not to exceed 12 teaspoonfuls in a 24-hour period; children 6 to under 12 years: 1 teaspoonful every four hours, not to exceed 6 teaspoonfuls in a 24-hour period; children 2 to under 6 years: 1/2 teaspoonful every four hours, not to exceed 3 teaspoonfuls in a 24-hour period. ALSO AVAILABLE: Robitussin®; Robitussin-CF®—Robitussin with codeine; Robitussin A-C®—Robitussin with phenylpropanolamine and dextromethorphan; Robitussin-DM®—Robitussin-DM in solid form (Robitussin-DM Cough Calmers® lozenges); Robitussin-PE®—Robitussin with pseudoephedrine. A. H. Robins Co., Richmond, Va 23220.

FREE OFFER—For a 1978 calendar featuring a poster-size, full-color reproduction of this photo of Southern Railway Engine No. 1530, write "**Robitussin-DAC**" on your Rx pad and mail to "Train Offer," A. H. Robins Company, 1407 Sherwood Avenue, Richmond, VA 23220.

Physician role crucial in determination of disability

"The Physician's Role in the Social Security Program" was the topic of a summer symposium held at the Philadelphia County Medical Society Building. Harry Shubin, M.D., chairman of the Center City Branch of the Philadelphia CMS, and Milton J. Freiwald, M.D., chief medical adviser to the Philadelphia Regional Office on the SSA disability program, delivered opening remarks.

Herbert Blumenfeld, M.D., acting chief medical officer, Social Security Administration Bureau of Disability Insurance, presented a summary of the disability criteria and medical documentation requirements of the Social Security Administration. He explained that the social security law describes disability as "inability to engage in any substantial gainful activity by reason of a medically determinable physical or mental impairment which can be expected to last, or has lasted, for a period of not less than 12 months." The words "medically determinable" assume special significance. Under the program, the impairment must be expressed in anatomic, physiologic, or psychological abnormalities that are medically demonstrable. Symptoms, alone, are not enough to satisfy the requirements of disability. Significantly, the disability does not have to be permanent.

Role of the treating physician

Dr. Blumenfeld explained that when a patient applies for social security disability benefits, he is asked to list medical sources that can provide support for the claim. Ideally, the evidence will consist of data from the records of the treating physician, clinic, or other medical source. *The treating physician is neither asked, nor expected, to make a determination.*

In each state, the responsibility for making the determination of disability rests with the Disability Determination Service (DDS) of that state, which evaluates social security disability claims for its residents. The DDS requests information from the medical sources given by the claimant. These sources usually have enough clinical facts and laboratory findings on record to enable the DDS to determine the severity of the patient's condition and how it limits ability to work. The professional staff of the DDS includes both physicians and trained disability examiners, who form a balanced team of medical and lay evaluation specialists who can consider all the medical and legal facts on file. They evaluate data that range from medical reports to a complete assessment of vocational considerations as part of their preparation for making the disability determination.

Making the decision

Whenever possible the DDS tries to limit its requests for medical information to data that relate directly to the impairment and the associated conditions which the claimant states are the cause of the disability. A goal of such individually tailored requests is to ease the burden of medical reporting without jeopardizing the claimant's right to have the case decided on the basis of all available information.

The decision on a patient's claim can generally be made if all relevant information about the medical condition is reported. The evaluating physician in the state DDS who has requested the medical evidence does not see the patient. Instead, he depends on medical information supplied by the examining physician to assess the severity of the impairment and its expected duration. The disability decision, therefore, rests largely on the completeness of the medical evidence. A detailed report from the treating source, including objective findings based on physical examination and laboratory procedures, is the key. If specialized testing and laboratory data are indicated, a consultative examination may be commissioned. Whenever possible, DDS will arrange to obtain this consultation from the individual's treating physician at the expense of DDS.

Nonmedical factors

Some physicians have had the experience of referring patients with seemingly similar medical conditions to social security only to discover that one patient is allowed disability insurance benefits and another is turned down. Generally, a person who is not working will be found disabled if he has an impairment, or combination of impairments, which meet or equal the level of severity established under the medical criteria listed in the Regulations. For claimants whose impairments fall short of the level of severity described in the medical criteria, nonmedical factors such as age, education, training, and work experience are considered, together with the functional limitations imposed by the impairment, in deciding whether to allow or deny the claim. Complete criteria, including the medical findings listed by body system, are contained in the publication *Disability Evaluation Under Social Security–A Handbook for Physicians*. It can be obtained without charge by writing to the Bureau of Vocational Rehabilitation, Disability Determination Division, 1313 N. Seventh St., Harrisburg, PA 17120.

For Sale

Part Ownership In One Of The Nation's Fastest Growing Physician Supply Houses

When you join the Pennsylvania Medical Cooperative you're not just another customer . . . you're one of the owners. And that's just the way we treat you.

As an owner you'll be able to:

* Purchase *all* of your medical supplies at consistently lower prices. We buy direct and sell to you without the middleman's profits.
* Receive your supplies promptly. We process and ship your order within 24 hours.
* Choose from monthly specials at even lower prices. When we get a good deal we pass it right on to you.
* Put some extra money in your pocket. We're not out to make a profit, we're in business only to save you money. The money you save on supplies (the amount will surprise you) is more profit for your practice.

Memberships in the Co-op are now available for a one-time fee of only $200. Chances are you'll save that much in the first year. Take a moment now to fill out the membership application below. Join the more than 2,000 physicians who now enjoy Co-op savings.

Pennsylvania MEDICAL Cooperative

THE PENNSYLVANIA MEDICAL COOPERATIVE IT'S TIME YOU MADE IT YOUR BUSINESS

MEMBERSHIP APPLICATION

Pennsylvania Medical Cooperative
3617 Simpson Ferry Road
Camp Hill, PA 17011

☐ I have heard enough. I am a member of the Pennsylvania Medical Society, so please enroll me as a member of the Pennsylvania Medical Cooperative. Enclosed you will find a check in the amount of $200 to cover the membership requirement. It is my understanding that this is a life-time subscription entitling me to a vote in the affairs of the Cooperative and giving me the right to purchase all medical supplies offered by the Cooperative.

☐ I am impressed by what I have read, but I would like to know more. Please send me more information and a membership application on the Co-op.

(Please make checks payable to the Pennsylvania Medical Cooperative.)

Cardilate® (erythrityl tetranitrate)
INDICATIONS. For the prophylaxis and long-term treatment of patients with frequent or recurrent anginal pain and reduced exercise tolerance associated with angina pectoris, rather than for the treatment of the acute attack of angina pectoris, since its onset is somewhat slower than that of nitroglycerin.

PRECAUTIONS: As with other effective nitrites, some fall in blood pressure may occur with large doses.

Caution should be observed in administering the drug to patients with a history of recent cerebral hemorrhage, because of the vasodilation which occurs in the area. Although therapy permits more normal activity, the patient should not be allowed to misinterpret freedom from anginal attacks as a signal to drop all restrictions.

SIDE EFFECTS: No serious side effects have been reported. In sublingual therapy, a tingling sensation (like that of nitroglycerin) may sometimes be noted at the point of tablet contact with the mucous membrane. If objectionable, this may be mitigated by placing the tablet in the buccal pouch. As with nitroglycerin or other effective nitrites, temporary vascular headache may occur during the first few days of therapy. This can be controlled by temporary dosage reduction in order to allow adjustment of the cerebral hemodynamics to the initial marked cerebral vasodilation. These headaches usually disappear within one week of continuous therapy but may be minimized by the administration of analgesics.

Mild gastrointestinal disturbances occur occasionally with larger doses and may be controlled by reducing the dose temporarily.

HOW SUPPLIED. 10 mg chewable scored tablets, bottle of 100. Also 5, 10 and 15 mg oral/sublingual scored tablets in bottles of 100. 10 mg oral/sublingual scored tablets also supplied in bottles of 1,000.

Also available: Cardilate® P brand Erythrityl Tetranitrate with Phenobarbital* Tablets (Scored)
(*Warning: may be habit-forming.)

Wellcome North Carolina 27709

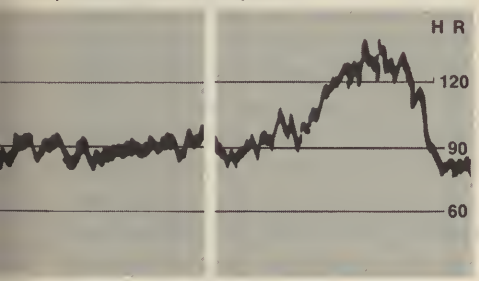
"**Our sex life is nil...**" A problem of the first magnitude to many post infarct patients and their mates...patients are often reluctant to broach the subject; physicians may frequently overlook its implications. This new 16mm film combines candid patient interviews with discussions by Drs. Herman Hellerstein, Thomas Hackett, Albert Kattus, Richard Stein, Carroll Witten and Lenore Zohman. Film and related monograph comprise 2 AAFP credit hours. To arrange viewing, write Burroughs Wellcome Co., Educational Services Department, Research Triangle Park, N.C. 27709 or contact your B.W. Co.® representative.

Sex and the heart patient:

A film every doctor should see.

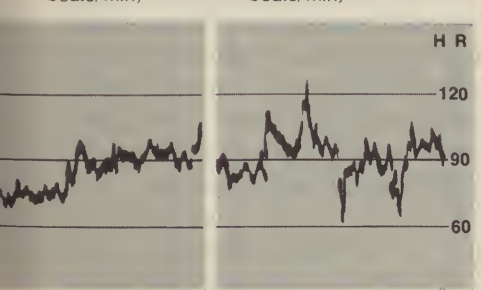
The energy cost of sex to the heart is relatively modest.
Over 80% of post-coronary patients can ultimately resume sexual activity without serious risk. Hellerstein and Freedman demonstrate that mean maximal heart rate during orgasm with spouse (as opposed to extra-marital sex) in 14 post-infarct patients is lower than that during usual occupational activity.

Representations below of actual EKG readings of an attorney, post MI, illustrate the point:



A. Working in office (about 90 beats/min)

B. Confrontation in judge's chamber (about 125 beats/min)



C. Pre-orgasm sex activity (about 90 beats/min)

D. Peaks at orgasm (120 beats/min)

Fear of pain greatest deterrent to post MI sex
In the multitude of MI patients with angina, pain is due to diminished coronary reserve and increased myocardial oxygen demand, precipitated by sex, other excitement and improper exercise. Anginal pain, however, can be relieved, and its recurrence mitigated.

Cardilate® (erythrityl tetranitrate) increases exercise tolerance.
Cardilate relieves anginal pain and prevents its recurrence, thereby allowing increased activity.
Commencing to work in as little as 2 to 5 minutes, Cardilate protects against recurrence of angina for at least 2 hours.

Available in both sublingual and chewable forms, Cardilate is a versatile, convenient agent to help make the angina patient's life more livable.

Cardilate®
(erythrityl tetranitrate)

From the arbitration administrator

Status report — Act 111 of 1975

PAUL F. ABRAMS, ESQ.
Harrisburg

This article will provide the latest information available on the operations of Pennsylvania's medical malpractice arbitration system which has been in effect since January 13, 1976. Although it is too soon to gauge definitively the effectiveness of the new system, I believe our accomplishments to date indicate successful operation of an innovative system to resolve medical malpractice claims brought against health care providers.

In order for us to operate, one of our initial tasks was the collection of the annual fee required from all health care providers practicing in Pennsylvania. For the 1976 period (February 1, 1976 to January 31, 1977) approximately 24,300 health care providers paid the required charge. That number included 20,600 medical doctors, 2,000 osteopathic physicians and surgeons, 900 podiatrists, 600 nursing homes, and 270 hospitals. Approximately 12,500 licensed health care providers informed us that they were not practicing in Pennsylvania.

For the current year (February 1, 1977 to January 31, 1978) we have collected the required fee from approximately 23,100 health care providers. This includes 19,500 medical doctors, 1,950 osteopathic physicians and surgeons, 800 podiatrists, 590 nursing homes, and 270 hospitals. A series of follow-up steps have been taken to collect the fee from providers who have not yet responded to our initial billing and reminder letter, and we expect the total number of health care providers paying our fee for 1977 will equal or exceed last year's figures.

Our receipts for the 1976 billing period have totalled approximately $1,350,000; and to date for the 1977 period, approximately $1,295,000.

Administration

Those of you who know me personally would probably agree that I am not known as the last of the big time spenders. I like to think of myself as being careful with money. Let me say that if I am careful with my own funds, I am even more frugal with money that has been entrusted to me by members of the public—in this instance, practicing health care providers in Pennsylvania. I administer a no frills operation in Harrisburg, and part with your money very grudgingly.

Much of our administrative work involves peak periods of activity lasting between four and eight weeks. Rather than hire full time employees who would work hard during that period and be relatively idle at other times, we have hired only that number of full time employees necessary to ing basis. We have then employed part time employees through a public bidding process, at $2.99 per hour, to assist during the peak period.

The author was a principal draftsman of Act 111 and is the first administrator of Pennsylvania's arbitration system.

As a result of the bare-bones approach we have taken in operating an alternative to the court system, and because of our success in settling a significant percentage of cases, we are reviewing our expected future revenue needs. We are hopeful that soon we will be able to recommend to the Governor and the General Assembly a substantial reduction in the annual fee physicians pay to fund the arbitration system.

Another of our initial tasks was to generate the names of arbitration panel candidates who would be available to serve on arbitration panels. Our office mailed out approximately 16,000 letters and questionnaires to potential panel members throughout the Commonwealth. Approximately 7,200 questionnaires were properly filled out and returned to our office. Of that total, our files now include approximately 1,500 attorney candidates, 1,600 health care provider candidates, and 4,100 lay persons. I am particularly grateful for the efforts of the Pennsylvania Medical Society and the county medical societies for their efforts in providing me with initial lists of physicians whom we contacted with regard to future service as arbitration panel members.

Status of cases

The new arbitration system has

original, exclusive jurisdiction to hear and decide cases in which the medical procedure giving rise to the claim occurred on or after January 13, 1976, the effective date of Act 111. From that date until December 31, 1976, 48 cases were filed with our office.

From January 1, 1977 to September 28, 1977 an additional 262 cases have been filed. Thus, 310 cases have been filed during our first 20 months of operations. This is a substantially lower number than I would have expected by this time. The reasons, I believe, are the typical time lag between the medical incident and the filing of suit (in Pennsylvania, an average of 17 months), and the fact that few attorneys care to be trailblazers under a new, unfamiliar procedure.

During the past six months new cases have been averaging almost ten per week and, unfortunately, I suspect that such a rate of filing will hold steady or increase slightly in the future.

Of the total 310 cases filed to date, 139, or 45 percent, represent actions in which the alleged negligence resulted in death. Of the 691 named defendants in the 310 cases, 403 are physicians, 208 are hospitals, 10 are nurses, 8 are nursing homes, and 62 fall into the miscellaneous category. The average number of defendants per case is slightly more than two. Forty percent of the cases have a single defendant, and 82 percent have three or fewer defendants. Our experience indicates that plaintiffs' attorneys are not naming entire letterheads of physicians as has been alleged in the past. It should be noted, too, that defendants frequently name other physicians as additional defendants in medical malpractice cases. Such additional defendants are included in our statistics on the total number of defendants.

PAUL ABRAMS has presented the facts in this article to several county medical society meetings recently. He is shown above, center, at a medical legal symposium sponsored by the Delaware County Medical Society and Bar Association September 29. With him are, left to right, Conrad A. Etzel, M.D., chairman of the medical society's interprofessional relations committee; James C. Buckley, Esq., bar association president elect; John S. J. Brooks, Esq.; A. Gerald Litvin, Esq.; Hunter S. Neal, M.D., medical society president; and John Churchman Smith, Esq., chairman of the bar association's interprofessional committee.

Conciliation efforts

The Rules of Practice and Procedure which we adopted provide for a mandatory conciliation conference to be held within six months of the filing of the complaint. At such a conference, attended by me and counsel to the parties, we attempt to effectuate, if possible, a settlement or discontinuance of the suit.

To date, 40 have been held and 29 additional conferences are scheduled to be held during the month of October. In six cases, counsel have requested a second conciliation conference and such conferences are scheduled to be held within the next three months. Settlements were concluded in 9 actions and are pending in 15 actions for which we held conciliation conferences. A settlement or discontinuance has occurred in 20 cases prior to our mandatory conference, and 5 cases have been dismissed.

It appears at this time that at least 60 percent of the cases will be settled or discontinued (without payment to a plaintiff) as a result of our mandatory conciliation conference. I strongly suspect that the final figure will be closer to 80 or 90 percent by the time the panel selection procedure is completed. Such a high rate of settlements with the approval of the defendant(s) will substantially reduce the costs of resolving medical malpractice cases. If such proves to be the case, we will be able to reduce the annual fee collected to fund the arbitration system.

Of the 310 cases filed, 46 percent arose in Philadelphia County. Adding the cases that have arisen in the suburban counties sur-

rounding Philadelphia, the five county southeastern Pennsylvania area has been the site of 66 percent of the cases.

Arbitration hearings

As of October 1, 1977 no arbitration panel hearings have been held. In two cases, however, we have completed the procedure for selecting arbitration panel members. In the first, the hearing was scheduled for the third week of July and on the day prior to the scheduled hearing, the defendant physician's counsel informed us that the defendant was vacationing abroad for the summer. This came as a surprise to his counsel who had previously informed him that the hearing would be held during the month of July and had been told that the date was agreeable.

In the second action we have had a series of difficulties with the attorney members of the panel, who at the last minute informed us that they could not serve because of potential conflicts of interest. We have had to select, on two different occasions, other attorneys to substitute for panel members previously selected. The first case mentioned is scheduled to be heard October 5, 1977, and the second will be heard by a panel by the early part of November.

Constitutionality questions

Common Pleas Court Judge Jacob Kalish in Philadelphia recently issued an Opinion concerning three constitutional challenges lodged against a number of aspects of the arbitration system. Judge Kalish's Opinion upheld the constitutionality of the arbitration system in all respects, except for the provision of Act 111 permitting the decision and findings of fact of an arbitration panel to be admitted into evidence before the court in any appeal taken from a panel's decision. The Opinion said that such a provision would unconstitutionally infringe on a party's right to a *de novo* trial by jury. Plaintiffs in those actions have appealed the portions of Judge Kalish's Opinion upholding the constitutionality of the bulk of the arbitration system and its procedures, and the Commonwealth of Pennsylvania has appealed that portion of the Opinion striking down the admissibility on appeal of the panel's decision and findings of fact.

A second constitutional issue has been raised with regard to the mandatory insurance features of Act 111. A physician in Bradford County who has never carried professional liability insurance informed the State Board of Medical Education and Licensure that he did not intend to carry such insurance. On December 9, 1976 the Board held a hearing with regard to his situation and the provisions of Act 111 requiring him to maintain professional liability insurance. The board voted to suspend his license for not maintaining the mandated level of insurance, and the official adjudication was issued in 1977. Thereafter, the physician appealed the decision of the Board to the Commonwealth Court and briefs have been filed by all parties. Actual suspension will not take place until the appeal is determined finally by the courts.

CAT Fund

Let me also provide some information about the Medical Liability Catastrophe Loss Fund, which pays judgments or settlements in excess of the basic $100,000/$300,000 insurance limits required by Act 111. As of September 27, 1977 the fund had received premium surcharges amounting to approximately $14,557,000. Of that amount, approximately $9,437,000 was received for 1976 coverage, and approximately $5,120,000 has been received for 1977. CAT Fund officials have been informed by primary coverage insurance carriers of approximately 110 incidents in which the *potential* liability may exceed the $100,000 basic insurance coverage limits, although it is expected that far fewer than that number will actually result in the Fund's financial involvement. To date, the CAT Fund has not paid any money in plaintiff recoveries, although it has agreed to settle one action in which the CAT Fund's share of the settlement is $225,000. That amount will be paid early in January 1978 as per the terms of Act 111.

'. . . the arbitration system is working fairly, efficiently, and economically. But . . . it does not confront the crucial issue of reducing . . . medical negligence.'

I believe that the arbitration system established by Act 111 is working fairly, efficiently, and economically. But such a system addresses only the problem of adjudicating or otherwise resolving medical malpractice claims. It does not confront the basic and crucial issue of reducing the incidence of medical negligence. I commend the medical profession for its efforts to date, but I urge you and your colleagues who administer hospitals and emergency rooms to take bold steps to treat the cause and not merely the effects of burgeoning malpractice litigation.

I pledge my best efforts to administer the medical malpractice arbitration system competently, and offer my assistance to your efforts to root out the causes of the problems facing health care providers and consumers.

B.W.CO.® HAS PUT MORE POTENCY IN THE LINE

EMPRACET® with Codeine Phosphate, 60 mg, No. 4 Ⓒ III

EMPRACET® with Codeine Phosphate, 30 mg, No. 3 Ⓒ III

CONTRAINDICATIONS: Hypersensitivity to acetaminophen or codeine.

WARNINGS: Drug dependence. Codeine can produce drug dependence of the morphine type and may be abused. Dependence and tolerance may develop upon repeated administration; prescribe and administer with same caution appropriate to oral narcotics. Subject to the Federal Controlled Substances Act.

Usage in ambulatory patients. Caution patients that these products may impair mental and/or physical abilities required for performance of potentially hazardous tasks such as driving a car or operating machinery.

Interaction with other CNS depressants. Patients receiving other narcotic analgesics, general anesthetics, phenothiazines, tranquilizers, sedative-hypnotics, or other CNS depressants (including alcohol) may exhibit additive CNS depression; when used together reduce dose of one or both.

Usage in Pregnancy. Safe use is not established. Should not be used in pregnant patients unless potential benefits outweigh possible hazards.

PRECAUTIONS: Head injury and increased intracranial pressure. Respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a pre-existing increase in intracranial pressure. Narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.

Acute abdominal condition. These products or other narcotics may obscure the diagnosis or clinical course of acute abdominal conditions.

Special risk patients. Administer with caution to certain patients such as elderly or debilitated patients and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, or prostatic hypertrophy or urethral stricture.

ADVERSE REACTIONS: Most frequently include lightheadedness, dizziness, sedation, nausea, and vomiting; more prominent in ambulatory than in nonambulatory patients; some may be alleviated if patient lies down; others include: euphoria, dysphoria, constipation and pruritus.

DRUG INTERACTIONS: CNS depressant effect may be additive with that of other CNS depressants. See Warnings.

For symptoms and treatment of overdosage and full prescribing information, see package insert.

Introducing EMPRACET® c̄ CODEINE #4

Each tablet contains: codeine phosphate, 60 mg (1 gr) (Warning—may be habit-forming); and acetaminophen, 300 mg. Ⓒ III

Our new non-aspirin/ codeine analgesic for moderate to severe pain.

New peach-colored Empracet c̄ Codeine #4 offers a potent alternative for patients in whom aspirin is not indicated.

Unlike compounds containing oxycodone which afford comparable analgesia, new Empracet c̄ Codeine #4 gives you CIII prescribing convenience—up to 5 refills in 6 months at your discretion (where state law permits). And, prescribing by telephone is permissible in most states. Moreover, new Empracet c̄ Codeine #4 has less addiction potential than does oxycodone.

For those of your patients requiring a less potent analgesic, non-aspirin Empracet® c̄ Codeine #3 provides effective relief of moderate pain.

Burroughs Wellcome Co. makes codeine combination products. You make the choice.

Psychiatric hospitalization of the prominent individual...

often presents unusual treatment challenges. Clinical experience suggests that prominent patients and members of their families are best treated in a highly individualized and comfortable therapeutic environment.

Springwood at Leesburg, a 30-bed private psychiatric hospital, has been designed to treat this special patient population (including physicians, corporate executives, and high-level government officials). The new hospital, situated on an historic 45 acre estate in Loudoun County, Virginia, is located 35 miles west of Washington, D.C.

Referring physicians are invited to participate in planning the patient's hospital care program, and always play an important role in discharge planning.

Army Medicine wants more doctors who specialize.

If you're a physician specializing in pediatrics, anesthesiology, radiology, or internal medicine, we've got a full range of career opportunities for you.

These opportunities are available in a setting that's about as free from non-medical distractions as it's possible for a practice to be. If you're a doctor who's more interested in practicing medicine than the running of a practice, Army Medicine could be perfect for you. Just call your local Army Medical Counselor, and he will discuss specific assignment opportunities with you.

Captain James Whitmire 609-562-2663
or
Major Robert Sellards 412-644-3484

Army Medicine. The practice that's practically all medicine.

in my opinion

A vanishing art—the physical examination

DAVID PRAGER, M.D.
Allentown

CBC, SMA-12, coagulation profile, RPR, chest x-ray, urinalysis, CVP, ECG are all familiar expressions to medical students and physicians. Other familiar statements frequently overheard during a case (not a patient) presentation are: What did the chest x-ray show? Did you get a flat plate of the belly? How was the ECG? Are the arterial blood gases OK?

At CPC presentations, the volume of laboratory work presented and discussed usually has greater emphasis than the findings of the physical examination.

In medical journals the space usually allotted to laboratory results is two to three times greater than that allotted to the findings of the physical examination. Serial laboratory and x-ray findings are presented, but rarely are serial physical findings included in the CPC format. Refer to the yearly issues of the *Index Medicus*; under the heading "Physical Examination" it rarely lists thirty subtitles, yet under the category of "Lecithins" it contains an average of more than seventy published references.

Ask a medical student, intern, resident, fellow, or graduate physician to define RNA or DNA and the chances are that he will promptly respond with the correct answer. Let the questioner ask the same physician: What does the umbo look like? He will probably respond with the usual stall: Will you please repeat the question?

If the questioner were to repeat the question and explain that the umbo is an anatomical part of the tympanic membrane, the group's disdain for the questioner probably would be substituted with curiosity. Curiosity because it is odd that many undergraduate and graduate physicians know what DNA or RNA stands for, but don't know what the umbo represents.

This author guesses that the same group would be equally unfamiliar with other expressions, such as whispering pectoriloquy, tactile fremitus, amphoric breath sounds, and a whole host of terms relating to the vanishing art of the physical examination. This observer has worked with and taught many medical students and house officers over the past ten years and rarely has met a newly graduated physician—or a postgraduate physician, for that matter—who could perform a capable physical examination.

The only medical specialty that seems to depend heavily on the physical examination is dermatology. All other med-

Dr. Prager, in the private practice of hematology/medical oncology, is chief of the division of hematology/medical oncology at Allentown Hospital and Allentown and Sacred Heart Hospital Center. He is also a clinical professor of medicine at the Hahnemann Medical College.

Each Berocca Tablet contains:

Thiamine mononitrate (Vitamin B_1)	15 mg
Riboflavin (Vitamin B_2)	15 mg
Pyridoxine HCl (Vitamin B_6)	5 mg
Niacinamide	100 mg
Calcium pantothenate	20 mg
Cyanocobalamin (Vitamin B_{12})	5 mcg
Folic acid	0.5 mg
Ascorbic acid (Vitamin C)	500 mg

Indications: Nutritional supplementation in conditions in which water-soluble vitamins are required prophylactically or therapeutically.

Warning: Not intended for treatment of pernicious anemia or other primary or secondary anemias. Neurologic involvement may develop or progress, despite temporary remission of anemia, in patients with pernicious anemia who receive more than 0.1 mg of folic acid per day and who are inadequately treated with vitamin B_{12}.

Dosage: 1 or 2 tablets daily, as indicated by clinical need.

Available: In bottles of 100 and 500.

ical specialties are laboratory oriented and dependent. For example, the chest physician seems to spend more time with the chest x-ray or arterial blood studies than with the patient's chest. The gastroenterologist is more attuned to endoscopy and x-ray studies than to abdominal inspection, palpation, percussion, or auscultation. The hematologist looks only for lumps and bumps while the oncologist seeks out the extent of disease via scans, x-rays, angiograms, and ultrasound studies. The cardiologist auscultates, but checks everything out with the phonocardiogram, cardiac catheterization, and ECG. The endocrinologist used to examine the patient until hormonal radioimmunoassays became readily available. The nephrologist orders a creatinine clearance, 24 hour urine for total protein, IVP and renal biopsy, but rarely personally checks the microscopic analysis of the patient's urine.

The internist may be perplexed about the patient's condition because the patient looks and is so sick, but the laboratory tests are normal and "not that bad." Another way of describing this quandary is: The patient cannot be that sick because the SMA-12 is normal; or, If the laboratory tests didn't give us an answer, maybe we should perform a physical examination.

Perhaps this author rambles too much and fails to make his point, which is that *many contemporary physicians do not know how to perform a comprehensive, capable, and reproducible physical examination.* Such a statement may seem ridiculous, but to learn how to perform a physical examination requires a teacher who can teach that which he has learned.

The typical physical diagnosis course in medical school is taught by a physician who has little ability in the area; his teacher probably taught physical diagnosis in the same manner in which he is now teaching the course. Furthermore, the physician with the least seniority is usually assigned to the task of teaching physical diagnosis to the medical students. This decreased seniority is frequently combined with limited clinical experience and skill in performing the assigned task.

Physical diagnosis, or the bedside examination of the patient, can be taught only to a small group of students and only by a seasoned clinician who appreciates DNA, but who can also recognize whispering pectoriloquy and an abnormal umbo. Because that clinician can recognize and evaluate those physical findings, he can teach the meaning of the signs to the students. The bedside diagnostic examination can only be taught at the bedside, not through televised conferences, textbooks, journals, or audio-visual corrals. The art of the physical examination should be taught as a communication among patient, clinician, and student. Unless we assure a trained supply of clinicians, the physical examination will become a vanishing art that will be greatly missed and reclaimed in the future only through great effort.

The art of performing a capable physical examination can be taught to the student by sending him to a qualified physician who has learned the art. Because physical examination is an art not a science, it must be passed down as an art from teacher to student. Somewhere in the great, present day proliferation of medical knowledge, the physical examination has to be re-emphasized and given the same attention that is offered to the other fundamentals of medicine. □

These M.D.-J.D.s say: 'Prophylaxis beats malpractice!'

HAROLD L. HIRSH, M.D., J.D., F.C.L.M.
EDWARD R. WHITE, M.D., J.D., F.C.L.M.
Washington, DC

'The cure for medical malpractice ills is to prevent them, not to change the practice of medicine or the laws that control malpractice actions.'

In the past few years the medical malpractice situation has rapidly escalated from mess to crisis, and it threatens to proceed unimpeded to disaster. Some legal measures have been instituted to lower the incidence of claims, but malpractice still poses great threats and requires intraprofessional measures. To that end, the malpractice situation may paradoxically represent a disguised opportunity for physicians and hospitals to look at their malpractice problems and institute specific measures to alleviate them.

Study goals

In an attempt to find a solution to the medical malpractice problem, the authors conducted a statistical study of patient claims in order to identify specific potential sources of malpractice common to the various medical specialties. Identification of the problem, we believed, would result in a lessening of malpractice and an improvement in the quality of health care delivery. Our study revealed an important solution: The cure for medical malpractice ills is to prevent them, not to change the practice of medicine or the laws that control malpractice actions. Since our study was conceived, the elaboration of risk management programs directed to this purpose has mushroomed.

Our preamble in undertaking a study of medical malpractice was that all people are careless or negligent from time to time.[1] We hoped that by identifying patterns of negligence based on patients' allegations we might determine the etiology and pathogenesis of malpractice claims. By equating patients' allegations with actual negligence, our purpose was not to justify or nullify the allegations, but to expose and analyze them as symptomatic of the malpractice crisis. By reviewing selected cases in order to identify these allegations, we hoped to be able to recommend specific measures that could be implemented by the health care provider to prevent or defend a law suit with a greater chance of success. It is immaterial whether the health care provider agrees with the patients' allegations; he must learn to deal with them if solutions to

TABLE I

Classification of Medical Malpractice Based on Categories of Negligence

Negligence in Diagnosis
- Deficiency in history and/or physical examination
- Negligent diagnostic testing
  - Failure to test timely includes failure to test, do proper test, or test at proper times
  - Negligent interpretation of findings
  - Injuries resulting from testing
- Introgenic reaction related to diagnosis or diagnostic misadventure

Negligence in Care and Management
- Negligent observation or treatment
- Negligent preoperative care
- Negligent prescription of specific treatment or performance of procedure
- Negligent postoperative management
- Unnecessary treatment
- Bad result
- Introgenic reaction related to therapy or therapeutic misadventure

Defective Consent
- Specific or express
- Informed

Breach of Contract or Warranty

Dr. Hirsh is clinical professor of medicine at Howard University College of Medicine and a professorial lecturer at the schools of law of George Washington University, Catholic University, and American University in Washington, DC. Dr. White is assistant chief of the division of legal medicine of the Armed Forces Institute of Pathology and adjunct professor at the Georgetown University School of Law, Washington, DC.

the malpractice problem are to be found.

Statistical sources

In organizing the study, we used three sources. The first was our analysis of 1,852 cases reported in the American Medical Association's *The Citation* from April 15, 1971 to July 1, 1977. Most were decisions by appellate courts. We selected *Citation* because it represents cases chosen by the Office of the General Counsel of the AMA for the purpose of enlightening physicians about their legal problems. The second source of data was 353 cases reviewed during the past six years by one of the authors in his role as a medicolegal consultant. The purpose of each review was to determine whether the patient had been treated in a substandard manner. Most cases did not proceed to litigation as a result of the review, and many supplied data that were not available in the litigated *Citation* cases. Finally, we attempted to correlate our data with statistics published by claims investigators and insurance company associations.

We were not concerned with the outcome of litigation because we observed that many cases were decided on technicalities, the relative abilities of the plaintiffs' and defendants' lawyers, economics, the philosophy and biases of the jury and judge, and the geographic location of the suit.

We did not start with any preconceived classification of the causes of medical malpractice claims, but we were able to develop a classification which can be applied to all specialties. Our classification of the causes of malpractice by categories of negligence is shown in Table I. Additional categories of negligence were not revealed in our cases; however, because we do not claim to have a study which is complete for all medical specialties, we have not included cases reported in other studies. We hope that this study will provoke others to review the problem.

A list of the causes of malpractice by specific medical specialty is given in Table II. Several specialties are not listed in the tables because they were not the target of a malpractice suit among the cases we reviewed. The total number of allegations in Table II exceeds the actual number of cases reviewed, for in a number of cases more than one health care provider was sued. In our review we attempted to identify each claim of negligence against each target. This explains the disparity in our figures.

'. . . physicians cannot find protection by seeing patients more frequently and/or ordering a battery of tests for the purpose of avoiding malpractice suits . . . Better records . . . afford better and more certain protection.'

TABLE III

Relative Frequency of Malpractice Claims According to Specialty

Specialty	No. of Claims
Medicine (General, Family Practice, Internal)	396
General Surgery	279
Orthopedics and Traumatic Surgery	256
Gynecology	184
Anesthesiology	74
Neurology and Neurosurgery	73
Obstetrics	69
Clinical Pathology	46
Psychiatry	44
Cardiology	37
Pediatrics	37
Urology	22
Radiology	21
Ophthalmology	14
Dermatology	8
Otorhinolaryngology	5
Allergy	3
Plastic Surgery	2

All cases involving defective consent, particularly informed consent, were seen recently. This is undoubtedly due to recognition by the courts of the duty of the physician to obtain informed consent for treatment. It may also reflect a reaction to the legislative barriers recently established to chill the pursuit of negligence suits.

In Table III we have listed specialties according to the incidence of lawsuits in which they were involved. This data does not conform with previously published frequency statistics.[2-4] It is noteworthy, however, that comparisons with more recent publications demonstrate a similarity between our data and recently published studies. Reports from a study by the National Association of Insurance Commissioners indicate that the majority of claims were against physicians who do not perform surgery.[5]

'. . . most of the cases studied could have been prevented had the health care providers exercised greater vigilance, diligence, and attention to the details of patient care, particularly in communicating with the patient.'

Orthopedists, obstetricians, gynecologists, anesthesiologists, and cardiologists follow in frequency and yet still generate a large number of claims. A noticeable shift in the culpability of specialties has occurred in recent years.

A claims analysis chart recently distributed by St. Paul Fire and Marine Insurance Company was also used as a basis for comparison with our study. Although their published statistics are predicated on somewhat different criteria, many of the findings are similar to ours. This consistency of results as to the preventable cause of malpractice suits should serve as an impetus to health care providers to implement prophylactic measures aimed at minimizing malpractice claims and awards.

'Defensive' prevention

Many have claimed that one undesirable consequence of malpractice litigation is "defensive" medicine. The "defensive" physician sees the patient more frequently and orders an excessive amount of unnecessary laboratory work to protect himself against malpractice litigation. Some of this preceded the malpractice crisis and was the result of other forces in the practice of medicine. In any event, our study shows that physicians cannot find protection by seeing patients more frequently and/or ordering a battery of tests for the purpose of avoiding malpractice suits. The tests must be proper, appropriate, and timely. The number of malpractice cases despite intensive testing, particularly in the fields of medicine, neurological diseases and obstetrics, belies the wisdom and security of extensive testing as a form of defensive medicine. We contend that better records, including adequate explanations for the physician's actions, afford better and more certain protection.[9]

Preventive measures

Our study has identified specific and potential sources of medical malpractice problems based on patient allegations. Most important among these, as indicated by the vast majority of claims against each specialty, is the failure of the physician to create and maintain an adequate relationship with his patient.[7] Inadequate records and attempts at coverup were the health care provider's downfall in a significant number of cases. Seldom were malpractice claims due to the errant, delinquent, deficient, or "sick" physician. Based on our study and others[8] continuing medical education, relicensure, or recertification may be important and desirable but they are not significantly related to malpractice.

The malpractice crisis is not due to ungrateful patients, greedy lawyers, an unsympathetic judiciary, unintelligent juries, unscrupulous insurance companies, or uncaring legislatures. Although physicians deride plaintiffs' lawyers, plaintiffs' lawyers blame physicians and/or insurers, and defense lawyers complain about jurors, these accusations are not often appropriate. The allegations may be true in particular situations, but generally they have not had a significant impact on the malpractice situation.

Our conclusions, based on patient allegations, is that most of the cases studied could have been prevented had the health care providers exercised greater vigilance, diligence, and attention to the details of patient care, particularly in communicating with the patient.[7] Improper drug therapy and failure to test timely were also important in creating malpractice claims. These causes would not seem to require difficult or complex solutions.

There are those who believe that the jeopardy of a malpractice suit has improved the caliber of medical practice. Whether or not this is true, instituting reforms to prevent malpractice claims will automatically improve health care.

The problems discussed above are real, and the measures to prevent them are obvious and can be realistically accomplished by making physicians and the public aware of the problem. We believe that solutions can and will be found and implemented more successfully than in the past. Prophylaxis *can* beat malpractice. □

Neurosurgery changed by malpractice crisis

WILLIAM F. BOUZARTH, M.D.
Philadelphia

While members of this specialty cry 'help' in the face of a continuing malpractice crisis, the author says they are speaking for other physicians as well as patients. All are suffering because of the problem.

To prepare for the Pennsylvania Medical Society House of Delegates special meeting on malpractice which was held in April 1977, a questionnaire was sent to practicing neurosurgeons in Pennsylvania. It was estimated that 103 neurosurgeons received the questionnaire, but only 64 completed most of the 14 questions. Thus, the validity of the facts to be presented is subject to question; nevertheless, the answers were analyzed by a computer and the following facts were uncovered.

The first question asked neurosurgeons if they had stopped doing certain operations or procedures because of malpractice. Over half (55 percent) had! The next question requested a list, limited to three, of operations that were no longer being performed. Procedures that affected human personalities, such as lobotomies, were mentioned by 14. Surgical procedures to alleviate pain, such as cordotomy, were a close second at 12. Six neurosurgeons, most of whom were from Philadelphia where there are two pediatric hospitals, had stopped doing pediatric neurosurgery. Carotid endarterectomy or surgery for intracranial aneurysm were being referred to others by four neurosurgeons. Six additional operations were not being performed by five additional neurosurgeons.

Dr. Bouzarth is clinical professor of neurosurgery at the Medical College of Pennsylvania and a founding member of the Pennsylvania Neurosurgical Society, which he represents in the Pennsylvania Medical Society's House of Delegates.

Another question concerned an arbitrary refusal to accept certain types of patients because of the malpractice problem. Over one quarter of the respondents (27 percent) answered that they had made such an arbitrary refusal. Seven mentioned that a decision had been based on the fact that the prospective patient was a lawyer or a member of a lawyer's family. Another seven would not accept referrals for personal injury of compensable nature. Four actively discouraged patients on public assistance. Eight neurosurgeons (14 percent) had resigned from certain hospitals because of malpractice. Six located in or moved to an area considered to be low in malpractice potential, and one went to Canada.

These statistics suggest that nearly half of the respondents have modified their practice in a negative way. Even if non-respondents have not done so, this still leaves one third of Pennsylvania neurosurgeons that have!

Appraisal of neurosurgical practice indicates that neurosurgeons working in groups tend to offer better quality patient care than those in solo practice. Assuming this to be correct, 41 percent of the respondents wanted an associate or an additional associate, but were precluded by malpractice costs.

When asked at what level a malpractice premium would price neurosurgeons out of Pennsylvania, seven doctors admitted that the requested Argonaut increase to $18,556 would force early retirement or cause them to abandon their Pennsylvania practice. Twenty-eight considered a $25,000 premium as the break point (8 percent were from the less dense areas of the state), sixteen drew the line at $40,000, and two would close their offices if the premiums exceeded $50,000. Four, somewhat unrealistically, would pass on the cost of premium hikes to their patients. It is interesting that ten of the respondents did not answer this question. All but one of these was insured by a hospital or a university. Further analysis indicated that neurosurgeons in private practice in Philadelphia, Delaware, and

Montgomery counties could not adjust to high premiums as readily as those who practiced in less populated regions, indicating that their income is not as high as is commonly believed.

Responses to the first eleven questions were then analyzed according to the neurosurgeons' current malpractice carrier. The most common carrier was Argonaut, followed by hospital master policy, Medical Protective, and other coverage. Each neurosurgeon was requested to locate his practice in one of five areas: city of Philadelphia, Delaware or Montgomery Counties, Bucks or Chester Counties, Allegheny County, or the remainder of the state. None of the answers related significantly to the type of malpractice coverage or to the location of practice, except that those individuals who were insured by a hospital or university seemed less concerned about changing their practice or the effect of higher malpractice premiums.

Physicians who practice in the Philadelphia or Allegheny standard metropolitan statistical areas were comparatively more concerned about malpractice than were neurosurgeons in less urban areas. Despite this, little difference was seen between respondents who carried less expensive malpractice coverage and those covered by Argonaut. Incidentally, Argonaut insurance coverage was purchased by 50 percent of the neurosurgeons.

A final question asked for suggestions for resolving the malpractice problem. Four doctors favored the formation of a captive insurance company. Eight others offered single suggestions, the most significant of which was the feeble plea, "Help!" □

Physicians fund resumption of NAIC claims study

Statistical studies of medical professional liability claims by the National Association of Insurance Commissioners (NAIC) resumed July 1, supported by component societies in the Council of Medical Specialty Societies (CMSS).

Richard S. Wilbur, M.D., CMSS executive vice president, said in announcing the project, "A major impediment to solving the serious medical liability problem has been the lack of statistically valid data. Essentially, the objective of the study is to gather facts on what went wrong and why it went wrong. Then, our component societies participating in this project will work with their members, through continuing education programs aimed at patient safety and risk management, to help prevent the types of incidents that lead to many claims."

Funding will occur principally through voluntary grants from CMSS member societies, and from physician-owned professional liability insurance companies. The issuance of study quarterly reports, of which four have been published to date with the last covering the period ending June 30, 1976, will resume as soon as practical.

The NAIC Closed Claims Malpractice Study was initially undertaken in 1975 and was cofunded by the NAIC and insurance companies. The first study analyzed 25,000 claims closed during a twelve-month period beginning July 1, 1975. Study was discontinued after withdrawal of financial support by the insurance companies.

The Cancer Information Service (CIS) has begun servicing physicians and residents of eastern Pennsylvania by offering a toll-free telephone line (1-800-822-3963) to answer questions from professionals and the public about cancer causes, detection, diagnosis, and treatment. CIS will also provide information on local resources for cancer care and rehabilitation.

The program, which is administered by the Fox Chase Cancer Center in cooperation with the American Cancer Society, does not recommend particular physicians or hospitals, nor does it become involved with existing physician-patient relationships.

Now serving Delaware, greater New Jersey, and eastern Pennsylvania, the CIS will soon be extended to include the 34 counties in the eastern half of the state.

AAP warning ignored

Children under age eight receive tetracyclines under prescription from their physicians in spite of the American Academy of Pediatrics' warning that the drugs can cause complications in young children.

A recent study, conducted by Vanderbilt University's medical school and published in the Journal of the American Medical Association (JAMA), has revealed that of 59,000 children enrolled in Tennessee's medicaid program, 4,026, or about seven percent, had taken tetracyclines on prescription from their doctors. About 27 percent of 1,947 physicians surveyed had prescribed tetracyclines for children at least once; 134 doctors accounted for 84 percent of all prescriptions while 26 doctors wrote 54 percent.

More than two years ago the American Academy of Pediatrics had issued a warning that "few, if any," reasons exist for prescribing the drugs to children under age eight.

editorials

When to test — individual judgments required

Rising medical costs have had so much media attention that the average physician is becoming tired of listening to the repetitive charges. Radio, television, newspapers, and magazines have zeroed in on the subject. Even medical journals are publishing papers and editorials with the usual charges and countercharges.

Defensive medicine has been named as one of the causes of spiraling health care costs, but very little has been written on the subject. Defensive medicine might be defined as overutilization of diagnostic tests because, to avoid a malpractice suit, one should investigate every possibility, that is, cover all bases.

Do we perform too many tests? There is no clear answer—either a yes or a no reply must be qualified.

This example concerns one of your patients whom you've seen many times and know well. He has a sprained ankle. You examine the ankle, explain that you are fairly sure that he has a sprain, and prescribe treatment, including instructions that he should return in a specified number of days if there is no improvement.

If the same patient goes to the emergency room with the same complaint, the emergency room physician probably would order radiographic studies to rule out a fracture. The E.R. physician is not less competent, but he takes the additional precaution because the patient is a stranger, so that no personal physician-patient relationship exists. The emergency room itself is a "high risk" area with regard to the filing of malpractice suits.

Another of your patients has a renal disorder. In the course of providing routine care, you need one or two electrolyte values, and a uric acid and BUN value. But you know that in the automated laboratory, the actual cost of performing these tests individually varies between 20 and 50 percent higher than the renal profile which includes nine studies. Because automated laboratories have increased efficiency and reduced costs, you obtain additional information to assist your evaluation at less cost.

Your last patient today comes in because of a specific problem. You are reasonably sure the symptoms are due to a common ailment, but circumstances necessitate tests to rule out more serious causes. In this specific case, the patient has what appears to be bronchitis. There is a family history of malignancy, and the patient, who also smokes, wants a chest x-ray. Your judgment tells you the patient has bronchitis, but in view of the family history, the smoking habit, and the anxiety, are you not obligated to explore further? Medicine is not an exact science—extenuating circumstances such as these influence the ordering of diagnostic tests. How much do planners, managers, and bureaucrats know of these complexities?

There is an indication that the government plans an attack on physicians' fees, specifically with regard to the number of tests performed. If this occurs, who then will be responsible for an error in judgment resulting in the death or disability of a patient? This would be penny wise and pound foolish government regulation and an invasion of the normal physician-patient relationship. As Ben Franklin said, "Bad gains are true losses."

David A. Smith, M.D.
Medical Editor

Relaxation is relaxation is relaxation

Relaxation is a physiological state that can be achieved by anyone who is not organically paralyzed. If one has power to utilize his skeletal muscles he can learn to shut off completely the power going to them and by doing so can bring a state of relaxation that will cause demonstrable physiological changes. With reduction in tenseness and lessening of rigidity and firmness in muscles, the expenditure of energy is reduced and a resting state is established. Not only do the muscle fibers rest in this state, but millions of nerve cells that must be activated to maintain a state of tension are also able to rest and restore their functioning capacity.

With the reduction of muscular tension the readiness to respond to stimuli is reduced in the nervous system at all levels and physiological changes can be readily observed when a truly relaxed state is established. The first change observed after the muscles become limp and loose is a reduction in the rate of breathing.

When in medical school I served as a summer resident in the White Haven Sanitorium for the treat-

ment of tuberculosis and there I was impressed by the value of muscle relaxation and thought control as taught patients by Doctor Joseph Walsh.

Doctor Walsh presented to patients ways in which they could contribute to the healing of their diseased lungs. In the wards he informed the patients that it was essential to do everything possible to diminish movement in the lungs. He pointed out that when one has a cracked lip or cut knuckle he avoids movement so that healing will be accelerated. He advised against deep breathing, yawning, and especially coughing, which creates tumult in the lungs. He taught patients to reduce movement in the lungs by diminishing the body's need for oxygen. This can best be accomplished by relaxing the muscles since they are the largest consumers of oxygen. When it was apparent to him that all patients were reasonably relaxed he instructed them in abdominal breathing and began to call the inhalations and exhalations at a progressively slower rate as he encouraged deeper and more profound relaxation. As he steadily slowed the breathing rate it was amazing to see the patients breathing six or even four times a minute as they seemed to achieve a state of suspended animation. He then encouraged the patients to try to be relaxed at all times and to do everything slowly and with the least possible expenditure of energy.

Several years later I recognized the elements of suggestion and hypnosis that were so effective and, when I later told Doctor Walsh that I felt he was a magnificent hypnotist, he was astonished that I regarded his work in this light.

In addition to the physical benefits gained through relaxation, Doctor Walsh assured patients that when they became relaxed a state of composure was established and their anxiety and concern about their illness and their future would be diminished and their ability to face life with confidence would contribute to their happiness.

Years later I had an interesting conversation with a woman who had a summer camp in the Poconos for young girls. The camp was located in a forested area and many of the children were afraid of the darkness and the strange noises of the woods. She handled this problem by a technique she had developed. Each night she went into the cabins at bedtime and made a game of getting them to relax and make their bodies go limp. When all were relaxed and apparently drowsy, she announced that there was a magic word they could repeat silently in their minds so that they would sleep soundly and awaken ready for a wonderful day. The magic word she gave them was "hemlock." This same magic word worked for all of them. Each did not have her own special "mantra" as in the system of "transcendental meditation" taught by Maharishi Mahesh Yogi. With or without a mantra relaxation will work for anyone who concentrates on shutting off power going to muscles. The result will be an improvement in physical and mental health with little professional help.

During periods of relaxation when muscles and other tissues require less oxygen, the respiratory rate is diminished, the heart rate is slowed, and blood pressure is lowered because the reduced muscle tension and the reduced pressure in the fascial planes between the muscles permit blood to flow against lessened resistance. As skeletal muscle tension is reduced the responsiveness of the nervous system at all levels is lessened, the spastic state in the gastrointestinal tract is relieved, and the flow of hydrochloric acid is cut down; relief of the peptic ulcer syndrome can be dramatic.

The physiological changes that occur in a relaxed state can be observed easily and, with the use of biofeedback, can be shown to the patient. The apparatus that records these changes graphically impresses on the patient that relaxation can alter important body functions and lead to improved physical and mental health. "One picture is worth a thousand words" and this procedure convinces patients who would otherwise be resistant to using the technique that relaxation is an effective measure.

Every physician should learn to help patients relax and enlist the patient's own efforts in improving his state of health. Hypertension, peptic ulcer, tension headaches, spastic colon, and many other disorders can be greatly improved by creating a relaxed state.

Relaxation is relaxation and it can be utilized to improve body and mental health without the convincing aid of biofeedback equipment, the use of a mantra selected by a trained disciple of Maharishi Mahesh Yogi, or any other mystical measures.

Combined operative intervention for coronary artery disease (CAD) coexisting with other surgically correctable heart lesions constitutes about 8 percent of aorto coronary bypass (ACB) procedures in published series. However, the indications for surgical treatment of these combined cardiac lesions are not clearly established. The operative mortality is relatively high and there is little information about the long term results.

The advent of coronary arteriography has revealed that CAD coexists with other surgically correctable heart diseases in as many as one third of patients. Surgical treatment of these patients includes both ACB and procedures for correction of the coexisting heart disease. Published series include relatively few patients, for surgical mortality is usually much higher than the cumulated mortality for the surgical treatment of CAD and the coexisting heart disease.

Materials and Methods

During a 39 month period ending March 31, 1974, 30 patients (22 men and 8 women) ranging in age from 41 to 67 (average 54.3) years underwent aorto coronary bypass with concomitant heart procedures.

Preoperative coronary arteriography and left ventriculography were performed on all patients. Right and left heart catheterization was done when indicated. Cardiopulmonary bypass with hemodilution and mild hypothermia was used in each operation.

Thirty-five grafts, of which five were derived from internal mammary arteries and thirty from saphenous veins, were used on the thirty patients. Twenty-five patients received single grafts and five received double grafts. Only one of the 30 patients required gas endarterectomy of the left anterior descending coronary artery at the time of ACB. The left anterior descending coronary artery was grafted in 16 patients, the right coronary artery in 12, the marginal branch of the circumflex coronary artery in 6, and the diagonal branch of left anterior descending in 3 patients. In addition, 14 patients had 20 diseased coronary arteries with nonsurgically correctable lesions.

The type of concomitant heart procedure required as well as the sex and age of the patients, their preoperative functional class and history, the duration of symptoms, and the indication for operation are presented in Table I. The most common symptoms were those of congestive heart failure and angina. The patients whose coexisting heart lesion was mitral valve disease had the longest preoperative symptomatology.

The left ventriculogram was abnormal in 27 of 30 patients; 16 had elevated left ventricular end-diastolic pressure at rest ranging from 14 to 44 (average 23) mm Hg.

The type of valvular disease and the presence of known rheumatic fever in the history of the patients who underwent valvular procedures are presented in Table II. The mean pulmonary arterial pressure of the patients with mitral valve disease ranged from 21 to 55 (average 31) mm Hg. The gradient across the aortic valve of the patients who had pure aortic stenosis ranged between 75 and 90 (average 82) mm Hg. The subvalvular gradient after provocative measures on the one patient who had idiopathic hypertrophic subaortic stenosis (IHSS) was 115 mm Hg.

Beall valve was used for mitral valve replacement. Aortic valve was replaced with Magovern valve in all the patients.

Eleven of 26 patients who survived the operation had postoperative heart catheterization between 2 and 27 (average 13) months after the operation. All patients who survived were monitored until March 1975, for an average of 32.4 months.

The authors are associated with the department of thoracic and cardiovascular surgery of the Allegheny General Hospital, Pittsburgh. Address reprint requests to George J. Magovern, M.D., Department of Surgery, Allegheny General Hospital, Pittsburgh, Pennsylvania 15212.

Results

Four operative deaths and seven late deaths resulted within 30 days of the operation. The causes and times of deaths are presented in Table III. Postoperative and late nonfatal complications are presented in Table IV.

Patients with aortic valve replacement had very good results. Patients with mitral valve procedures demonstrated the poorest operative and long term results.

Of the 26 patients who survived the operation, 22 showed improved symptomatology, three were unchanged, and one showed deterioration after the operation. All patients who did not improve after the operation died in the late postoperative period. Of the 19 patients who are still living, all but one work full time or enjoy active retirement; some even participate in sports.

Postoperative catheterization findings are presented in Table V. Nine of eleven patients who had postoperative catheterization did not show improvement of the left ventricular function.

Discussion

Valvular heart disease and left ventricular aneurysm are the most common surgically correctable heart lesions coexisting with CAD.

In Loop's[2] series, 56 percent of the patients who demonstrated left ventricular aneurysmectomy required combined revascularization operations of the remaining myocardium.

Valvular heart disease does not alter the incidence of CAD. Recent publications[3-5] demonstrate that CAD is present in 4 percent of patients suffering from valvular heart disease. Loop, et al.[6], report that 8.4 percent of patients who had mitral and/or aortic valve replacement had CAD that justified myocardial revascularization procedures. The great variation of the reported incidence of CAD apparently is due to the fact that different criteria were used by the authors to determine the severity of CAD.

Patients suffering from surgically correctable heart lesions coexisting with CAD have been treated in the past without the correction of CAD by surgical intervention. The results of such management have been unsatisfactory.[7,8] The advent of direct myocardial revascularization has made possible ACB combined with additional procedures for correction of coexisting heart diseases. In a collective series[9-12] examining 3,924 patients with ACB, 305 patients (7.7 percent) needed additional procedures for correction of coexisting left ventricular aneurysm and/or valvular heart disease. Patients reported to have had emergency ACB for acute myocardial infarction with or without infarctertomy are not included in this review.

According to Oran, et al., patients with IHSS coexisting with CAD were treated surgically for the CAD alone.[13]

The authors performed 718 consecutive ACB procedures in a 39 month

period. Additional procedures were required in 30 (4.2 percent) of the patients in order to correct coexisting heart diseases, including IHSS and constrictive pericarditis.

Comparative data are given in three[9-11] of the previously mentioned collective series. The operative mortalities for ACB alone were 7.1 percent, 1.0 percent and 5.9 percent, respectively. Operative mortality for the ACB combined with concomitant heart procedures (aortic and/or mitral valve procedure and/or left ventricular aneurysmectomy or plication) was 2 to 10 times higher, averaging 17.4 percent.

The authors' study shows that of 688 patients who had ACB alone, 19 (2.8 percent) died; there were four deaths among the 30 patients who had ACB combined with concomitant heart procedures during the same period.

Table VI presents the operative mortality (up to 30 first postoperative days) of a collective series of nine authors[2,3,5,6,9-11,14,15] whose 465 patients underwent ACB with concomitant heart procedures for correction of left ventricular aneurysm and/or valvular heart disease. Operative mortality rates vary widely among the authors.

Patients with nonrheumatic mitral regurgitation associated with CAD, left ventricular dysfunction, and/or elevated left ventricular end diastolic pressure are considered by the majority of authors to have the highest operative risk.[3,15,16]

Limited data on the long term results of surgical treatment of coronary atherosclerosis coexisting with other heart diseases do not permit definite conclusions; however, they suggest that long term results of patients undergoing aortic valvular procedures combined with ACB may be good. In our series, all four patients who underwent this kind of treatment three or more years ago are doing well. Anderson, et al.,[3] report an 80 percent 3 year survival rate and good functional results in their patients. Because medical treatment of these patients gives very poor results, we think that surgery is the treatment of choice.

It is not known whether aneurysmectomy combined with ACB improves the longevity of patients suffering from left ventricular aneurysm coexisting with CAD of the remaining myocardium. However, the quality of life of these usually severely incapacitated patients is significantly improved by surgery.[7]

Patients suffering from mitral valvular disease coexisting with CAD seem to be less responsive to surgical treatment. Only two of our six patients who had ACB combined with mitral valve procedures three or more years ago were alive in March 1975. High late postoperative mortality with this procedure has been reported by other authors.[17,18]

Indications for surgical treatment of patients suffering from CAD coexisting with other surgically correctable heart diseases are not clearly established. The absence of comparative late results between the medical and surgical treatment makes clearcut indications difficult. Kasparian, et al.,[5] gave "reasonable indications for surgery" in patients with CAD coexisting with chronic valvular disease.

Total	11	12	11	3	1	7	5	2	4

* No change

In view of our experience and the results of other authors, we think that if a segmental stenosis of 60 percent or more of one or more of the main coronary branches coexists with surgically correctable heart disease, ACB should be considered in addition to the usual indication for surgical correction of the coexisting heart problem. The opposite is also true; that is, if the patient has CAD which is severe enough to justify ACB, in addition to moderately severe surgically correctable heart disease, both lesions should be corrected in one surgical intervention in most cases. If both severe CAD with impairment of left ventricular function and severe coexisting heart disease are present, individualization should be carried out. This is particularly true when the coexisting problem is mitral valve disease, for both operative and late mortality are high. Apparently, the long term result is not greatly affected by the improvement of the valvular problem but, as the postoperative catheterization findings show, is determined primarily by the underlying myocardial status. □

TABLE VI
Surgical Mortality in Collected Series

Concomitant heart procedure	No. of patients	Mortality	Percentage	
			Avg.	Extreme values
Resection or plication of left ventricular aneurysm	152	23	15.1%	9.7-20%
Aortic valve	187	25	13.3%	5.4-85.7%
Mitral valve	104	23	22.1%	0-50%
Multiple valvular; valve and resection; plication of left ventricular aneurysm	22	8	36.4%	0-100%
Total	465	79	17.0%

PATIENT PACKAGE INSERTS: A CONCEPT WHOSE TIME HAS COME?

The consumer's right to know is an irreversible and desirable trend of the Seventies. It extends, and properly, to a patient's right to know more about his or her prescription medications. One way, gaining favor, is through patient package inserts. Wisely-prepared and properly distributed when medically indicated, they could markedly improve patient knowledge and drug therapy—laudable goals by anyone's standards.

The PMA endorses these goals and will work with government, the health professions and consumers to achieve them.

The Advantages

The concept holds promise of benefits: better patient understanding of the product prescribed, better adherence to the treatment plan, and more awareness of possible side reactions.

Every doctor has had patients who fail to finish antibiotic regimens because they feel better. Some patients assume that if one tranquilizer or analgesic is good, two may be twice as good. Still others fail to report dizziness while on antihypertensive therapy —and so on.

Problems like these might arise less often if the patient received written information in addition to verbal instructions. Some studies suggest that patients are more receptive to such materials, and they more often understand the verbal instructions and follow them, when inserts are used.

The Disadvantages

There are also some potential problems. Obviously, the inserts must be clearly phrased, without extraneous or complex detail. How much information is enough? How can it be kept current? Should all patients receive the same information? Should inserts be included with all drugs? Should only potential problems be listed or are patients better off with a "fair balance" presentation that describes usefulness as well as drawbacks?

These and similar questions require answers, since model inserts have yet to be properly developed and tested. Despite the need for these studies, the FDA is proceeding prematurely with inserts on selected products. We think the Congress is the only place where the matter can be given the proper legal status and direction, particularly since it represents a conceptual change in the legal, medical and social framework of the nation's prescription drug information system.

The Solution

The PMA believes that carefully-devised pilot studies of various kinds of inserts are needed. They should be developed and implemented with full participation by doctors, pharmacists, consumers, communications experts and the drug industry. Such studies will provide reliable pathways to follow, so that inserts will be useful aids to medical practice.

And particularly we think that you should be closely involved in this debate and in these studies and decisions. Otherwise, people with less experience and qualifications may control the purposes, content and use of a tool with considerable promise for improved patient care. It could make a difference in your practice tomorrow, and more importantly, in the health of your patients.

A CLEAR TREATMENT ADVANTAGE FOR PATIENTS WITH IRRITABLE BOWEL SYNDROME*

Adjunctive/Dual-Action LIBRAX®

Each capsule contains 5 mg chlordiazepoxide HCl and 2.5 mg clidinium Br.

ONLY LIBRAX PROVIDES THE SPECIFIC ANTIANXIETY ACTION OF LIBRIUM® (chlordiazepoxide HCl) PLUS THE POTENT ANTISPASMODIC ACTION OF QUARZAN® (clidinium Br)

Please consult complete prescribing information, a summary of which follows:

* **Indications:** Based on a review of this drug by the National Academy of Sciences—National Research Council and/or other information, FDA has classified the indications as follows:
"Possibly" effective: as adjunctive therapy in the treatment of peptic ulcer and in the treatment of the irritable bowel syndrome (irritable colon, spastic colon, mucous colitis) and acute enterocolitis.
Final classification of the less-than-effective indications requires further investigation.

Contraindications: Patients with glaucoma; prostatic hypertrophy and benign bladder neck obstruction; known hypersensitivity to chlordiazepoxide hydrochloride and/or clidinium bromide.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering Librium® (chlordiazepoxide hydrochloride) to known addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

As with all anticholinergic drugs, an inhibiting effect on lactation may occur.

Precautions: In elderly and debilitated, limit dosage to smallest effective amount to preclude development of ataxia, oversedation or confusion (not more than two capsules per day initially; increase gradually as needed and tolerated). Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider pharmacologic effects of agents, particularly potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: No side effects or manifestations not seen with either compound alone have been reported with Librax. When chlordiazepoxide hydrochloride is used alone, drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are avoidable in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally with chlordiazepoxide hydrochloride, making periodic blood counts and liver function tests advisable during protracted therapy. Adverse effects reported with Librax are typical of anticholinergic agents, *i.e.*, dryness of the mouth, blurring of vision, urinary hesitancy and constipation. Constipation has occurred most often when Librax therapy is combined with other spasmolytics and/or low residue diets.

Dosage: Individualize for maximum beneficial effects. Usual maintenance dose is 1 or 2 capsules, 3 or 4 times a day, before meals and at bedtime. Geriatric patients—see Precautions.

How Supplied: Librax is available in green capsules, each containing 5 mg chlordiazepoxide hydrochloride (Librium®) and 2.5 mg clidinium bromide (Quarzan®)—bottles of 100 and 500; Tel-E-Dose® packages of 100; Prescription Paks of 50, available singly and in trays of 10.

LIPO-NICIN

A PERIPHERAL VASODILATOR

IMMEDIATE or GRADUAL

nicotinic acid therapy

IMMEDIATE RELEASE

LIPO-NICIN/100 mg.
Each blue tablet contains:
Nicotinic Acid .....100 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 5 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

LIPO-NICIN/250 mg.
Each yellow tablet contains:
Nicotinic Acid .....250 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

GRADUAL RELEASE

LIPO-NICIN/300 mg.
Each time-release capsule contains:
Nicotinic Acid .....300 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (H-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
In a special base of prolonged therapeutic effect.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500.

Indications: For use as a vasodilator in the symptoms of cold feet, leg cramps, dizziness, memory loss or tinnitus when associated with impaired peripheral circulation. Also provides concomitant administration of the listed vitamins. The warm tingling flush which may follow each dose of LIPO-NICIN 100 mg. or 250 mg. is one of the therapeutic effects that often produce psychological benefits to the patient. **Side Effects:** Transient flushing and feeling of warmth seldom require discontinuation of the drug. Transient headache, itching and tingling, skin rash, allergies and gastric disturbance may occur. **Contraindications:** Patients with known idiosyncrasy to nicotinic acid or other components of the drug. Use with caution in pregnant patients and patients with glaucoma, severe diabetes, impaired liver function, peptic ulcers, and arterial bleeding.

TREAT THE SYMPTOMS IN THE GERIATRIC PATIENT

APATHY • IRRITABILITY
FORGETFULNESS • CONFUSION

Cerebro-Nicin® CAPSULES

A GENTLE CEREBRAL STIMULANT & VASODILATOR FOR GERIATRIC PATIENTS

Each CEREBRO-NICIN capsule contains:
Pentylenetetrazole .....100 mg. • Nicotinic Acid ...100 mg.
Ascorbic Acid .....100 mg. • Thiamine HCl .....25 mg.
l-Glutamic Acid .....50 mg. • Niacinamide .....5 mg.
Riboflavin .....2 mg. • Pyridoxine HCl .....3 mg.
AVAILABLE: Bottles 100, 500, 1000
SIDE EFFECTS: Most persons experience a flushing and tingling sensation after taking a higher potency nicotinic acid. As a secondary reaction some will complain of nausea, sweating and abdominal cramps. The reaction is usually transient.
INDICATIONS: As a cerebral stimulant and vasodilator.
RECOMMENDED GERIATRIC DOSAGE: One capsule three times daily adjusted to the individual patient.
WARNING: Overdosage may cause muscle tremor and convulsions.
CONTRAINDICATIONS: Epilepsy or low convulsive threshold.
CAUTION: Federal law prohibits dispensing without prescription. Keep out of reach of children.

Computers and medicine

Computer law 'new and explosive'

EDWARD H. ACHORN, M.Adm., C.P.A.
DONALD L. DeMUTH, M.B.A., C.P.A.
Harrisburg

When a physician thinks of legal problems, he normally thinks of malpractice. However, for much the same reason, he should examine the legal side of computers. This article is intended to raise some basic questions, and to provide some do's and don'ts.

The common misconception regarding computers is that they can handle medical decisions. Computers may be delegated that authority in part, but hospital management and the physician must select the criteria and construct the decision tables. In other words, the responsibility still rests with the physician or hospital management.

When legal questions arise in connection with operation of a computer system, the basic questions to be asked will evolve from the phrase "ordinary and reasonable care." If you are among those using or contemplating use of electronic data processing (EDP), there are some things you should know to preclude future grief. The computer law field is new and explosive. Few attorneys would consider themselves experts, but an attorney should be consulted before becoming involved in EDP contracts. Normally the only time a contract is referred to is when there is trouble. If you have used the services of a consultant in developing your system, involve him in developing sound computer contracts.

Just as you would not sign a purchase agreement and settle for real estate without consulting an attorney so you should be equally prudent when entering a computer contract. The total outlay for a computer system including software and hardware could equal or exceed that of real estate.

Some recent situations are cited for emphasis.

An airline passenger reservation system was installed and goofed. Result: The airline sued the manufacturer for $70 million, and a countersuit of $11.5 million for the hardware was filed by the manufacturer.

A publisher sued a software firm for $2.5 million when a mailing list maintenance program didn't work properly and large numbers of names were either duplicated or dropped.

As "on line" systems become more common, and as mini-computers begin to saturate the market, more and more people will be suing because someone did not use proper care.

Other areas are equally vulnerable. A company officer—or a physician—cannot ignore the computer. A landmark Supreme Court decision in 1891 held, "The degree of care required of directors of corporations depends upon the subject to which it is applied, and each case is to be determined in view of all the circumstances . . . directors . . . must exercise ordinary care and prudence."

Ordinary care and prudence applies to the physician who should investigate the computer for: practice management, third party billing, accounts receivable, patient billing, scheduling, patient history, multiphasic health testing, computer assisted diagnosis, medical records, physiological monitoring, and EKG interpretation.

Professional liability also has found its way into the computer field. The physician's practice is not an isolated case for malpractice. (And this is something to look for when deciding which firm to use. Question: The scope of its errors and omissions insurance? Question: Does the contract restrict damages to the amount of the bill?) Consequential damages can be severe. A recent article in the *Wall Street Journal* illustrates the point. In an effort to promote public relations, a midwestern motel chain sent thank you letters to its recent occupants. Unfortunately, the computer operator inserted "Mrs." on each of the mailing labels. Needless to say, many lawsuits resulted. At many points along the way, this could have been prevented by reviewing the work for quality. It is usually possible to place sufficient control on commercial applications (billing, ledger, etc.) to preclude major problems in these areas.

This article is the last in a series on computer management techniques for physicians. The authors are on the faculty of the Pennsylvania State University's Capitol Campus, Middletown. Mr. Achorn is an assistant professor of accounting and management and Mr. DeMuth is an assistant professor of accounting and finance.

The field is new, however, and the techniques for placing controls on medically oriented programs are not fully developed. Computer output in these applications must be examined with a scrutinizing eye.

Computer privacy

The privacy problem is one which must be resolved. A physician should not permit access to medical records to just anybody, but placing them on a computer makes them available to maintenance personnel, computer operators, or anybody who has access to a terminal. Access to the computer can be restricted by requiring a code to retrieve medical records. This code will be only as good as the fidelity of those using it, but that is true of manual systems as well.

Even to those outside the medical profession, carelessness in the use of data is a bad trait. One safeguard is the communication of the idea of privacy to those around the system. Tell them, "Keep your hands off."

In connection with computer security, a catastrophe plan should be developed. The physician should copy the files and programs, and store this valuable information in a fire-proof vault or in a location away from his office.

Avoiding inaccuracies

Inaccurate information and its use can result in serious illness or death. These types of problems can occur from several sources:

1. Inaccurate programming, resulting in the loss or misassignment of medical record entries.
2. Miscoding of information for the computer by an aide or nurse.
3. Misrecording, again resulting in loss of information or incorrect infor-

mation.

Who will ultimately be held responsible? The programmer? The aide? The keypunch operator? The physician? There are no simple answers, and in each case the circumstances will dictate. Most software (programming) contracts place the final responsibility on the user to test programs thoroughly. Unquestionably the physician will be at risk. The following steps should safeguard against such contingencies.

1. Check test runs thoroughly before using.
2. When program modifications are made, check them just as thoroughly. This means everything, not just the area changed.
3. Require the programmer to provide a logic diagram, and insist that all parameters of that diagram be tested. Do not use the program until this is done.
4. Become critical of computer output. If something does not look right, do not accept it. If strange numbers appear, insist on knowing why, and have them corrected—not eliminated, but corrected.

Signing the contract

There are contracts and there are contracts. The most common types are service, hardware, and combinations. Most often the contract includes the phrase, "Anything written or verbal not contained herein . . . " Where does this leave the ultimate user? One has to look to the proposal for answers. It should include:

1. Specifications of the hardware.—What it can and cannot do.
2. Specifications of the software.—What it can and cannot do.
3. Details of programs and program language.
4. Details of implementation and whose responsibility it is to do what.
5. Specifics as to when contractors' outside assistance is concluded.
6. Method and time for billing and payment for hardware and software.
7. System parameters—volumes, cycles, timing, interfacing requirements. These are ultimately the user's responsibility. Care should be exercised to insure that a clear understanding exists between user and contractor. Example: A daily cycle for a given process versus a weekly cycle will probably increase the required computer time by five times. Time costs money. Someone ultimately will pay for that kind of mistake, so why not avoid it?

One common sense approach to the contract problem is to examine and *understand* the proposal. If sections need clarification, have them clarified in writing. Once all is clear and acceptable, make the proposal a part of the contract. This can be done by accepting the contract by letter and including the proposal as part of the acceptance.

In dealing with software firms and service bureaus, certain other questions must be raised. Most firms will profess to "know how." It is a simple matter to prove performance by checking out references. When dealing with service bureaus, the question of program ownership arises. Package systems are usually owned by the bureau.

The question arises, "What do I do if for one reason or another the contract is terminated?" Some bureaus will sell an interest in or license use of the programs in this event. If the bureau designs a special system, you should contract to possess title. Care should be used to insure that you will receive source (not object) programs in a common program language (RPG, Cobol, Bal, and Autocoder are the most common). Further, it is no help to have programs if there is no equipment on which they may be run. For example, the IBM Systems 3 and 360 are probably the most common systems. Yet there is such a wide range of specs that it is common—even with these—to have to do a detailed search for compatability. Ask the bureau if there is back-up and where it is located.

Another aspect to consider is financial stability. The mortality rate of software and hardware firms has been high. If your bargain is too shrewd, you may be a captive customer. Will you have to pay more just to keep the business going?

Third party contracts are available for both software and hardware. A good software agreement should include: the basis for billing; upper limits on price; responsibilities of both parties regarding layout of the system, programming, documentation of procedures, setup and testing, scope of tests and who sets them up; who owns the programs; where the work is to be done; who pays for travel, computer test time, supplies, and incidentals; who is responsible for supervision; the system covered under the basic agreement; and the rates for extras.

For hardware, a third-party agreement may be one of two types, financial or operating. Generally, a financial lease is nothing more than another way of financing the purchase of equipment. In general, when committing to computer equipment one should commit to an extended period, so there is probably nothing wrong with this kind of lease, provided several key questions are covered:

Is the system upward expandable?

Could a more economical rate be secured through conventional financing?

What provisions exist to take title to the hardware during or at the end of the lease?

Who gets the investment credit?

An operating lease is one which covers a fixed term and under which no equity is gained. These are usually more costly and the user has the option to return the equipment. In general, it will be shorter in term. The argument frequently is made that this type is attractive because of obsolescence. If the physician takes the pains to examine the proposed system and feels that it is adequate for a period of five years (some vendors will prove the system and run it on a service basis for a period to satisfy the user), obsolescence is not a factor. Once the hardware is paid for, costs drop drastically.

Maintenance on computer equipment can be secured from the manufacturer, another user, or a third party service company. Generally all have been satisfactory. However, when the system consists of the hardware of multiple vendors, problems arise in establishing cause of failures. If possible, it is best to deal with one service organization, for then responsibility will be pin-pointed.

Does all of this seem complicated? It need not be. There is no substitute for common sense. Most of the areas of concern respond to just that. It is simply necessary to understand the system, the responsibilities, and the hazards. This requires common sense and time. □

consider the effect on coexisting diabetes when you prescribe a vasodilator*

(POSTERIOR VIEW OF PANCREAS)

no interference in the management of the diabetic patient has been reported with

VASODILAN® (ISOXSUPRINE HCl)

the compatible vasodilator TABLETS, 20 mg.

***Indications:** Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.
Vasodilan injection, isoxsuprine HCl, 5 mg., per ml.

Dosage and Administration: Oral: 10 to 20 mg., three or four times daily.
Intramuscular: 5 to 10 mg.(1 or 2 ml.) two or three times daily. Intramuscular administration may be used initially in severe or acute conditions.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Parenteral administration is not recommended in the presence of hypotension or tachycardia.

Intravenous administration should not be given because of increased likelihood of side effects.

Adverse Reactions: On rare occasions oral administration of the drug has been associated in time with the occurrence of hypotension, tachycardia, nausea, vomiting, dizziness, abdominal distress, and severe rash. If rash appears the drug should be discontinued.

Although available evidence suggests a temporal association of these reactions with isoxsuprine, a causal relationship can be neither confirmed nor refuted.

Administration of single dose of 10 mg. intramuscularly may result in hypotension and tachycardia. These symptoms are more pronounced in higher doses. For these reasons single intramuscular doses exceeding 10 mg. are not recommended. Repeated administration of 5 to 10 mg. intramuscularly at suitable intervals may be employed.

Supplied: Tablets, 10 mg., bottles of 100, 1000, 5000 and Unit Dose; Tablets, 20 mg., bottles of 100, 500, 1000, 5000 and Unit Dose; Injection, 10 mg. per 2 ml. ampul, box of six 2 ml. ampuls.

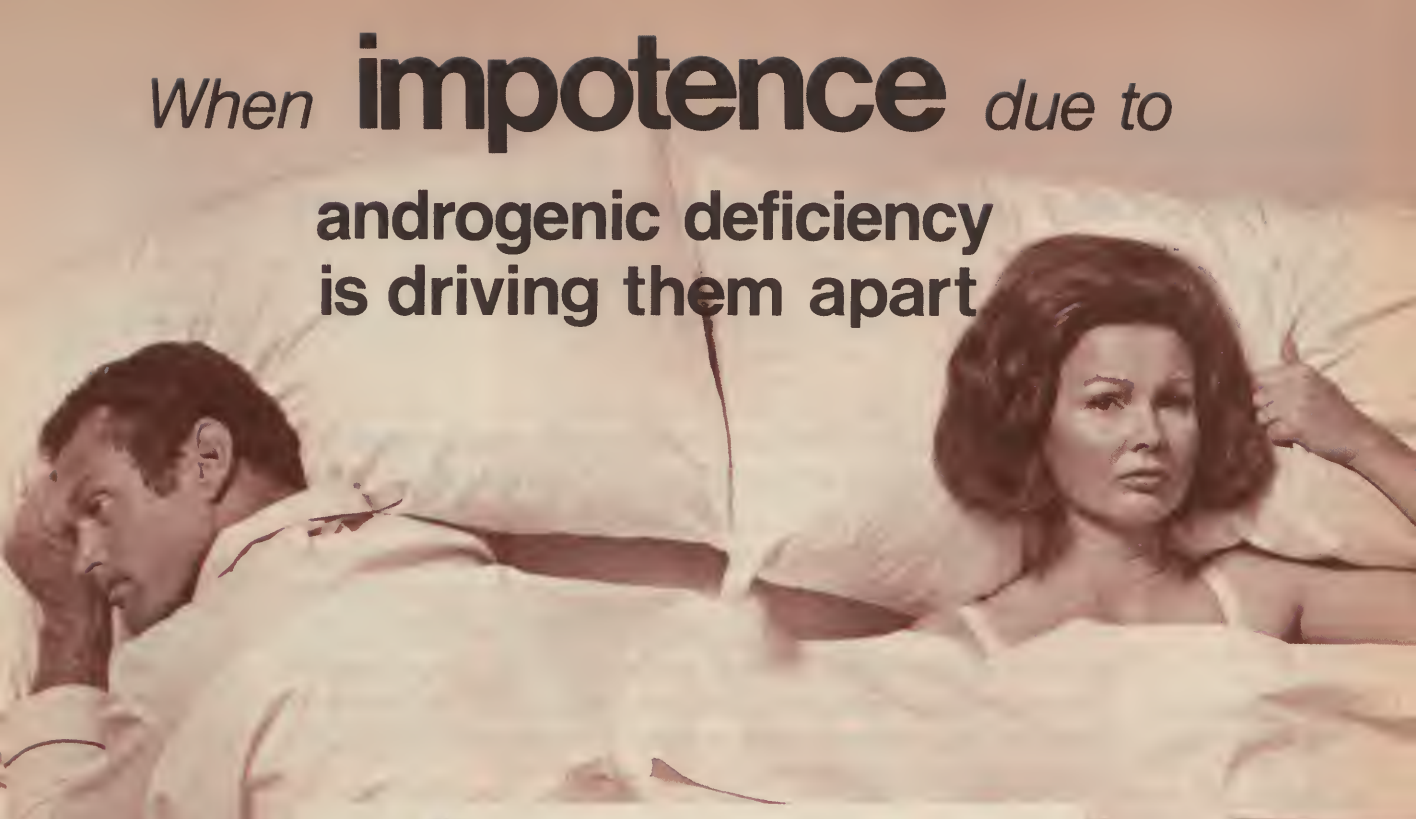
When impotence due to androgenic deficiency is driving them apart



Android®-5 Buccal Tabs

Android®-10 Oral Tabs

Android®-25 Oral Tabs

Methyltestosterone U.S.P. – 5, 10, 25 mg.

New Double-Blind Study ANDROID-25 *vs.* Placebo*

* **WRITE FOR REPRINT:** R. B. Greenblatt, M.D.; R. Witherington, M.D.; I. B. Sipahioglu, M.D.: Hormones for Improved Sexuality in the Male and Female Climacteric. *Drug Therapy*, Sept. 1976.

Is there a true aphrodisiac? How effective are androgens in the management of the male climacteric and male impotence? Article discusses the psychophysiological and hormonal changes in the elderly male and female and therapeutic considerations. The effectiveness of methyltestosterone in the management of male impotence was confirmed by a cross-over, double-blind study using a placebo and Android-25 (methyltestosterone 25 mg.), on 20 males, 50 years of age or older who complained of secondary impotence. Patients received a series of placebo then Android-25, or Android-25 then placebo as follows: 1 tablet/30 days; 2 tablets/30 days; 3 tablets/30 days. Sexual response was evaluated: 0 = no change; + = 25% improvement; ++ = 50% improvement; +++ = 75% improvement. Placebo effectiveness was + or ++ in 12.7% of trials. Android-25 elicited a +, ++ or +++ response in 47.2% of trials. There was often a dose related response not observed with the placebo. This effect was not observed in younger patients (age 28-45 years).

DESCRIPTION: Methyltestosterone is 17β-Hydroxy-17-Methylandrost-4-en-3-one. **ACTIONS:** Methyltestosterone is an oil soluble androgenic hormone. **INDICATIONS:** In the male: 1. Eunuchoidism and eunichism. 2. Male climacteric symptoms when these are secondary to androgen deficiency. 3. Impotence due to androgenic deficiency. 4. Post-puberal cryptochidism with evidence of hypogonadism. Cholestatic hepatitis with jaundice and altered liver function tests, such as increased BSP retention, and rises in SGOT levels, have been reported after Methyltestosterone. These changes appear to be related to dosage of the drug. Therefore, in the presence of any changes in liver function tests, drug should be discontinued. **PRECAUTIONS:** Prolonged dosage of androgen may result in sodium and fluid retention. This may present a problem, especially in patients with compromised cardiac reserve or renal disease. In treating males for symptoms of climacteric, avoid stimulation to the point of increasing the nervous, mental, and physical activities beyond the patient's cardiovascular capacity. **CONTRAINDICATIONS:** Contraindicated in persons with known or suspected carcinoma of the prostate and in carcinoma of the male breast. Contraindicated in the presence of severe liver damage. **WARNINGS:** If priapism or other signs of excessive sexual stimulation develop, discontinue therapy. In the male, prolonged administration or excessive dosage may cause inhibition of testicular function, with resultant oligospermia and decrease in ejaculatory volume. Use cautiously in young boys to avoid premature epiphyseal closure or precocious sexual development. Hypersensitivity and gynecomastia may occur rarely. PBI may be decreased in patients taking androgens. Hypercalcemia may occur, particularly during therapy for metastatic breast carcinoma. If this occurs, the drug should be discontinued. **ADVERSE REACTIONS:** Cholestatic jaundice • Oligospermia and decreased ejaculatory volume • Hypercalcemia particularly in patients with metastatic breast carcinoma. This usually indicates progression of bone metastases • Sodium and water retention • Priapism • Virilization in female patients • Hypersensitivity and gynecomastia. **DOSAGE AND ADMINISTRATION:** Dosage must be strictly individualized, as patients vary widely in requirements. Daily requirements are best administered in divided doses. The following is suggested as an average daily dosage guide. In the male: Eunuchoidism and eunuchism, 10 to 40 mg.; Male climacteric symptoms and impotence due to androgen deficiency, 10 to 40 mg.; Postpuberal cryptorchism, 30 mg. **REFERENCE: Robert B. Greenblatt, M.D., and D. H. Perez, M.D.:** "The Menopausal Syndrome," *Problems of Libido in the Elderly*, pp. 95-101. Medcom Press, N.Y., 1974. **HOW SUPPLIED:** 5, 10, 25 mg. in bottles of 60, 250. Rx only.

Office counseling

Patients may need basic sex education even today

JOYCE D. KALES, M.D.
TJIAUW-LING TAN, M.D.
ENOS D. MARTIN, M.D.
Hershey

This article is the first in a series coordinated by members of the departments of psychiatry of Pennsylvania's medical schools. The series is intended to help physicians in general practice to assess and manage the emotional needs of their patients. The first three articles constitute a miniseries on human sexuality. In the first article, Dr. Kales and associates provide a checklist for the physician whose patient requires basic sex education. Subsequent articles will discuss the sexual history and male and female sexual dysfunctions.

Despite society's increasing openness about sexuality and sexual functioning, many individuals are not exposed to proper sexual education. The practicing physician may help to educate individuals and couples in a personalized and comprehensive way concerning the development of their potential as sexual human beings, and thus encourage them to express their natural sexual needs in healthy and acceptable ways. It is the physician who cares for patients at those critical phases of the life cycle (puberty, marriage, pregnancy, menopause, and geriatric periods) that are tied to the ebb and flow of reproductive and sexual functioning.

Thus, the physician is in an optimal position to provide sexual education tailored to the specific needs of his patients. Instructional aids such as pamphlets, books with diagrams, films, and videotape cassettes are available to provide anatomic and physiologic information, clarify various misconceptions, and encourage healthy and appropriate sexual attitudes. Table I gives a list of suggested materials for use by the physician in office counseling.

A checklist of basic information for the physician's use in his role as counselor follows.

Sexual Response

The human sexual response cycle may be divided into four phases:

Excitement—Erection of the penis in the male and lubrication and swelling of the vagina and labia of the female occur in response to visual, tactile and olfactory stimuli, and to erotic thoughts and fantasies.

Plateau—Continued stimulation results in increased size of the testicles and breasts, increased muscular tension, and the so-called "orgasmic platform," which is due to swelling of the vagina. The "sex flush," a measles-like rash over the face and upper chest (blush area) and trunk, occurs during this phase in men and women.

Orgasm—This phase is characterized by seminal emission and ejaculation in the male and cervical and uterine contractions in the female. Both responses are accompanied by intense pleasure. Heart rate and respiration are increased.

Dr. Kales is director of the division of community and social psychiatry and of the sex education program and sexual dysfunctions clinic of the department of psychiatry of The Milton S. Hershey Medical Center. Drs. Tan and Martin are associates in the department of psychiatry at Hershey.

Resolution—In the male, erection subsides and a refractory period ensues, lasting from minutes to hours, during which erection and ejaculation cannot occur. Females do not have such invariable refractory periods; some women may be stimulated to successive orgasms.

Studies have shown that when only one to ten minutes of foreplay are involved, 40 percent of the women interviewed report they "nearly always" reach orgasm; 50 percent do so when foreplay extends for 15 or 20 minutes, and 60 percent when it is longer. When intromission lasts less than a minute before ejaculation, only about 25 percent of women achieve orgasm; about 50 percent do so when intromission lasts from 1 to 11 minutes, and about 65 percent do so when it lasts longer than 11 minutes.

Coital positions—Variety in coital positions makes sexual activity more enjoyable and prevents it from becoming routine and predictable. The most common position, often considered the "normal" or "missionary" position, is the face-to-face, man-above position. Other common positions include the man supine, woman atop, which allows the woman a chance to

express herself and govern clitoral contact as well as control the tempo of movement and the depth of penetration; the face-to-face, side position, which allows maximum contact between the man's body and the woman's clitoris and offers the advantage of neither partner supporting the other's weight; rear entry, which can be accomplished with the woman kneeling or lying on her stomach or the man sitting on a bed or chair while the woman sits on his lap with her back to him; and standing or sitting face to face.

When various sexual practices are desired by one partner and considered "abnormal" by the other partner, the physician may be asked to be the arbiter of such disputes. Acts such as mutual manual stimulation and different coital positions are normal. Adding variety to the sex life of a couple is entirely healthy. However, sadistic or masochistic practices or other activities too roughly pursued, such as blowing air into the vagina, could lead to pain and permanent psychological or physical harm. It is also advisable to warn against the possibility of vaginitis resulting from anal sex followed by vaginal intercourse without proper cleansing.

A form of sexual activity that is more popular than many realize is oral-genital stimulation. Kinsey reported that oral-genital contact was experienced by 60 percent of couples who were college educated. Some individuals have a very negative attitude toward genital kissing because they consider the genital region to be "dirty." The proximity of the genitals to the anus and urethra gives rise to the concept of uncleanliness, but when the region is properly cleansed to remove smegma and other genital secretions, the "unclean" objection to oral-genital contact is no longer valid.

Frequency of marital coitus—In a recent study of middle class couples in their late 30s whose marriages averaged 14 years in length, the average husband desired intercourse nine times per month. The husbands reported that the actual frequency was seven times per month (25 percent below preference), while the wives reported that the actual frequency was eight times per month, the same as their preference. In another study, 45 percent of males between 20 and 29 years old had intercourse three to four times per week; this figure declines to 1 percent of men between 60 and 69.

Sex drive—The strength of libido, or sex drive, in the male and female is determined by androgenic hormones, which are derived from the testes and adrenals in the male and from the adrenals in the female. Psychological factors determine the aim or object of the sex drive, although constitutional factors may also play an important role in certain sexual behaviors, for example in homosexuality and transsexualism.

Attitudes toward sex are learned both from the family, beginning with the early mother-infant relationship, and the culture. The deprivation of parental warmth, acceptance, and affection in childhood may result in ungratifying promiscuity representing a search for the fulfillment of needs, or the inability to find lasting sexual satisfaction with a loved and loving partner. The culture, too, imposes its own frequently conflicting values regarding sexual ethics, which shape individual sexual attitudes and behavior.

On a conscious or deeper, unconscious level, feelings of inadequacy and inferiority toward one's self and one's own body will result in fears of rejection, withdrawal from sexual opportunity, and difficulty with sexual responsiveness. A positive self esteem and high level of confidence will enhance sexuality. Sexuality can also be adversely affected by fears of bodily harm in women, or the counterpart, castration anxiety in men, or discomfort with closeness and intimacy, or fears of losing control and being dominated. The emotions of guilt, shame, anger, depression, or anxiety may result in low levels of drive and responsivity.

Myths and Misunderstandings

Misconceptions about sexual function and sexual anatomy and feelings of physical inadequacy and inferiority are common.

Penis size—Men, especially in adolescence, often have concern over the size of the penis. Masters and Johnson indicate a range of 7 to 11 cm in the flaccid state and 14 to 18 cm in the erect state. The flaccid dimension

TABLE I
Selected Materials on Sexuality and Sex Education

Books for Physicians

Human sexuality: a health practitioner's text, edited by Richard Green, M.D., The Williams & Wilkins Company, Baltimore, 1975.

Medical aspects of human sexuality: 750 questions answered by 500 authorities, compiled and with a forward by Harold I. Lief, M.D., The Williams & Wilkins Company, Baltimore, 1975.

The sexual experience, edited by Benjamin J. Sadock, M.D., Harold I. Kaplan, M.D., and Alfred M. Freedman, M.D., The Williams & Wilkins Company, Baltimore, 1975.

Instructional Materials for Lay Persons and Health Personnel

About your sexuality, prepared by Derzck D. Calderwood. Beacon Press, Boston, 1971. Multimedia kit and guide published by the Unitarian Church.

Human sexuality, 2nd edition, James L. McCary, Van Nostrand Reinhold Company, 1973.

Siecus Study Guides (series of 14), Sex Information and Education Council of the US, Behavioral Publications, New York, 1974.

Audiovisual Aids

Sexually mature, John Wiley & Sons, Inc., 605 Third Ave., New York 10016. *Graphic and tasteful. Covers sexual anatomy, physiology, sexual response cycle, and changes with age.*

Human sexuality, its anatomy, physiology and psychology, Paul R. Miller, M.D., The Williams & Wilkins Company, 428 East Preston St., Baltimore 21202. *Presents three major aspects of the subject: basic facts about the sexual processes of the body (slides of filmstrip plus audio cassette tape); heterosexual intercourse (16 mm film or super 8 cartridge); and manual stimulation (16 mm film or super 8 cartridge).*

Sexual anatomy and physiology, male and female, Focus International, Inc., 505 West End Ave., New York 10024. *Three sound filmstrips and three cassettes plus discussion guide. A comprehensive factual review for lay and health care and professional groups.*

bears little relation to the erect dimension: the smaller penis erects to a proportionally greater size than does the larger penis and is equally capable of providing sexual satisfaction to the female. Masters and Johnson found no difference in the tactile threshold between the circumcised penis and the uncircumcised penis. Intravaginally, the prepuce of the uncircumcized penis remains retracted behind the glans during penile thrusting, dispelling the myth that premature ejaculation may be more common in uncircumcised men.

Breast size—Women are frequently concerned about the size of their breasts. A discrepancy in size between the two breasts is common. The degree of sexual satisfaction or ability to respond, including the erotic sensitivity of the nipples and surrounding tissues, is not dependent upon breast size or shape.

The hymen—The hymen is highly significant in almost all cultures, with the intact hymen often prized as a symbol of virginity. The hymen varies in its rigidity or elasticity, and number and size of perforations. Women should be reassured that virginity is intact when tampons are utilized for menstrual protection, or when the hymen is gently stretched manually in preparation for coitus.

The clitoris—The clitoris is the counterpart of the penis, and it similarly becomes engorged with blood during sexual stimulation. It is the triggering site of the female orgasm. Some men are unsure of the location of the clitoris because it becomes elevated and retracted during sexual excitement. They also may believe that a woman likes direct, vigorous, digital stimulation of the tip of the clitoris, whereas most women prefer gentle, manual stimulation in the general area of the clitoris in a "teasing" manner—perhaps first stroking the vaginal orifice lightly until lubrication is felt. The male's moist fingers when stroking the vagina to the side and around the clitoral area provide a heightened level of stimulation to the female partner. Women should be encouraged to guide the male partner to their preferences rather than expecting expertise and automatic knowledge of their individual response.

Menopause—With the onset of middle age, the female undergoes menopause. Many women are apprehensive about the menopause fearing that they may become emotionally unstable and experience marked physical discomforts. Libido may decrease when the woman feels that the cessation of ovarian activity and the "change" represents an end to her sexual and reproductive life. Sexual drive may increase as the woman is freed from the prospect of unwanted pregnancy and the burden of contraception. There is increased production of androgens associated with menopause, and this theoretically raises libido.

Menopause induced by hysterectomy should not interfere with normal sexual relations if the woman has had satisfactory sex relations before the operation. If both ovaries have been removed at the time of surgery, estrogen replacement therapy is necessary to maintain the normal vaginal epithelium and prevent the occurrence of senile vaginitis.

Education and preparation of the couple for the changes associated with natural or induced menopause will prevent undue anxiety over the menopause and encourage continued closeness and intimacy. Women should be reassured that the couple's sex life can improve as more freedom from the responsibilities of child care increases the time to plan for and enjoy sexual activities together.

Special Situations

Sexual counseling in special situations is not only therapeutic but also serves prophylactically to prevent subsequent sexual dysfunctions.

Pregnancy—Advice regarding coitus during pregnancy should neither be uniformly restrictive nor excessively liberal. In the uncomplicated pregnancy, full sexual expression should be encouraged, with reassurance that this will not harm the baby. Couples should recognize the female libido in pregnancy normally undergoes noticeable fluctuation with each trimester. As the pregnancy progresses, alternate positions should be used to obtain maximum comfort.

If there is a wound of the vagina, cervix, or uterus, incompetent cervix, ruptured membranes, or history of habitual abortion, three potential hazards of coitus are mechanical injury from the penis, introduction of infection, and inducement of uterine contractions. Instructions should be tailored to the specific situation, and alternative sexual activity, such as petting and manual stimulation, should be encouraged whenever coitus is contraindicated for medical reasons.

Geriatric period—The elderly person retains a need and potential for affectional expression, even though it is quite common to think of the elderly as asexual or inappropriately lewd if they acknowledge interest in sex. Individuals who have been sexually active in their younger years will retain sexual interest when they are old; conversely, those who had a low level of interest and activity in their younger years will have even less interest as they age. There is evidence that elderly patients will be pleased rather than offended with tactful questioning by the physician regarding their erotic interest, sexual opportunities, and sexual problems.

Special conditions in the elderly female, such as atropic vaginitis due to thinning and absence of lubrication of the vaginal mucosa, may be alleviated by local application of estrogen cream to the vagina. Vaginal dilators may be used to restore accommodation when sexual activity is contemplated after a period of abstinence.

In the middle-aged and elderly male, the erection process gradually slows. Erection may be sustained much longer before ejaculation, however, thus producing greater satisfaction for the female partner. The refractory period of the elderly male lengthens up to days or weeks and coital frequency is typically reduced, but the capacity is maintained indefinitely in the absence of debilitating illness.

Morning coitus timed to take advantage of early morning erections may result in a more satisfying experience for the couple. This suggestion may also be helpful for the middle-aged male who complains of some loss of erectile capacity due to the effects of diabetes or certain drugs. In the elderly male after prostatectomy, reflux ejaculation into the bladder occurs about 80 percent of the time, but the operation itself should not render the patient impotent or change the sensation of orgasm. □

MDs in the news

Harold G. Scheie, M.D., founding director of the five year old Scheie Eye Institute in Philadelphia, recently resigned his title of director of the University of Pennsylvania affiliate. He will continue in practice at the institute and has been appointed Emeritus William E. Norris and George D. DeSchweinitz Professor of Ophthalmology at the university. A nationwide search for a successor for Dr. Scheie has resulted in the naming of **Myron Yanoff, M.D.,** as director of the institute and head of the ophthalmology departments at the University of Pennsylvania School of Medicine and the Presbyterian Medical Center. Dr. Yanoff is also a professor of pathology at the university.

The staff of Allentown Hospital was recently joined by two new pathologists. **Alexander Nedwich, M.D.,** a former associate pathologist at the Allentown and Sacred Heart Hospital Center, has become chief pathologist and director of laboratories at the hospital. **Proctor L. Child, M.D.,** will serve as an associate pathologist on the Allentown Hospital staff.

John L. Ginsberg, M.D., was recently named medical director of the White Deer Run Treatment and Rehabilitation Center for the addicted, Allenwood. Dr. Ginsberg, who received his medical degree from Temple University School of Medicine, is on the family practice medical staff of Evangelical Community Hospital, Lewisburg.

Carl T. Brighton, M.D., Malvern, was recently named chairman of the department of orthopedic surgery and the Paul B. Magnuson professor of bone and joint surgery at the University of Pennsylvania School of Medicine. Dr. Brighton is chief of orthopedic surgery at the Hospital of the University of Pennsylvania, a consultant in orthopedic surgery at the Philadelphia Naval Hospital, and an attending staff physician at Children's Hospital and the Philadelphia Veterans Administration Hospital.

Geisinger Medical Center, Danville, recently announced the following staff appointments: **Ronald L. Kabler, M.D.,** associate in the department of urology; **Howard G. Hughes, M.D.,** associate in the department of emergency medicine; **Richard H. Driscoll, Jr., M.D.,** associate in the department of gastroenterology; **David R. Gutknecht, M.D.,** associate in the department of general internal medicine; **Gurijala N. Reddy, M.D.,** associate in the department of radiation medicine; **Donald P. Monsaert, M.D.,** and **Ralph H. Starkey, M.D.,** associates in the department of endocrinology and metabolism; and **Gary R. Plotkin, M.D.,** associate in the department of allergy, immunology, and infectious diseases.

Two physicians have recently been appointed to the staff of Mercy Hospital, Scranton. **Charles M. Haas, M.D.,** will serve as an associate pathologist and **Paul Metzger, M.D.,** will join the staff as a full time physician in the emergency room.

A Thomas Jefferson University professor reports that male infertility problems can be corrected with a drug normally prescribed for women to induce ovulation. In his study, Jerome Check, M.D., found that nine of ten men selected for treatment with clomiphene citrate impregnated their wives within seven months of beginning to take the medication. Dr. Check, instructor in obstetrics and gynecology and assistant professor of medicine at Jefferson Medical College, has been treating men with the medication, which is often given to women when the cause of their inability to ovulate is unknown, for the past two years. "Today, one couple of every five or six in the general population is infertile and roughly 40 percent of the time the problem is with the male. About half of these men can be improved with clomiphene citrate," Dr. Check says.

Jeffrey Weiner, M.D., Meadowbrook, has been appointed associate medical director of the Health Maintenance Organization of Pennsylvania. Dr. Weiner will be directly responsible for the development of utilization programs and computerized techniques. He is a member of the Montgomery County Medical Society, the Pennsylvania Medical Society Advisory Committee on Family Practice, and the American Medical Association, and a charter member of the American Academy of Family Practice.

The following physicians were recently elected to fellowship in specialty organizations: **Frederick J. Munson, M.D.,** Allentown, fellow of the American College of Radiology; **Henry K. Sagel, M.D.,** York, and **Ook Jai Lee, M.D.,** Coraopolis, fellows of the American College of Obstetricians and Gynecologists; **Joseph E. Pirog, M.D.,** Altoona, fellow of the American College of Pathologists; **Bhupinder K. Varma, M.D.,** Hershey, fellow of the American Academy of Pediatrics; **Paul S. Friedman, M.D.,** Philadelphia, distinguished fellow of the American College of Nuclear Medicine; **Burton Mass, M.D.,** Elkins Park, fellow of the American College of Chest Disease; and **Sheila Brown, M.D.,** Bethlehem, fellow of the American College of Anesthesiologists.

Recently certified in their various specialties are the following physicians: **Feizel Zavahir, M.D.,** Altoona, in pediatrics; **Jeffrey D. Hare, M.D.,** Bethlehem, in occupational medicine; **Brendan O'Brien, M.D.,** Allentown, in surgery and orthopedics; **Usha D. Singh, M.D.,** Latrobe, in pathology; and **Jay Soo Jung, M.D.,** Allentown, in anesthesiology.

Neil I. H. Park, M.D., was elected recently to fellowship in the American College of Obstetricians and Gynecologists. Dr. Park is associated with the Windber Hospital and Wheeling Clinic.

MDs in the news

Richard H. Gross, M.D., a general and thoracic surgeon, has been appointed to the board of directors of Paoli Memorial Hospital. Dr. Gross is assistant professor of surgery at Hahnemann Medical College. He is a fellow of the American College of Surgeons and the Philadelphia Academy of Surgeons and he is a member of the board of directors of the American Cancer Society of Chester County.

Jan Schneider, M.D., has been appointed professor and chairman of the department of obstetrics and gynecology at the Medical College of Pennsylvania effective January 1, 1978, according to **Robert E. Cooke, M.D.,** president of the college. Dr. Schneider, a graduate of the London Hospital Medical College of the University of London, England, and the recipient of a master's degree in public health from the University of Michigan, will be leaving his posts as professor of obstetrics and gynecology at the University of Michigan Medical School and professor of maternal and child health in the School of Public Health.

DR. SCHNEIDER

DR. SCHUMACHER

L. Richard Schumacher, M.D., was recently appointed director of ambulatory care and director of medical care evaluation at York Hospital. He will also serve as associate director of medical education. In his new position, Dr. Schumacher will be responsible for the supervision and coordination of the out-patient clinics and the medical care evaluation programs and he will assist in the supervision of the physician education programs. Dr. Schumacher was most recently chief of medicine at the Doylestown Hospital.

Thomas P. Foley, M.D., was recently promoted to associate professor of pediatrics at the University Health Center of Pittsburgh. Dr. Foley is a member of the University of Pittsburgh School of Medicine faculty and director of the clinical research center of Children's Hospital of Pittsburgh.

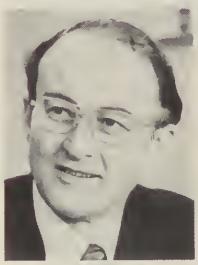
Two physicians were recently certified as diplomates in their respective specialties: **Thomas F. Bednarek, M.D.,** Kingston, was designated a diplomate of the American Board of Radiology; and **William S. Gordon, M.D.,** Harrisburg, was recertified by the American Board of Family Practice.

Howard G. Hughes, M.D., and **Michael J. Leicht, M.D.,** have received appointments as associates in the department of emergency medicine at Geisinger Medical Center. The physicians will teach, work with the Susquehanna Poison Center, and administer to emergency patients. Dr. Hughes, a graduate of Wilkes College with a master's degree from Pennsylvania State University, received his medical degree from Jefferson Medical College. Dr. Leicht was graduated from Drexel University and Temple University School of Medicine.

David G. Ansel, M.D., has been named director of the section of ear, nose, and throat at the Daroff Division, Albert Einstein Medical Center, Philadelphia. Dr. Ansel received his medical degree from Yale Medical School and did post-graduate work at Johns Hopkins Hospital, Baltimore, and Barnes Hospital, St. Louis. He recently completed two years of service at the Philadelphia Naval Hospital.

The board of trustees of Westmoreland Hospital recently announced the appointment of **Hugh E. Chavern, M.D.,** as director of the Community Mental Health Center. Dr. Chavern is a clinical assistant professor of psychiatry at the University of Pittsburgh School of Medicine and psychiatric consultant to the Veterans Administration.

Lewis W. Bluemle, Jr., M.D., was recently inaugurated president of Thomas Jefferson University. Dr. Bluemle, of Williamsport, was formerly president of the University of Oregon Health Sciences Center, Portland, and president of the State University of New York's Upstate Medical Center at Syracuse. He is recognized as an authority in the field of liver and kidney diseases and was one of the pioneers in the development of artificial kidneys.



DR. BLUEMLE

DR. MULHOLLAND

S. Grant Mulholland, M.D., noted urologist, epidemiologist and surgeon, has been appointed Nathan Hatfield Professor of Urology and chairman of the department at Thomas Jefferson University. Dr. Mulholland has been an assistant and associate professor of urology at the University of Pennsylvania School of Medicine since 1970. He is an assistant urologist at Penn's Graduate Hospital, an assistant surgeon at Children's Hospital, a consultant to the Veterans Administration Hospital in Philadelphia, and a member of the department of urology of the Hospital of the University of Pennsylvania. Dr. Mulholland is best known among his colleagues for his clinical and research endeavors in the field of infection.

Robert W. Leipold, M.D., director of the department of family medicine at Geisinger Medical Center, was recently elected vice president of the Pennsylvania Primary Health Care Association. The organization is composed of primary health care centers and other institutions interested in primary care throughout the state.

practice management

Take time to agree on details when forming group

LEIF C. BECK, LL.B.
VASILIOS J. KALOGREDIS, J.D.
Bala Cynwyd

. . . physicians entering into a joint practice must take the time to explore and agree upon the details that will govern their relationship.'

In two recent articles we set forth some primary considerations for physicians contemplating the establishment of an effective group practice. The first article dealt with division of income alternatives. The second examined philosophies of practice, incorporation versus partnership, and practice income and expenses.

Other matters of importance to be considered by doctors contemplating practicing together will be described in detail in this article. After all items have been resolved, they should be reduced to a formal written agreement. If the physicians decide to remain unincorporated, a partnership agreement must be signed; if incorporation is chosen, employment and buy-sell agreements are necessary.

Advisors with experience in dealing with professionals are often helpful in guiding physicians through the types of questions raised in these articles. We must stress, however, that only the physicians involved can make the final decision about what is best for them, for only they understand their individual and joint purposes, philosophies, practices, and personalities.

Initial capital contributions

When a group practice is established through the merger of existing practices, each physician has certain equipment, furniture, and other assets to contribute to the new practice. The dollar values of each doctor's asset contributions are usually unequal. This raises a question of fairness among the parties. In addition, the new venture requires an influx of cash, both to purchase newly required assets and quite often to meet expenses for the first couple of months.

In a partnership situation, it is often desirable to credit each partner's "capital account" with the value of the assets he is contributing. Generally, it is sufficient to credit them at "book value"—the original cost minus depreciation. When one physician has accelerated his depreciation for tax advantage far ahead of the other doctor or doctors, we often recommend that the capital accounts be based on what would have been the book values had each partner previously depreciated his assets on a "straight line" method. This may entail a depreciation over a longer than normal tax term.

In a partnership, these capital accounts are treated as permanent reflections of each partner's initial contributions to the practice. They are not likely to be paid over to a partner in cash or other assets unless and until he leaves the group practice. At that time, he is entitled to a payment equal to his capital account balance as of the date of leaving.

Such a treatment is generally fair as long as each partner has reasonably contributed approximately the same dollar amount. In situations in which one or more of the physicians has contributed substantially larger values of assets, he should be reimbursed for his contribution. Several approaches can be taken to see that he is made whole. His share of income may be increased to recognize that some income comes from the use of these assets and particularly from the freedom from having to otherwise lease the assets. Another approach is to have the physician lease the assets to the group practice. The assets are no longer contributions; the doctor retains ownership and the group pays rent for the assets.

In other situations, it is best to strive for equalization among the partners, even if this entails a cash payment from one partner to another so that the capital accounts begin on an equal plane. This often occurs when a senior doctor takes on a young physician who does not have assets to contribute to the practice. This is also the fairest approach in most corporate situations in which it is often preferable for each physician to have an equal percentage of the corporate stock. A disparity may best be made up with cash payment.

Cash flow is often tight during the first few months of a new practice. Much depends on the treatment of accounts receivable from prior practices. As cash is required, however, it is best for the partners to contribute in the same ratio in which they plan to divide income. We believe that physicians should seek to keep cash contributions to a minimum. If any must be made, it is best to repay them as soon as the practice begins to produce cash. It is often better to borrow some of the cash and pay it back quickly rather than

The authors are the principle consultants of Management Consulting for Professionals, Inc., Bala Cynwyd.

have the physicians put out-of-pocket money into the practice. Physicians should practice medicine with minimum direct investments (except for extreme situations, such as radiology, in which large asset purchases may be required). Because physicians derive their incomes from services and not from capital investments, they should not tie up too much money in the practice.

'. . . physicians should seek to keep cash contributions to a minimum. If any must be made, it is best to repay them as soon as the practice begins to produce cash.'

Accounts receivable

The proper handling of patient accounts receivable often causes difficulty in a group practice situation. Two problems frequently arise. How should the receivables generated by a physician's work *before* he joined the venture be handled? How should he share in the group's receivables if he *leaves* the group practice?

When doctors merge several existing practices, they may decide to hold back and collect the receivables independently of the new venture. The philosophy behind this approach is that these items represent potential payments for services previously provided and, since the services do not flow from the group practice, neither should the income inure to it. In such situations, the new venture may continue to bill the old patients as a convenience to each physician, separately crediting the receipts to the doctors' personal accounts.

When one or more physicians join a single continuing practice, it is more common for the practice to continue receiving the payments as if there had been no interruption. When an unincorporated practice merges with a corporate practice, with the corporation to survive, it is often advisable for the physician who was incorporated prior to the merger to receive additional salaries to reflect the receivables owed to the corporation for pre-merger work. The unincorporated physician collects his pre-merger receivables outside the corporation.

An advantage of having receivables flow into the joint practice is that the money helps to meet initial cash flow needs. In such a case, the partners who performed the work that generated the receivables deserve an income advantage. The "new partners" will often buy into the receivables by accepting a lower share of income for a period of time.

Another major concern with receivables arises when a partner leaves the group practice because of death, permanent disability, retirement, or other reasons.

Generally, a partner should be entitled to his proportionate share of the group's receivables when he leaves the group. This share should, of course, be reduced for the uncertainties and costs of collection. A departing partner's share is often reduced by 10 or 15 percent to reflect these factors. Quite often a partner's "separation entitlement" will be stated in terms of a certain number of months continued income (much of it tied to accounts receivable). In such a case, a specific percentage share of the group's accounts receivable are not taken into account, although the amount of continued income from the practice includes this as a factor.

'An advantage of having receivables flow into the joint practice is that the money helps to meet initial cash flow needs. . . . the partners who performed the work that generated the receivables deserve an income advantage.'

Care should be taken that the partner who leaves is not paid out of receivables long before the continuing partners have actually collected the income. This requires a close analysis of the practice's collection experience. If much of the potential income is in litigation (as may be the case for orthopedic surgeons or radiologists), then the period for paying a departing partner might best be longer than for a family practitioner.

These typical arrangements for a partnership require a certain degree of accurate bookkeeping. We are amazed at the number of group practice members who are unaware of their collection ratios, their accounts receivable outstanding, and other basic management information. All practices should have this data. Of particular importance is a working definition of accounts receivable. A practice should maintain a steady program and set policy of writing off "dead accounts" so that partners remaining in a group are not strapped with large payments for uncollectible accounts.

When a practice is dissolved and no doctor maintains it, physicians customarily split the receivables as they come rather than one partner "buying" the receivables from the other.

Vacations and illnesses

Any agreement among physicians should state how much vacation and meeting time absence each is entitled to in a given year. This should be included in a partnership agreement or working rules in a partnership setup or in a physician's employment contract in a corporation.

The amount of vacation time taken by group members must depend on how well the remaining doctors can handle the burden during any such absences. A primary reason for joint practice is the opportunity to stagger working schedules and allow such absences. Most group practices can easily accommodate as few as four and as many as eight weeks of vacation per year per member.

Another real advantage of group practice is the security provided in case of absence due to illness or disability. We encourage practices to provide as much absence time as possible without disrupting the remaining partners' ability to handle the practice.

The amount of time given to receive continued income should be tied to the accounts receivable experience and to a determination of a reasonable amount of time for the remaining physicians to bear the burden without seeking additional help. To cut off a disabled partner from his income share earlier than that would deprive him of a strong advantage of group practice. If the income share continues

for too long, however, the "healthy" partners are unduly penalized.

Several months of normal income share, followed by a smaller share of income as the absence continues, is often a fair solution. For example, a practice may provide two months of full income and four months of half income if the illness continues. This system recognizes that the effect on the remaining partners is gradual (because of accounts receivable, ability to work a little harder for a short period of time, and the like) and that the cost of hiring a replacement (if one is available) would be less than the sick man's full income share.

In other cases, after providing for perhaps two or three months of full income, an agreement may call for additional income to the disabled partner if it is available after paying practice expenses and the normal income shares for the healthy partners. This can work well. It protects the healthy partners from taking a cut in income while providing the disabled partner some income from the practice.

If a partner's absence continues beyond the allowable period (often six to twelve months) his sharing of income often ceases and he becomes an inactive partner. We generally recommend that he be allowed the opportunity to return to the partnership if he recovers during some extended period (perhaps one or two years). If he cannot return to active practice during that period, then his relationship with the partnership should be terminated. The group cannot, in all fairness, keep a place open for him indefinitely. It must recognize the uncertainty of his return and subsequent productiveness and also be provided the opportunity to seek a replacement within a reasonable amount of time.

It is advisable to provide for these contingencies prior to the event. To wait until something like this happens can only result in hard feelings and embarrassment.

Retirement, death, and withdrawal

A group's formal agreement should specifically set forth what a person is entitled to if he leaves the practice for any reason. This entitlement usually includes: a return of his capital (in a corporation, the stock price); his share of income until the date of termination; and his share of accounts receivable (which may be tied to some sort of salary continuation).

Very few medical practices have any greater value. Good will is a factor in very few medical practice situations. Proof of this is seen in various legal and tax decisions and in the practical inability to sell medical practices. Most medical practices have value only to the extent that the physician actually and personally provides the services. There is little income continuation value in the patient charts, the medical practice's name, and the like in the majority of situations.

'(A) . . . real advantage of group practice is the security provided in case of absence due to illness or disability. . . . practices (should) provide as much absence time as possible without disrupting the remaining partners' ability to handle the practice.'

In light of this, we strongly disagree with the insurance salesmen's efforts to suggest a higher price value in order to get professionals to buy life insurance for a larger payout. This additional value, funded by life insurance, is often little more than a bootstrap argument having no relation to reality. We believe that each partner should buy whatever life insurance he needs or wants personally, without being tied to the partnership or to his associates.

Rights of the senior doctor

When a senior physician takes on a younger doctor (often with no private practice experience) it is necessary to set forth some protection for the senior physician. It is not unusual, for example, for the senior physician to have the right to treat the junior physician as if he had terminated the relationship if there is a separation at any time within the first five years of the association. This permits the senior doctor to retain the office and phone number, have first pick of employees, keep the practice name, and the like. Because the senior man has developed the practice, the resolution is generally agreeable and fair to both parties. After the initial five year period, both physicians have contributed substantially to the growth of the practice and the senior physician is no longer entitled to this benefit.

We generally do not recommend that non-competition clauses be inserted in employment or partnership agreements. The clauses are often of questionable legal validity and do not seem appropriate in the majority of medical practice situations. There are circumstances, however, in which it is reasonable to provide some protection for a senior physician. For example, in proper situations a senior physician's agreement with a new doctor might include a provision by which the young doctor agrees to resign from the staffs of the hospitals being served by the practice upon termination of the agreement. If such resignation is not forthcoming, the younger physician must pay a substantial dollar penalty to the senior doctor. This does not preclude the young physician from practicing where he desires, but does provide that he should pay the senior physician for this right. This provision is not common, but it is used and relevant in unique situations in which there may be a limited need for a particular type of specialist in an area.

We hope these thoughts prove helpful to doctors who are considering establishing a group practice and to those already practicing in that form. It should be remembered that physicians entering into a joint practice must take the time to explore and agree upon the details that will govern their relationship. Many physicians now practicing in groups should take the time to do this, particularly if it was not done at the beginning of the relationship. Even though these considerations begin on a friendly and often casual basis, it is most important that written documents be prepared to reflect the understandings of the partners. The written document is often needed when the parties involved are not on such friendly terms. The use of competent and expert legal assistance in this area can be most helpful. □

PHYSICIANS WANTED

Internist—Rural area, close to interstates. Excellent hunting, fishing, summer and winter sports. Southwestern Pennsylvania. Fifty-three bed fully accredited hospital, 12 active staff members. Financial inducement available. Contact James M. Brown, Administrator, Meyersdale Community Hospital, Meyersdale, PA 15552; (814) 634-5911.

Physician for Department of Emergency Services—200 bed general hospital in a beautiful university community located in western Pennsylvania. New construction and renovation program underway. Salary highly competitive. Pennsylvania license required. Contact: William B. Yeagley, M.D., Director of Emergency Services, Indiana Hospital, Indiana, PA 15701; telephone (412) 463-0261.

Director, Department of Pathology—Our 300-bed, university-affiliated teaching hospital in Philadelphia, Pennsylvania is seeking a director for the department of pathology. The department includes both anatomic and clinical divisions. Equal opportunity employer. To apply please send your resume to Department 763, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Emergency Medicine—Physician wanted to join established ER attending staff in large community hospital in southeastern Pennsylvania. Large house staff, teaching responsibilities, generous salary for 44 hour week. Benefits include four weeks paid vacation, CME time, hospitalization, life-disability insurance, pension plan. Call (717) 771-2221 or send c.v. to Director of Ambulatory Services, York Hospital, York, PA 17405.

House Staff Physician—Excellent opportunity for a *Pennsylvania licensed* physician to serve in a responsible position of a modern suburban Philadelphia, 286 bed hospital. JCAH accredited. $35,000 per year plus vacation, sick leave, paid pension plan, hospitalization, malpractice insurance, and disability insurance. Some evening and night duty required. For further information, contact John F. Dunleavy, Assistant Administrator, Holy Redeemer Hospital, Meadowbrook, PA 19046; telephone (215) 947-3000.

Psychiatrist, Board Certified or Board Eligible—Mental hospital in metropolitan area. Easy access to New York, Philadelphia, and close to Pocono resort area. Good salary with excellent fringe and retirement benefits. Pennsylvania license required. Contact: Henry Buxbaum, M.D., Superintendent, Clarks Summit State Hospital, Clarks Summit, PA 18411; telephone (717) 586-2011.

House Physicians—Full time with Pennsylvania license for 100-bed suburban hospital. Salary $31,000 plus. Excellent employee benefit program, including paid malpractice insurance. Please contact: Haverford Community Hospital, 2000 Old West Chester Pike, Havertown, PA 19083; (215) 449-0900, ext. 201. An equal opportunity employer.

Full Time Director, Department of Pediatrics—University affiliated program seeks applicant with academic experience in medical education; excellent salary and benefits; limited private medical practice. Contact David A. Smith, M.D., Medical Director, Polyclinic Medical Center, Harrisburg, PA 17105.

Family Practitioners—Tamaqua, northeast Pennsylvania. Area population about 18,000. Community assistance. Telephone collect (717) 668-1880 or write Tamaqua Area Chamber of Commerce, Tamaqua, PA 18252.

Pennsylvania and New Jersey Emergency Medicine positions available with fee-for-service group in suburban Philadelphia, central and eastern Pennsylvania, Pittsburgh, and northern and southern New Jersey hospitals. Physician directors also wanted. Send resume to: Northeast Emergency Medical Association, 500 Spruce St., Philadelphia, PA 19106; (215) 925-3511.

Orthopedic Surgeon Wanted—Associates for well established Orthopedic Clinic in Eastern Pennsylvania. First year, salary plus percentage. Partnership after one year. Board eligibility required. No investment needed. Write Department 709, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Emergency Physicians—A multi-hospital group of emergency physicians seeks members for full time positions at major hospital emergency departments in Philadelphia and other areas of Pennsylvania. In addition to full time emergency physicians, a physician director is sought for each emergency department. The group encourages professional and administrative autonomy in its member physicians. Financial arrangements are fee-for-service with minimum guarantee. Emergency-oriented educational programs for physicians are maintained by the group at no charge to its members. Compensation ranges from $40,000 to $60,000 per year for 48 hours per week. Write: Department 650, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa. 17043.

Primary Care Physicians—Progressive community hospital in central Pennsylvania, developing an innovative program in health care delivery, is seeking qualified family physicians to staff hospital-affiliated satellites and to establish private practices in the beautiful rolling hills of the Pennsylvania Dutch country. Clean communities, good schools, major medical school affiliations, and easy access to major metropolitan cities. Send c.v. to Department 764, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

CLASSIFIED ADVERTISING INFORMATION

Rates—$12.00 per insertion up to 30 words; 50 cents each additional word; $1.00 per insertion for answers sent in care of Pennsylvania Medical Society. Payable in advance.

COPY DEADLINE—Copy due by the first day of month preceding month of publication. Send to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pennsylvania 17043. The right is reserved to reject or modify copy to conform with publication rules.

DEPARTMENT NUMBERS—Advertisers using department numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers.

WORD COUNT—Count as one word all single words, two initials of a name, each abbreviation, isolated numbers, groups of numbers, hyphenated words. Count name and address as five words, telephone numbers as one, and "Write Department . . ., PENNSYLVANIA MEDICINE" as five.

House Coverage—Tired of the rat race of private practice—or are you just getting started and could use supplemental income? In either case, contact Sister Salvatore at Nazareth Hospital in northeast Philadelphia—(215) 331-8000—for a very attractive offer on house coverage. Malpractice insurance, vacation, life insurance, health plan are just a few of the benefits that are a part of this offer that includes a salary in the low 30s. Call today.

MISCELLANEOUS

Space in Fort Washington-Ambler Area Professional Center—Specialties or general practice; 4 treatment rooms, laboratory, dark room, business office, waiting room, consultation room. Primary or secondary office, furnished or unfurnished, shared lease possible. (215) 646-1665.

Postgraduate Course in Acupuncture—By The New York Society of Acupuncture for Physicians and Dentists, Inc. December 7-11, 1977. The course is organized to meet the new curriculum requirements of the New York State Boards for Medicine and Dentistry and approved for 50 credit hours. Barbizon Plaza Hotel, 58th and 6th Ave., New York City. For application please write Dr. S. J. Yue, 115 E. 61 St., New York, NY 10021. Phone mornings (212) 245-4737, or after 6:00 p.m. or all day Sunday.

Biomedical Electronics Service—Repairs medical, laboratory, and other electronic equipment. Will install and remove x-ray equipment. Walker Electronics®, 117 Sylvan Terrace, Harrisburg, PA 17104; telephone (717) 233-4716.

RESIDENCY IN PHYSICAL MEDICINE AND REHABILITATION

Dynamic, young program with balanced academic and clinical emphasis under the supervision of ten physiatrists. Three year program and integrated internship/residency with opportunity for research and pursuit of special interests both in medical school and private hospital settings. One year's credit for four years of general practice experience or training in another specialty. Stipends from $13,300 to $15,200 depending on qualifications. GI schooling benefits available for veterans. We will pay for visits in selected cases. Telephone or write for information to:

John F. Ditunno, Jr., M.D., Director
Department of Rehabilitation Medicine
Thomas Jefferson University Hospital
11th and Walnut Streets
Philadelphia, Pa. 19107
Telephone: (215) 829-6573

obituaries

• Indicates membership in the Pennsylvania Society at time of death.

• **Arthur W. Allen,** Hazelton; University of Pennsylvania School of Medicine, 1922; age 80; died August 9, 1977. He was a past president of the Hazelton branch of the Luzerne County Medical Association.

• **Ernest L. Armstrong,** Erie; University of Western Ontario School of Medicine, 1918; age 84; died August 10, 1977.

• **Michael P. Balmuth,** Pittsburgh; University of Cincinnati School of Medicine, 1969; age 33; died August 29, 1977.

• **Louis Brody,** Philadelphia; Jefferson Medical College, 1919; age 82; died August 1, 1977.

• **James C. Campbell,** Mt. Lebanon; Hahnemann Medical College, 1942; age 62; died August 11, 1977. He had practiced family medicine in Mt. Lebanon for thirty years.

• **Clarence C. Campman,** Pulaski; University of Pittsburgh School of Medicine, 1912; age 89; died September 2, 1977. He was a diplomate of the American Board of Internal Medicine and a member of the American College of Cardiologists. He had been an active member of the Mercer County Medical Society, which honored him in 1962 for fifty years of service. Dr. Campman served from 1945 to 1948 on the Pennsylvania Medical Service Board, which established the Blue Cross health insurance plan.

• **John R. Cope,** Greensburg; George Washington University School of Medicine, 1964; age 39; died August 25, 1977. He practiced medicine in Greensburg and was a staff doctor at Westmoreland Hospital. He had served as a volunteer physician in Vietnam and was the plant physician for Westinghouse Corporation, Waltz Mills.

• **Louis J. Decina,** Philadelphia; Hahnemann Medical College, 1938; age 65; died August 6, 1977. He had been chief of staff of Community Hospital in Philadelphia from 1943 until its closing and was most recently chief of St. Luke's and Children's Hospital's industrial clinics.

• **Samuel Ellis,** Bryn Mawr; University of Pennsylvania School of Medicine, 1907; age 93; died August 20, 1977. He had practiced medicine in the Philadelphia area for 70 years.

• **Basil J. Giletto,** Philadelphia; Jefferson Medical College, 1937; age 66; died August 12, 1977. He had been an obstetrician/gynecologist in the Philadelphia area for 40 years and was an associate professor in the same field at Jefferson Medical College.

• **Arthur M. Harmuth,** Pittsburgh; University of Pittsburgh School of Medicine, 1952; age 53; died August 26, 1977. He had been a pediatrician on the staffs of Children's and Magee-Women's hospitals.

• **Fred G. Helwig,** Allentown; George Washington University School of Medicine, 1936; age 66; died August 10, 1977. He founded the diabetes clinic at Allentown Hospital and the Lehigh Valley Diabetes Association. He taught clinical diabetes at Temple University and served on the commission on diabetes for the Pennsylvania Medical Society.

• **Robert J. Hitchens,** Watsontown; Temple University School of Medicine, 1947; age 54; died August 19, 1977.

• **John C. Kistler,** Allentown; Hahnemann Medical College, 1921; age 83; died August 5, 1977. He had been president of the board of trustees of Allentown State Hospital from 1948 to 1955 and had practiced general medicine in Allentown for 55 years.

• **Manfred O. Koellner,** Norristown; University of Graz School of Medicine, Styria, Austria, 1954; age 49; died August 20, 1977. He had been director of the Valley Forge Medical Center and a staff member of Montgomery and Sacred Heart hospitals, Norristown.

• **Daniel J. O'Connell,** Naples, Florida (formerly of Jeannette); Georgetown University School of Medicine, 1927; age 74; died August 5, 1977. He was a former president of the Jeannette District Memorial Hospital medical staff.

• **Leonard J. Quetsch,** Washington; Loyola University School of Medicine, 1951; age 53; died September 14, 1977. He had established the department of thoracic surgery at Washington Hospital and was a founder-member of the Pennsylvania Association for Thoracic Surgery. He was former president of the Washington County heart and tuberculosis and respiratory disease associations.

• **John W. Shadle,** Butler; University of Pennsylvania School of Medicine, 1927; age 76; died August 18, 1977. He had been a practicing physician in Butler for fifty years.

• **Camillus H. Spalletta,** Scranton; Jefferson Medical College, 1932; age 70; died August 24, 1977. He had practiced general medicine in Scranton for 44 years.

• **Charles H. Stone,** Coatesville; University of Pennsylvania School of Medicine, 1909; age 92; died August 11, 1977. He operated a medical and surgical practice in Coatesville for 58 years.

• **Irving O. Thomas,** Wilkes-Barre; Jefferson Medical College, 1927; age 75; died September 15, 1977. He had recently been honored by the Luzerne County Medical Society for having served as a physician for fifty years.

• **George F. Wheeling,** Windber; Jefferson Medical College, 1923; age 80; died August 11, 1977. He served from 1955 to 1975 as medical director of the Windber Hospital and Wheeling Clinic, taking the place of his father who had held that position from 1916 to 1955. He was a former president of the Cambria County Medical Society and was named physician of the year by that group in 1976.

Gary E. Bell, Jr., Johnstown; University of Pittsburgh School of Medicine, 1951; age 54; died August 24, 1977.

Edward W. Caughey, Duquesne; Temple University School of Medicine, 1941; age 62; died August 28, 1977.

John F. Coyne, Sharon; University of Pennsylvania School of Medicine, 1949; age 55; died September 4, 1977.

John C. Ewing, Pittsburgh; University of Pittsburgh School of Medicine, 1929; age 73; died August 4, 1977. He had been a general surgeon at Western Pennsylvania Hospital until his retirement in 1968, and was chief surgeon for the Pennsylvania Manufacturers Association.

Edward W. Heckert, Pittsburgh; Marquette University School of Medicine, 1948; age 56; died August 14, 1977. He was an assistant professor of medicine at the University of Pittsburgh School of Medicine, and chief of the heart clinic at the Veterans Administration Hospital, Oakland.

Thomas F. McTear, Philadelphia; Jefferson Medical College, 1940; age 64; died September 29, 1977. He was chief of medicine and president of staff of St. Mary's and St. Joseph's hospitals and had established the first intensive care unit at St. Mary's.

Joseph D. Waissman, Colver; University of Mexico School of Medicine, 1968; age 47; died August 12, 1977.

THE ANXIETY-SPECIFIC.

- a predictable pattern of patient response
- seldom associated with serious side effects, in proper dosage
- rarely interferes with mental acuity
- used concomitantly with many primary medications
- three dosage strengths meet most patient needs

LIBRIUM® Ⓒℳ

chlordiazepoxide HCl/Roche

5mg, 10mg, 25mg capsules

Libritabs® (chlordiazepoxide) available in 5 mg, 10 mg and 25 mg tablets.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Relief of anxiety and tension occurring alone or accompanying various disease states.

Contraindications: Patients with known hypersensitivity to the drug.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

***Usage in Pregnancy:* Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Usual Daily Dosage: Individualize for maximum beneficial effects. *Oral—Adults:* Mild and moderate anxiety and tension, 5 or 10 mg *t.i.d.* or *q.i.d.*; severe states, 20 or 25 mg *t.i.d.* or *q.i.d. Geriatric patients:* 5 mg *b.i.d.* to *q.i.d.* (See Precautions.)

Supplied: Librium® (chlordiazepoxide HCl) *Capsules,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500; Tel-E-Dose® packages of 100, available in trays of 4 reverse-numbered boxes of 25, and in boxes containing 10 strips of 10; Prescription Paks of 50, available singly and in trays of 10. Libritabs® (chlordiazepoxide) *Tablets,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500. With respect to clinical activity, capsules and tablets are indistinguishable.

THE ANXIETY-SPECIFIC.

Since its discovery in the research laboratories at Roche, Librium has been the object of ongoing pharmacologic and clinical investigation.

The published record on Librium is enormous. So large, in fact, we put it into a computer literature retrieval system to make it more accessible in answering your inquiries.*

It's a record that reveals a consistent pattern of patient response. A highly favorable benefits-to-risk ratio. And minimal interference with many primary medications.

Doing one thing well. Basically, that's what Librium is all about.

LIBRIUM® IV
chlordiazepoxide HCl/Roche

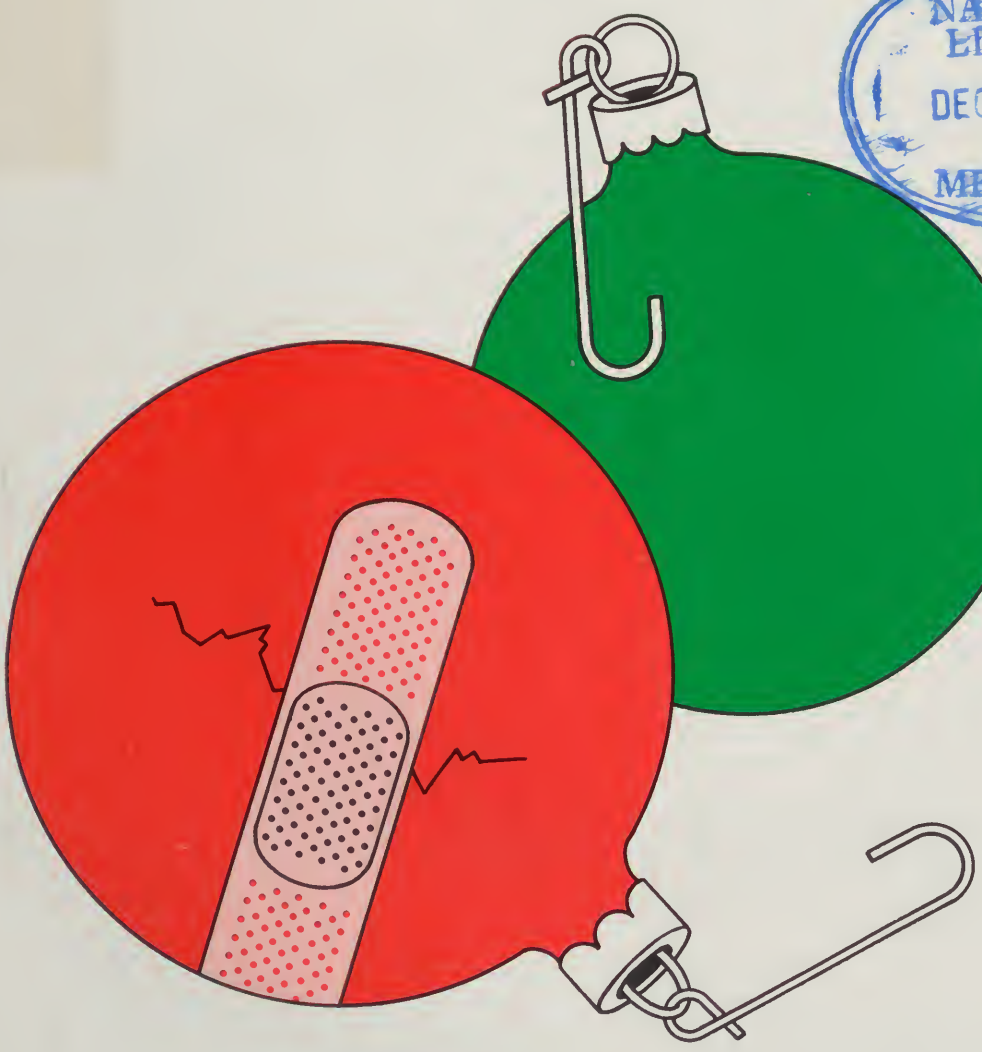
OF MEDICINE



A character all its own.

Valium (diazepam) is a benzodiazepine with a character all its own. Pharmacologically, it has been described as more potent mg-per-mg than other available anxiolytic benzodiazepines. Pharmacokinetically, only Valium provides active *diazepam* as well as the active metabolites 3-hydroxydiazepam, desmethyldiazepam and oxazepam.

But the individual character of Valium is even more apparent clinically than pharmacokinetically. And far more significant. That's because of the patient response obtained with Valium. A response which brings a calmer frame of mind. A response which has a pronounced effect on the somatic symptoms of anxiety, particularly muscular tension. A response which helps the patient feel more like himself again because of the way Valium reduces the overwhelming symptoms of anxiety and psychic tension.

Another important aspect of the clinical character of Valium is safety. Though drowsiness, ataxia and fatigue are possible, these and more serious side effects are rarely a problem. Of course, as with all CNS-acting drugs, patients taking Valium should be cautioned against driving, operating dangerous machinery or the simultaneous ingestion of alcohol.

Unquestionably, many psychotherapeutic agents, including other benzodiazepines, have antianxiety effects. But one fact remains: you get a certain kind of patient response with Valium. It's a response you want. A response you know. A response you trust as part of your overall management of anxiety and psychic tension.

Valium® (diazepam) IV

2-mg, 5-mg, 10-mg scored tablets

a prudent choice in psychic tension and anxiety

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology; spasticity caused by upper motor neuron disorders; athetosis; stiff-man syndrome; convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence.

Usage in Pregnancy: **Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

INSURANCE COMPANY ACTIVATED With income from assessments nearing the $7 million mark, the Society's Board of Trustees voted unanimously November 18 to activate the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) and implement the September 15 agreement with Argonaut Insurance Company. The agreement, which has a closing date of December 1, 1977, cancels all litigation between the State Society and Argonaut, and provides that PMSLIC will take over Argonaut's book of business and begin issuing policies effective January 1, 1978. Assessments collected through November 22 totalled $6.61 million. Over 9,500 members have paid the mandatory assessment for a total of $2.26 million, while an additional $4.35 million has come from some 3,700 members paying the selective assessments required of those seeking PMSLIC coverage. The PMSLIC Board of Directors has asked the Pennsylvania Insurance Department to issue the required Certificate of Authority by December 1.

TRANSITION PERIOD BEGINS Donald J. Fager Associates has been selected to manage the company during the transition period. The New York City firm manages the New York Medical Society Liability Insurance Company. Inquiries about assessments or the transition from Argonaut to the PMS Liability Insurance Company can be directed to PMSLIC, Suite 1728 Fidelity Building, 123 South Broad Street, Philadelphia, PA 19109; telephone (215) 545-6600. Malpractice insurance questions should be directed to Frank B. Hall and Company, 2700-Two INA Building, Philadelphia, PA 19103; telephone (215) 568-1700.

MANDATORY ASSESSMENT STILL BEING COLLECTED All Society members who pay dues are required to pay the mandatory assessment, which is still being collected. Active members pay $250; senior actives, $125; and residents, $25. Non-dues paying members (affiliate, associate, military, and disabled) are not required to pay the mandatory assessment. The selective assessment payment, in an amount based on the risk classification, is required of all Argonaut policyholders and others who seek PMSLIC coverage.

PMSLIC MAILS POLICY APPLICATIONS PMSLIC has mailed policy application kits to all Argonaut policyholders and all members who paid the selective assessment. Besides the application, the kits contain information about the company's officers and the forms of coverage available. Applications should be returned to PMSLIC, c/o Frank B. Hall, no later than December 10, 1977 in order to guarantee undisturbed insurance coverage.

SOCIETY CHANGES AUTO LEASING FIRM The Board of Trustees has named McCullagh Leasing, division of Commercial Credit Corporation, as the Society endorsed auto leasing firm effective December 1, 1977. It replaces Controlled Medical Leasing in the Society's program. Details will be announced in a general mailing after Christmas. The Society's Memberloan Program administered by Commercial Credit Corporation reports loans totalling more than $525,000 in the first five months of operation. The average loan is $14,000. For further information call toll-free (800) 638-0660 and ask for PMS Memberloan.

NEGOTIATIONS ON CLINICAL LAB RULES BEGIN The Society has begun negotiations on regulations for the Clinical Laboratories Act with the state Bureau of Laboratories. David W. Kistler, M.D., vice chairman of the Council on Education and Science, and Thomas L. Leaman, M.D., director of the Department of Family Medicine at the Milton S. Hershey Medical Center, met with bureau officials November 22. The Society seeks modification of the Act's regulations so that a majority of physicians' offices will be exempt from registration with the Department of Health.

INFLUENZA VACCINE RECOMMENDATIONS RELEASED The Pennsylvania Department of Health has released influenza immunization recommendations based on information released by the Public Health Service Advisory Committee on Immunization Practices. Details will appear in the January issue. Annual vaccination is recommended for adults and children of all ages who have such chronic conditions as: heart disease of any etiology, particularly with mitral stenosis or cardiac insufficiency; chronic bronchopulmonary diseases, such as chronic bronchitis, bronchiectasis, tuberculosis, emphysema, and cystic fibrosis; chronic renal disease; and diabetes mellitus and other chronic metabolic disorders. Those over 65 years of age also should receive annual vaccinations. Vaccine and dosage recommendations are as follows:

Influenza vaccine dosage by age, 1977-78

Age	Product Type	Dose Volume (ml)	Total CCA Units*	Number of Doses
18 years and older	Whole-virus or split-virus	0.5	400	1
6-17 years	Split-virus	0.5	400	1
3-5 years	Split-virus	0.25	200	2**
6-35 months	Split-virus	0.15	120	2**

*Representing equal amounts of A/Victoria/75 and B/Hong Kong/72
**4 weeks or more between doses; both doses essential for good protection

PHYSICIANS TO PAY LOWER WORKMEN'S COMP RATES The State Society Council on Medical Service was successful in convincing the Pennsylvania Workmen's Compensation Rating Bureau to establish a new classification for doctors. Rates are reduced from $1.15 to $.60 per $100 of payroll. This means an across the board decrease for all physicians. The Society sponsored workmen's compensation insurance program, administered by the Dodson Group, expects to bring costs even lower for those in the plan through its annual dividend.

CO-OP ISSUES CATALOGUE The Pennsylvania Medical Cooperative has issued its fall-winter catalogue along with the announcement by H. Robert Davis, M.D., Co-op president, that 1977 sales are 30 percent above 1976.

COMMISSION CRITICIZES HSA GUIDELINES The Society's formal comments on HEW's health planning guidelines, published September 23, 1977, were sent to the Department of Health, Education, and Welfare November 18. The Commission on Health Planning reviewed the guidelines and called them "inflexible, irrelevant numerical standards."

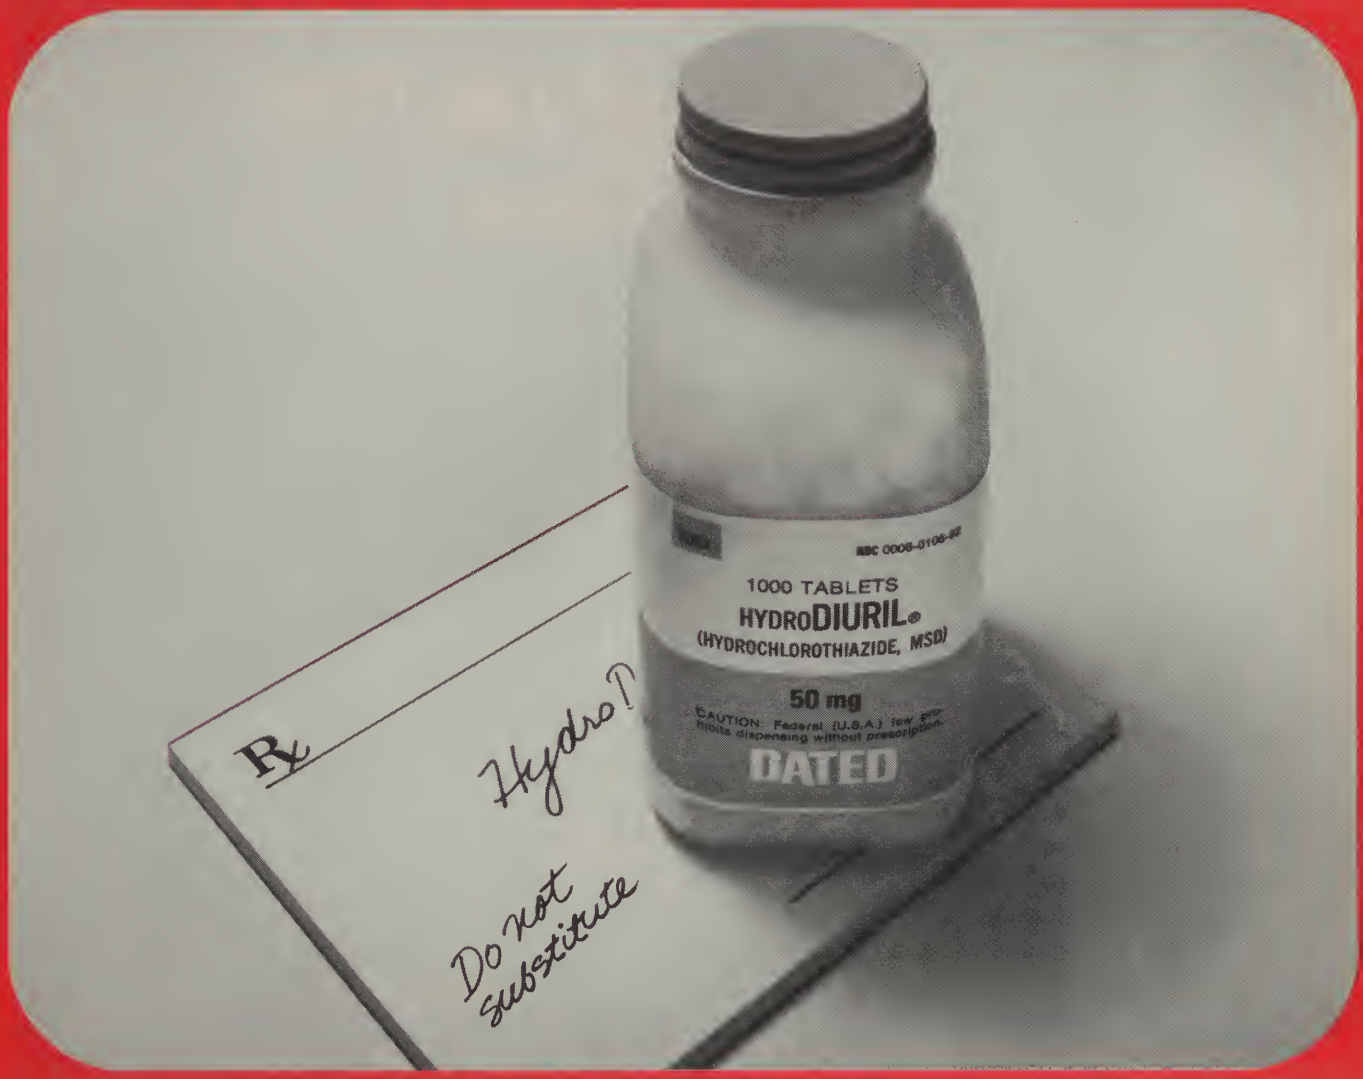
PENNSYLVANIA MEDICINE, established in 1897, is published monthly as the official publication of the Pennsylvania Medical Society. All original papers and correspondence should be directed to the Managing Editor. Subscription requests and changes of address should be sent to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa 17043. A subscription is $5.00 per year. Single issues are 50 cents. Second class postage is paid at Lemoyne, Pennsylvania 17043.

There is no substitute

yours...

Contraindications: Anuria; hypersensitivity to this or other sulfonamide-derived drugs.
Warnings: Use with caution in severe renal disease. In patients with renal disease, thiazides may precipitate azotemia. Cumulative effects may develop in patients with impaired renal function. Use with caution in patients with impaired hepatic function or progressive liver disease, since minor alterations of fluid and electrolyte balance may precipitate hepatic coma. May add to or potentiate action of other antihypertensive drugs; potentiation occurs with ganglionic or peripheral adrenergic blocking drugs. Sensitivity reactions may occur in patients with or without a history of allergy or bronchial asthma. Possibility of exacerbation or activation of systemic lupus erythematosus has been reported. Lithium generally should not be given with diuretics because they reduce its renal clearance and add a high risk of lithium toxicity. Read circulars for lithium preparations before use of such concomitant therapy. *Use in Pregnancy:* Thiazides cross placental barrier and appear in cord blood; in pregnancy, weigh anticipated benefit against possible hazards to fetus, including fetal or neonatal jaundice, thrombocytopenia, and possibly other adverse reactions that have occurred in adults. *Nursing Mothers:* Thiazides appear in breast milk; if use of drug is deemed essential, patient should stop nursing.
Precautions: Perform periodic determination of serum electrolytes to detect possible electrolyte imbalance. Observe all patients for clinical signs of fluid or electrolyte imbalance, namely, hyponatremia, hypochloremic alkalosis, and hypokalemia. Serum and urine electrolyte determinations are particularly important when patient is vomiting excessively or receiving parenteral fluids. Medication such as digitalis may also influence serum electrolytes. Warning signs, irrespective of cause, are dryness of mouth, thirst, weakness, lethargy, drowsiness, restlessness, muscle pains or cramps, muscular fatigue, hypotension, oliguria, tachycardia, and gastrointestinal disturbances such as nausea and vomiting. Hypokalemia may develop, especially with brisk diuresis, in severe cirrhosis, with concomitant corticosteroid or ACTH therapy, or with inadequate oral electrolyte intake. Hypokalemia can sensitize or exaggerate response of heart to toxic effects of digitalis (e.g., increased ventricular irritability). Hypokalemia may be avoided or treated by use of potassium supplements, such as foods with a high potassium content. Any chloride deficit is generally mild and usually does not require specific treatment except under extraordinary circumstances (as in liver disease or renal disease). Dilutional hyponatremia may occur in edematous patients in hot weather; appropriate therapy is water restriction, rather than administration of salt except in rare instances when the hyponatremia is life threatening. In actual salt depletion, appropriate replacement is the therapy of choice.
Hyperuricemia may occur or frank gout may be precipitated in certain patients. Insulin requirements in diabetic patients may be increased, decreased, or unchanged; latent diabetes mellitus may become manifest. Thiazides may increase responsiveness to tubocurarine. Antihypertensive effects of the drug may be enhanced in post-sympathectomy patients. May decrease arterial responsiveness to norepinephrine; this diminution is not sufficient to preclude effectiveness of the pressor agent for therapeutic use. If progressive renal im-

for experience—



or ours.

pairment becomes evident, consider withholding or discontinuing diuretic therapy. Thiazides may decrease serum PBI levels without signs of thyroid disturbance. Calcium excretion is decreased by thiazides. Pathologic changes in the parathyroid gland with hypercalcemia and hypophosphatemia have been observed in a few patients on prolonged therapy; thiazides should be discontinued before testing for parathyroid function.

Adverse Reactions: *Gastrointestinal System*—Anorexia; gastric irritation; nausea; vomiting; cramping; diarrhea; constipation; jaundice (intrahepatic cholestatic jaundice); pancreatitis; sialadenitis.

Central Nervous System—Dizziness; vertigo; paresthesias; headache; xanthopsia.

Hematologic—Leukopenia; agranulocytosis; thrombocytopenia; aplastic anemia.

Cardiovascular—Orthostatic hypotension (may be aggravated by alcohol, barbiturates, or narcotics).

Hypersensitivity—Purpura; photosensitivity; rash; urticaria; necrotizing angiitis (vasculitis) (cutaneous vasculitis); fever; respiratory distress including pneumonitis; anaphylactic reactions.

Other—Hyperglycemia; glycosuria; hyperuricemia; muscle spasm; weakness; restlessness; transient blurred vision.

Whenever adverse reactions are moderate or severe, thiazide dosage should be reduced or therapy withdrawn.

Note: When used with other antihypertensive drugs, careful observations for changes in blood pressure must be made, especially during initial therapy. Dosage of other antihypertensive agents must be reduced by at least 50 percent as soon as this drug is added to the regimen. As blood pressure falls under the potentiating effect of this agent, further reduction in dosage, or even discontinuation, of other antihypertensive drugs may be necessary.

How Supplied: Tablets containing 25 mg hydrochlorothiazide each in bottles of 100 and 1000 and single-unit packages of 100; Tablets containing 50 mg hydrochlorothiazide each in bottles of 100, 1000, and 5000 and single-unit packages of 100; Tablets containing 100 mg hydrochlorothiazide each in bottles of 100.

House begins streamlining of Society structure

Among the issues studied when the House of Delegates set the Society's policy and charted a course of action for the coming year was the organizational structure.

Five committees—those on objectives; medicine, religion, and bioethics; discipline; relations between medicine and osteopathy; and relationships with allied professions—were dissolved. The House paved the way for establishing a new commission of the Council on Education and Science to pursue the goals of the Committee on Medicine, Religion and Bioethics.

The House provided for greater flexibility for the Society's administrative councils by changing the Bylaws section dealing with these activities. It then referred to the Board of Trustees for consideration a resolution calling for the establishment of an additional council in the area of economic activities to assume certain of the responsibilities of the Council on Medical Service.

Also referred to the Board for implementation were proposals to change the names of the Council on Governmental Relations, to the Council on Legislative Activity; and the Council on Medical Service, to the Council on Socioeconomic Affairs.

The Board will continue its study of the Society's structure in 1978 and, as a result of the adoption of Resolution 77-24, will reappraise sections of the Bylaws dealing with terms of office for trustees and realignment of councilor districts. The Board will report on these matters to the 1978 House of Delegates.

THE 1977 HOUSE OF DELEGATES

VICE PRESIDENT LOVETTE, PRESIDENT ELECT BLADY, AND PRESIDENT KELLY

DELEGATES REGISTER AT ANNUAL SESSION

New officers begin terms; Board reorganizes

Changes in the Society's chain of command occurred October 26 at the 1977 meeting of the House of Delegates as John V. Blady, M.D., Philadelphia surgeon, was sworn in as president for 1977-78. John B. Lovette, M.D., of Johnstown, moved up to president elect after serving a year as vice president. Matthew Marshall, Jr., M.D., Pittsburgh urologist, was elected vice president by acclamation.

Other election results are as follows: G. Winfield Yarnall, M.D., Harrisburg, reelected secretary; D. Ernest Witt, M.D., Bloomsburg, and Donald E. Harrop, M.D., Phoenixville, reelected speaker and vice speaker of the House of Delegates; Kenneth L. Cooper, M.D., Williamsport, reelected trustee of the Seventh District; and David W. Clare, M.D., of Pittsburgh, reelected trustee of the Tenth District. Gerald L. Andriole, M.D., of Hazleton, was elected to a five year term as trustee from the Twelfth District. He replaces Orlo G. McCoy, M.D., of Canton, who did not seek reelection. Samuel F. Cohen, M.D., of Norristown, was elected to the Society's Judicial Council.

Dr. Marshall's election as vice president means that he will move up to president elect at the next annual meeting of the House and succeed to the office of president in 1979. He served as president of the Pennsylvania Medical Care Foundation from 1972 to 1975 and prior to that as chairman of the Society's Medical Care Appraisal Project.

An advocate for peer review for the quality and appropriateness of medical care, Dr. Marshall has been a member of the Society's Council on Medical Service since 1965, and served as chairman in 1968-69. He has been secretary of the Hospital Utilization Project since 1962.

Dr. Marshall has been a member of the State Society's House of Delegates since 1960, was president of the Allegheny County Medical Society in 1967, and has been a member of the Pennsylvania Delegation to the AMA since 1969.

Dr. Marshall, elected vice president, will be installed as Society president in 1979.

Also elected were five delegates to the American Medical Association. They are: Henry H. Fetterman, M.D., Allentown; John B. Lovette, M.D., Johnstown; Matthew Marshall, Jr., M.D., Pittsburgh; Robert N. Moyers, M.D., Meadville; and R. Robert Tyson, M.D., Philadelphia.

Five alternate delegates elected are: Robert J. Carroll, M.D., Pittsburgh; Lawrence D. Ellis, M.D., Pittsburgh; George Ross Fisher, M.D., Philadelphia; Wayne W. Helmick, M.D., Rochester; David J. Keck, M.D., Fairview; and John L. Kelly, M.D., Media.

The Society Board of Trustees in a reorganization meeting immediately following the adjournment of the House of Delegates reelected George A. Rowland, M.D., of Millville, as chairman; and William C. Ryan, M.D., of Somerset, as vice chairman.

The Board reelected John F. Rineman, executive vice president, as treasurer; David A. Smith, M.D., of Harrisburg, as medical editor of PENNSYLVANIA MEDICINE; and Pepper, Hamilton and Scheetz, of Philadelphia and Harrisburg, as legal counsel.

Delegates also elected district censors. They are, by county: Adams: W. North Sterrett, M.D.; Allegheny: William D. Stewart, M.D.; Armstrong: Donald Minteer, M.D.; Beaver: John G. Hallisey, M.D.; Bedford: Robin G. Torres, M.D.;

Berks: Brian A. Wummer, M.D.; Blair: John Hurst, M.D.; Bradford: Arthur B. King, M.D.; Bucks: Stanley F. Peters, M.D.; Butler: Robert C. McCorry, M.D.; Cambria: Warren F. White, M.D.; Carbon: vacancy;

Centre: H. Thompson Dale, M.D.; Chester: Michael B. Dooley, M.D.; Clarion: Charles C. Huston, M.D.; Clearfield: Fred Pease, M.D.; Clinton: George J. Trieres, M.D.; Columbia: C. Perry Cleaver, M.D.; Cleaver, M.D.;

Crawford: David D. Kirkpatrick, M.D.; Cumberland: Hans S. Roe, M.D.; Dauphin: Robert P. Dutlinger, M.D.; Delaware: Ar-

thur S. Reynolds, M.D.; Elk-Cameron: Robert J. Dickinson, M.D.; Erie: Robert L. Loeb, M.D.;

Fayette: Veronica Binns, M.D.; Franklin: Albert W. Freeman, M.D.; Greene: vacancy; Huntingdon: vacancy; Indiana: Richard N. Freda, M.D.; Jefferson: Nicholas F. Lorenzo, M.D.;

Lackawanna: Norman S. Berger, M.D.; Lancaster: William C. Phippen, M.D.; Lawrence: Gerald H. Weiner, M.D.; Lebanon: John D. Walmer, M.D.; Lehigh: Robert J. Beitel, Jr., M.D.; Luzerne: vacancy;

Lycoming: Franklin G. Wade, M.D.; McKean: Bruno P. Sicher, M.D.; Mercer: Anderson W. Donan, M.D.; Mifflin-Juniata: Donald E. Basom, M.D.; Monroe: vacancy; Montgomery: vacancy;

Montour: William Curry, Jr., M.D.; Northampton: Walter J. Filipek, M.D.; Northumberland: Nicholas Spock, M.D.; Perry: James O. Rumbaugh, Jr., M.D.; Philadelphia: Charles M. Thompson, M.D.; Potter: Francisco B. Villa, M.D.;

Schuylkill: Gabriel M. Lizak, M.D.; Somerset: Alexander Solosko, M.D.; Susquehanna: vacancy; Tioga: William A. Coolidge, M.D.; Union: Joseph Weightman, M.D.; Venango: Kenneth H. Heasley, M.D.;

Warren: William S. Walters, M.D.; Washington: John C. McGinnis, M.D.; Wayne-Pike: vacancy; Westmoreland: Leslie S. Pierce, M.D.; Wyoming: John S. Rinehimer, Jr., M.D.; and York: Donald R. Gross, M.D.

Dr. Blady is installed Society president and Dr. Lovette receives the badge of president elect from Board Chairman Rowland.

Dr. Andriole, above, is a newly elected member of the Board of Trustees. Dr. Harrop and Dr. Witt, above right, remain speaker and vice speaker of the House of Delegates. Delegates cast ballots early on the final day of Annual Session, below right.

House limits PMS role in Blue Shield

Relationships between the State Society and Pennsylvania Blue Shield are due for a change as a result of action taken at the 1977 Annual Session of the House of Delegates.

Acting on a recommendation from the Board of Trustees, the House set the following policy: In the future, no one in an elected leadership position in PMS, i.e., trustees and councilors and officers, shall serve on the Blue Shield Board of Directors.

The House also approved a recommendation that the Society's Board of Trustees discontinue making appointments of members at large to the corporate membership of Blue Shield. It further asked Blue Shield to develop alternative methods of soliciting nominees for election to the Blue Shield corporate membership in addition to the direct solicitation from county medical societies.

The Board of Trustees made its recommendations in a report to the House based on legal counsel's explanation of recent court actions.

The report said in part:

"There is physician involvement in the Blue Shield corporation and its Board. No one could argue the value of physician input into the policymaking process of any health care insurance program; qualified physician input is needed and should be provided for. Legal counsel pointed out to the Board that the Federal Trade Commission (FTC) is concerned that organized medicine not control that input.

"There are two basic ways for a participating physician to become a member of the Blue Shield corporation. The first is to be elected by his peers. Each participating physician is entitled to make nominations for election to the Blue Shield corporation. Each year Blue Shield solicits nominations from the various county medical societies for the names of physicians that might be interested in running. The county medical societies then forward the names to the Blue Shield nominating committee and the ballots are drawn. Even though the medical societies are not intended to be an exclusive source, county medical societies provide the majority of the names for the corporate membership election ballot.

"The second way for a physician to gain a position in the corporation is to be appointed as one of the members at large to the corporate membership of Pennsylvania Blue Shield. PMS is presently entitled to appoint a total of fourteen. The member at large positions are provided for in the Blue Shield Bylaws and are based on a one member at large for each 1,000 participating providers, or a fraction thereof, in a particular category, e.g., physicians, dentists, etc.

"The Board of Blue Shield is charged with implementing the policies of the corporation. The Blue Shield Board is elected from the corporation.

"Recent decisions by the United States Supreme Court have resolved any doubts concerning the applicability of the antitrust laws to the learned professions. The courts have determined that the antitrust laws apply to the practice of medicine, and that they particularly apply when the conduct under scrutiny fixes or stabilizes prices. Several courts have held health care prepayment plans like Pennsylvania Blue Shield immune from antitrust enforcement because they are within the scope of the McCarran Ferguson Act which exempts from the antitrust laws the business of insurance to the extent that it is regulated by the state. The same courts have refused to extend that exemption to the medical societies that deal with insurers. In fact, the interaction of medical societies and Blue Shield Plans is the subject of a specific investigation undertaken by the Federal Trade Commission which is reportedly concerned with the Blue Shield plans' control over prevailing fees. In short, we can expect increasing scrutiny over all PMS activities, and particularly its relationship with Pennsylvania Blue Shield."

GEORGE A. ROWLAND, M.D., PMS Board chairman, has initiated a program with the Pennsylvania State University College of Medicine, Hershey, entitled "Introduction to Professional Organizations." Students who take the nine-week elective course meet regularly at Society headquarters to hear lectures by staff members on the functions of professional organizations. Shown with Dr. Rowland are medical students Jim Sweetland, State College, and Robin Albert, Roslyn, New York, and Ronald M. Bachman, the Society's director of economic affairs.

PMS Credit Union holds organizational meeting

Under the guidance of the Council on Professional Relations and Services, the organizational meeting of the Pennsylvania Medical Society Credit Union was held November 3. Board and committee officers were elected, bylaws approved, and articles of incorporation developed for submission to the state's Department of Banking. State sanction of the articles and launching of the union are expected by mid-December.

Membership in the credit union is open to all State Society members, Auxiliary members, employes of members, of the State Society, and of county medical societies, and employes of affiliated organizations, such as the Pennsylvania Medical Cooperative and the Pennsylvania Medical Care Foundation. Spouses and immediate families of those listed are also eligible for membership.

Because formation of the credit union requires close attendance by all board members, representatives of each membership group were chosen from the central Pennsylvania area. Future board and committee positions will be open to member representatives throughout the state.

Charter members elected to the credit union board are: William A. Shaver, M.D., Council on Professional Relations and Services, president; David H. Small, of the Society staff, first vice president; Mrs. Raymond C. Grandon, past president of the Auxiliary, second vice president; Mrs. Carol Dolack, R.N., CMA, past president of the Pennsylvania Society, American Association of Medical Assistants, secretary; L. Riegel Haas, of the State Society staff, treasurer; and Thaddeus Lekawa, M.D., and Donald G. Crawford, M.D., of the Council.

Credit Committee members are: Donald G. Crawford, M.D., chairman; Donna F. Wenger, of the State Society staff, secretary; and Mrs. Donald H. Haselhuhn, of the Auxiliary.

CREDIT UNION CHARTER MEMBERS MEET

Members of the Supervisory Committee are: G. Winfield Yarnall, M.D., State Society secretary, chairman; Mrs. Raymond C. Grandon, secretary; and David A. Smith, M.D., medical editor of PENNSYLVANIA MEDICINE.

Study shows consumer greed motivates suits

Ohio consumers perceive "greed" or the "desire to get something for nothing" as the primary motivation behind the rising number of malpractice claims, according to a survey sponsored by the Ohio State Medical Association and conducted by two Ohio State University professors of consumer behavior.

The survey, involving 1,500 randomly chosen Ohio citizens, was based on the premise that since the practice of medicine as such has not changed drastically, increasing malpractice litigation must be caused by environmental factors.

The Ohio State Medical Association has published the results of the study in two books: *Consumer Attitudes Toward Health Care and Medical Malpractice,* which is designed for the health care professional, and *Consumers Speak About Health Care,* which is written for patients.

For more information contact the Ohio State Medical Association, Department of Communications, 600 S. High St., Columbus, OH 43215.

PaMPAC

Pennsylvania Medical Political Action Committee

A good investment!

- **Regular PaMPAC Membership is still $35**
  ($10 goes to AMPAC through a joint fundraising effort)
- **Sustaining Membership is still $100**
  ($50 goes to AMPAC through a joint fundraising effort)

PaMPAC P. O. Box 295 Lemoyne, Pa. 17043

If your practice is incorporated, PAMPAC and AMPAC voluntary political contributions should be written on a personal check. Contributions are not limited to the suggested amount. Neither the AMA nor PMS will favor or disadvantage anyone based upon the amounts of or failure to make PAC contributions. Copies of PAMPAC and AMPAC reports are filed with the Federal Election Commission and are available for purchase from the Federal Election Commission, Washington, D.C. Contributions are subject to the limitations of FEC Regulations, Sections 110.1, 110.2 and 110.5. (Federal regulations require this notice).

Society's 1977 loans aid 139 medical students

According to the annual report of the State Society's Educational and Scientific Trust, the Committee on Aid to Education granted in September a total of $181,550 in loans to 139 medical students. Of this amount, $164,550 was given to students attending Pennsylvania schools.

Medical education costs rose again for the 1977-78 school year. Tuition ranges from $4,000 at the three state-related schools to $6,100 at state-aided schools.

Despite enactment on October 12, 1976 of the Health Professions Assistance Act of 1976, which authorizes a new, insured medical student loan program, implementation did not occur in time for the 1977-78 school term.

Tax deductible donations to assist medical students may be sent now for 1977 income tax deduction purposes. Send your check to the Educational and Scientific Trust, 20 Erford Rd., Lemoyne, PA 17043

Some relief was given by the Federal Guaranteed Student Loan Program, of which the Pennsylvania Higher Education Assistance Agency is a part. PHEAA and the lending institutions were able to provide maximum loans of $5,000 to many students for the current year.

Federal legislation provided additional relief to funding problems. An amendment to the Public Health Service Act, which provides relief for medical students who borrowed funds prior to October 12, 1976, became law on August 1, 1977. These students are now eligible for loan forgiveness for practice in designated physician shortage areas.

Thus all 93 members of the Class of 1977 who borrowed a total of $272,790 from the Trust during their four years in medical school are again eligible to have 85 percent of their Trust and other debts repaid over a three-year period of practice in shortage areas.

The total assets of the Trust on December 31, 1976 reached $2,009,891, of which $1,623,575 is invested in student loans.

Dr. Kelly keynotes medical staff workshop

William J. Kelly, M.D., then State Society president, called for an increase in the effectiveness of peer review in opening remarks at the AMA hospital medical staff leadership workshop in Philadelphia on September 23.

"Unless we make peer review work, the public will determine that the practice of medicine is too critical to be left up to doctors.

"If we expect . . . to continue to enjoy professional freedom we must . . . require a basic change in our attitude toward medical staff organization and activities."

According to Dr. Kelly, such a change would require:

- the surrender of a certain amount of individual medical sovereignty to the medical staff;
- determination of leadership posts on the basis of capability rather than "seniority and ceremony";
- the availability of independent legal counsel that is experienced in health and administrative law;
- regular revision of hospital medical staff bylaws under the guidance of professionals not affiliated with the hospital; and
- improved communications between organized medicine and hospital medical staffs.

Several "experiments" in Pennsylvania have demonstrated the effectiveness of such communication. The Philadelphia and Allegheny county medical societies, for example, have strong ties with hospital medical staffs; the Allegheny County Medical Society provides two voting slots on its board of trustees for the hospital medical staff committee; in other parts of the state, county societies have made the medical staff president a voting member of the society board.

"All of these are beginning steps, but they must be extended. We must find ways for organized medicine to assist hospital medical staffs.

"Every hospital has its problems, but those institutions that enjoy a collaborative working relationship among the board of trustees, the chief executive officer, and the hospital medical staff are those which truly best serve the interests of the community."

PaMPAC

If your practice is incorporated, PAMPAC and AMPAC voluntary political contributions should be written on a personal check. Contributions are not limited to the suggested amount. Neither the AMA nor PMS will favor or disadvantage anyone based upon the amounts of or failure to make PAC contributions. Copies of PAMPAC and AMPAC reports are filed with the Federal Election Commission and are available for purchase from the Federal Election Commission, Washington, D.C. Contributions are subject to the limitations of FEC Regulations, Sections 110.1, 110.2 and 110.5. (Federal regulations require this notice).

TRIAMTERENE CONSERVES POTASSIUM WHILE HYDROCHLOROTHIAZIDE LOWERS BLOOD PRESSURE

DYAZIDE®

Each capsule contains 50 mg. of Dyrenium® (triamterene, SK&F Co.) and 25 mg. of hydrochlorothiazide.

MAKES SENSE

Before prescribing, see complete prescribing information in SK&F Co. literature or PDR. A brief summary follows:

* Warning
This drug is not indicated for initial therapy of edema or hypertension. Edema or hypertension requires therapy titrated to the individual. If this combination represents the dosage so determined, its use may be more convenient in patient management. Treatment of hypertension and edema is not static, but must be reevaluated as conditions in each patient warrant.

* **Indications:** When the combination represents the dosage determined by titration: Adjunctive therapy in edema associated with congestive heart failure, hepatic cirrhosis, the nephrotic syndrome. Corticosteroid and estrogen-induced edema, idiopathic edema; hypertension, when the potassium sparing action of triamterene is warranted. (See Box Warning.) Routine use of diuretics in healthy pregnant women is inappropriate; they are indicated in pregnancy only when edema is due to pathological causes.

Contraindications: Further use in anuria, progressive renal or hepatic dysfunction, hyperkalemia. Pre-existing elevated serum potassium. Hypersensitivity to either component or other sulfonamide-derived drugs.

Warnings: Do not use potassium supplements, dietary or otherwise, unless hypokalemia develops or dietary intake of potassium is markedly impaired. If supplementary potassium is needed, potassium tablets should not be used. Hyperkalemia can occur, and has been associated with cardiac irregularities. It is more likely in the severely ill, with urine volume less than one liter/day, the elderly and diabetics with suspected or confirmed renal insufficiency. Periodically, serum K^+ levels should be determined. If hyperkalemia develops, substitute a thiazide alone, restrict K^+ intake. **Associated widened QRS complex or arrhythmia requires prompt additional therapy.** Thiazides cross the placental barrier and appear in cord blood. Use in pregnancy requires weighing anticipated benefits against possible hazards, including fetal or neonatal jaundice, thrombocytopenia, other adverse reactions seen in adults. Thiazides appear and triamterene may appear in breast milk. If their use is essential, the patient should stop nursing. Adequate information on use in children is not available.

Precautions: Do periodic serum electrolyte determinations (particularly important in patients vomiting excessively or receiving parenteral fluids). Periodic BUN and serum creatinine determinations should be made, especially in the elderly, diabetics or those with suspected or confirmed renal insufficiency. Watch for signs of impending coma in severe liver disease. If spironolactone is used concomitantly, determine serum K^+ frequently; both can cause K^+ retention and elevated serum K^+. Two deaths have been reported with such concomitant therapy (in one, recommended dosage was exceeded, in the other serum electrolytes were not properly monitored). Observe regularly for possible blood dyscrasias, liver damage, other idiosyncratic reactions. Blood dyscrasias have been reported in patients receiving triamterene, and leukopenia, thrombocytopenia, agranulocytosis, and aplastic anemia have been reported with thiazides. Triamterene is a weak folic acid antagonist. Do periodic blood studies in cirrhotics with splenomegaly. Antihypertensive effect may be enhanced in post-sympathectomy patients. Use cautiously in surgical patients. The following may occur: transient elevated BUN or creatinine or both, hyperglycemia and glycosuria (diabetic insulin requirements may be altered), hyperuricemia and gout, digitalis intoxication (in hypokalemia), decreasing alkali reserve with possible metabolic acidosis. 'Dyazide' interferes with fluorescent measurement of quinidine.

Adverse Reactions: Muscle cramps, weakness, dizziness, headache, dry mouth; anaphylaxis, rash, urticaria, photosensitivity, purpura, other dermatological conditions; nausea and vomiting, diarrhea, constipation, other gastrointestinal disturbances. Necrotizing vasculitis, paresthesias, icterus, pancreatitis, xanthopsia and, rarely, allergic pneumonitis have occurred with thiazides alone.

Supplied: Bottles of 100 and 1000 capsules; Single Unit Packages of 100 (intended for institutional use only).

FOR LONG-TERM CONTROL OF HYPERTENSION.* SERUM K^+ AND BUN SHOULD BE CHECKED PERIODICALLY. (SEE WARNINGS SECTION.)

Insurance company approved by House of Delegates

The State Society's House of Delegates unanimously endorsed the establishment of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) at the 1977 Annual Session in Lancaster October 24-26.

Delegates unanimously approved the $250 mandatory assessment for active members ($125 for senior active members, $25 for residents). Also supported unanimously was the selective assessment of policyholders, who will pay from $385 for Class I insureds to $2,625 for Class V insureds.

The House acted on 45 resolutions presented by the component societies. Resolutions and their disposition are summarized below.

Summary of Resolutions

77-1 (Berks): Establishes a legal division staffed with personnel responsible only to the Society. REJECTED.

77-2 (Dauphin): Reinstates associate members as full members eligible to all the rights and privileges of membership and proportionate representation to PMS and the AMA. REFERRED TO BOARD

77-3 (Mercer): State specialty societies to appoint physicians to write standards of informed consent for their specialty. REFERRED TO INTERSPECIALTY COMMITTEE

77-4 (Philadelphia): Asks Blue Shield to study inequities in payments due physicians and establish payment schedules on an updated and equitable basis. REFERRED TO COUNCIL ON MEDICAL SERVICE; REPORT 1978

77-5 (Westmoreland): Asks the AMA to assist PSROs in locating corporate liability insurance. (Substitute Resolution: Requests AMA to assist PSROs in securing corporate liability insurance which is not limited or restricted by any requirement other than that of being a qualified PSRO). ADOPTED SUBSTITUTE

77-6 (College of Ob/Gyn): Asks Blue Shield to consult advisory committee of each specialty society before declaring operative procedures obsolete and unreimbursable. (Substitute Resolution: Encourages Blue Shield to consult with Council on Medical Service and its advisory committees prior to making such decisions). ADOPTED SUBSTITUTE

77-7 (College of Ob/Gyn): Asks Blue Shield to contact specialty societies for lists of individuals to serve as advisors and to limit terms of such advisors. (Substitute Resolution: Urges Blue Shield to select practicing physicians qualified in their specialty to serve as medical advisors). ADOPTED SUBSTITUTE

77-8 (Lehigh): Asks Blue Shield and other insurance carriers to find new mechanisms to establish concurrent and ongoing fee updates. REFERRED TO COUNCIL ON MEDICAL SERVICE; REPORT 1978

77-9 (Allegheny): Substitute Resolution cites TRIS as an example of the burdens caused by federal regulations on manufacturers. Asks the AMA to sponsor legislation requiring the federal government to share liability for loss incurred by individuals or companies complying in good faith with public health or safety regulations that are subsequently withdrawn or reversed. ADOPTED SUBSTITUTE

77-10 (Erie): State Board to invest local county medical societies with effective legal and disciplinary powers. (Substitute Resolution: PMS to continue discussions with the State Board to investigate means of joint action in developing effective mechanisms to deal promptly with disciplinary problems). ADOPTED SUBSTITUTE

77-11 (Delaware): Congratulates William Y. Rial, M.D., upon his election as Speaker of the AMA House of Delegates. ADOPTED

77-12 (Delaware): Commends the editor, Publication Committee, contributing editors, and staff of PENNSYLVANIA MEDICINE for their continued excellence. ADOPTED

77-13 (Delaware): County society members encouraged to belong to the AMA but not compelled to do so. ADOPTED

77-14 (Delaware): Reaffirm the policy that only PMS members receive Argonaut coverage. ADOPTED

77-15 (Delaware): Society to consider the feasibility of establishing in house legal counsel responsible only to PMS Board of Trustees. REJECTED

77-16 (Delaware): PMS Board requested to report on the status of countersuits filed in Pennsylvania. (Report from legal counsel submitted to House by Board of Trustees satisfied intent of this resolution). FILED

77-17 (Delaware): Insurance Commissioner asked what regulations have been implemented to reduce the cost of malpractice insurance claims and the procedures required for adjusting claims in Pennsylvania. ADOPTED

77-18 (Philadelphia): Opposes rules by Blue Shield and other insurance carriers which term selective procedures unnecessary or prohibited and further oppose agreements which deny a physician the right to bill a patient for care not covered under the agreement. (Substitute Resolution: Carriers should not establish rules and regulations which arbitrarily identify selected procedures as unnecessary without appropriate professional medical review). ADOPTED SUBSTITUTE

77-19 (Eugene B. Rex, M.D., Otolaryngology): Establishes a professional liability committee within each specialty to review cases and to make recommendations to the involved physician, the defendant's lawyer, the insurance carrier, and the arbitration panel. Cases of gross negligence to be reported to the President of the appropriate specialty academy. Establishes a medical-legal committee staffed by a trial lawyer to represent members interested in these matters. REFERRED TO BOARD

77-20 (Lehigh): Creates an additional council to assume certain responsibilities of the Council on Medical Service. (House changed Bylaws to give PMS Board flexibility to change names and accountabilities of administrative councils). REFERRED TO BOARD

77-21 (Westmoreland): Supports withdrawal from the market of anorexiants for use in treatment of obesity. (Substitute Resolution: Obesity is a medical problem centering on sound nutrition and adequate exercise, etc.). ADOPTED SUBSTITUTE

77-22 (Montgomery): Determine how much litigation non-PMS member Argonaut policyholders may attract; if appropriate provide a premium correction to regular policyholders; and revise county assignment of Argonaut malpractice incidents. REJECTED

which considers, acts on 45 resolutions

77-23 (Berks): PMS to write guidelines for the duties of physicians' assistants; county societies to review educational training of physicians' assistants and protocol under which they serve. (Amendment: PMS to write guidelines for the duties of physicians' assistants and clarify status; also to initiate regulation of physicians' assistants). ADOPTED AS AMENDED

77-24 (Allegheny): Board of Trustees to study terms of office of trustees and designation of Councilor Districts and report back to the House of Delegates. ADOPTED

77-25 (Montgomery): PMS to inform the AMA that proposed direct dues billing for AMA members be offered to states on an optional basis. ADOPTED SIMILAR SUBSTITUTE

77-26 (Montgomery): Society should assess physicians for dues for those years they held Argonaut Insurance but not Society membership. REJECTED

77-27 (Montgomery): Denies Argonaut Insurance to non-members. Calls for a census of non-PMS members owning Argonaut policies to determine the extent of litigation they attract and, if appropriate, a premium correction occur to regular policyholders. Asks revision of county assignment of Argonaut malpractice incidents. FILED AND REJECTED

77-28 (Montgomery): Asks return of interest on monies collected for state arbitration panels to the arbitration fund. FILED

77-29 (Montgomery): Asks that, for precise statistical recording, alleged or real malpractice incidents be attributed to the county where they occur. ADOPTED

77-30 (Montgomery): AMA delegation to introduce resolution to withhold support of AMA's Comprehensive Health Care Insurance Act of 1977. REJECTED

77-31 (Dauphin): Condemns the contract between the United Auto Workers and Blue Shield regarding vision and hearing care which bars payment to physicians who are non-participating physicians in Blue Shield because such policy restricts the patients' freedom of choice of physician. (Amendment: Deleted call for study of legal avenues to combat this action). ADOPTED AS AMENDED

77-32 (Delaware): PMS to prepare proper legislation or administrative amendments to insure that the interest income generated from medical malpractice arbitration fees are returned to the arbitration fund. ADOPTED

77-33 (Delaware): Society to consider restructuring the present 12 PMS Councilor Districts to coincide with the 12 PSRO areas. REJECTED

77-34 (Delaware): Requests the governor to urge the legislature to finalize the report of the 10.06 joint committee (to oversee Act 111) and distribute it to all interested parties. ADOPTED

77-35 (Delaware): Asks Leroy Gehris, M.D., to continue to report activities of societies in the Second Councilor District; reports of individual Councilors continue to appear in the *Official Reports Book*. ADOPTED

77-36 (Delaware): Urges that PMSLIC Board composition be on a territorial basis. (Substitute Resolution: PMSLIC to have representation from the various risk classes, the geographic distribution of PMSLIC insureds, and members of the Pennsylvania Medical Society). ADOPTED SUBSTITUTE

77-37 (Delaware): PMS to report the number of individual claims that have been peer reviewed, to report the number of claims by county, number of claims by class and the number of incidents by county for the period 1971-1976 in the Argonaut program. ADOPTED

77-38 (Montgomery): PMS create an agency to study C.A.T. REFERRED TO COMMISSION ON HEALTH PLANNING

77-39 (Northumberland): PMS to fight DPW proposal for additional paperwork on MA patient visits by advocating or participating in a paper strike until such regulation is rescinded. REJECTED

77-40 (Butler): Commends Pennsylvania Insurance Commissioner for his diligence which has resulted in lower medical costs to the citizens of Pennsylvania. (Substitute Resolution: Commends Pennsylvania Insurance Commissioner for his diligence in attending to the insurance needs of the citizens of the Commonwealth of Pennsylvania). ADOPTED SUBSTITUTE

77-41 (Academy of O & O): Oppose the Blue Shield UAW vision and hearing care program. See action on 77-31. REJECTED

77-42 (Philadelphia): Re-examine and re-evaluate community mental health centers because their costs per patient visit far exceed those of a private practicing psychiatrist even though personnel treating most patients are not physicians. ADOPTED

77-43 (Delaware): Society no longer to employ Frank B. Hall as insurance broker or administrator. WITHDRAWN

77-44 (Clinton): Asks that affirmative action plans to bring minority members into the profession prepare aspiring students to meet general requirements for admission to medical school and not lower standards to accommodate students. (Amendment: PMS to support programs that prepare minority premedical students prior to admission to meet the general requirements for admission). ADOPTED AS AMENDED

77-45 (Clinton): Seeks the help of the AMA and Pennsylvania's congressional delegation to oppose the proposed HEW regulations implementing the national Health Planning and Resources Development Act of 1974 (P.L. 93-641) because they are arbitrary, rigid, and lacking input from both providers and consumers at the local level. ADOPTED

Noncompliance—more than educational deficiency

The medical education of physicians emphasizes the accurate assessment of symptoms in order that a correct diagnosis and appropriate therapy may be given. Unfortunately this is really only the beginning for many physicians.

Too often patients fail to follow a prescribed therapeutic regimen. Compliance, or lack of it, apparently is not related to sex, age, social standing, education, or intelligence, and thus it is difficult to predict which patients will be noncompliant. Traditionally the physician assumed (and logically so) that if a patient is concerned enough to visit the doctor, he will adhere to the recommended therapy. Studies have shown this to be untrue.

Many physicians believe that insufficient knowledge of the disease, its course and prognosis, and the reason for and method of treatment is solely responsible for the problem. Sackett et al. (*Lancet* 1:1205, 1975) reviewed this premise in a study of hypertension and found that education does not have a positive influence on therapeutic compliance.

The complexity of therapy also may lead to noncompliance. Generally the more medications in a regimen, the lower the rate of compliance. Patients become confused when a number of drugs must be taken in different time frames. Tendency to alter the schedule or omit drugs increases with variance from the patient's routine.

The cost and side effects of drugs may hinder compliance. When drugs are expensive, and especially when refills are required, the patient may discontinue prescribed therapy. Few medications are without side effects. Although some may seem minor to us as physicians, they are both unexpected and irritating to patients who are not forewarned.

What can be done to improve compliance? Recommend educational material. Even though knowledge has not proved to be a major factor, patients should have an accurate assessment of their condition. Try to keep the therapy simple; prescribe a few drugs that may be taken on a compatible schedule, write the instructions, and be sure your patient understands.

Prescribe generically when practical to lessen expense. Be alert for side effects, warn patients of them, and ask specific questions to determine if they are occurring.

Most importantly, be aware that the physician's attitude and the viability of the physician–patient relationship contribute to an attitude of compliance. When the physician supplies the motivation for therapy by showing concern for the patient's well-being, encouraging and asking questions, and emphasizing the importance of following the regimen, noncompliance will be reduced.

Hippocrates wrote, "The art has three factors, the disease, the patient, the physician. The physician is the servant of the art. The patient must cooperate with the physician in combating the disease." The thoughtful physician communicates the art and empathy that is so necessary in securing the patient's cooperation.

David A. Smith, M.D.
Medical Editor

Medicare report laxity

Reprinted from the Wilkes-Barre Times Leader Evening News Record

A number of regional physicians were on the list last March when the Department of Health, Education, and Welfare issued an inexcusably flawed report of doctors said to have done more than $100,000 in medicare business during 1975.

Now, six months later, HEW has gotten around to putting out a corrected list which sets the record straight — on the basis of reviews which should have been made before the first listing was published.

A few rather grudging apologies have been offered by HEW. Secretary Joseph A. Califano said in a statement accompanying the revised list: "I regret any inconvenience for physicians whose records were incorrectly reported on our original list." In fact, considerably more than "inconvenience" was involved.

The basic idea of letting the public know which physicians have made an excessively good thing of medicare fees is sound. Taxpayers and patients have a right to such information. It is a matter of simple fairness, however, to make sure the information is accurate before giving it out.

This the agency conspicuously failed to do prior to issuance of the March 14 report. As a result, it was just plain wrong about some of the doctors it listed. Reputations were unjustly tarnished, and some physicians suffered harsh consequences.

The erroneous listing, which included the names and addresses of a number of wronged physicians, was apparently the inept work of some nameless bureaucrat in HEW, or several of them. Would it not be proper for Califano to name the individual or individuals who made the error? And what, if anything, has been the penalty for the gross negligence?

The big lesson to be drawn from this episode is, obviously, that HEW — or any other agency — should be sure of its facts before holding people up to public calumny. What has occurred also points to serious shortcomings in HEW's procedures for keeping tabs on how much is paid out, and to whom. The amount of error in the March 14 list revealed an intolerable degree of laxity which will adversely affect the credibility of HEW in the future operations and announcements of the far-flung agency over which Mr. Califano presides.

in my opinion

What price the physician's assistant?

The September 19 issue of *Medical World News* carried an interview by Washington correspondent Mike Mealey entitled "Califano on 'Profligate Doctors' " that made me sit up quickly.

HEW's head, Joseph A. Califano, Jr., is a declared antagonist of the American practicing physician, whom he calls the prime mover in all that's extravagant about the cost of medical care. He insists that the physician is almost the sole villain in a sea of healing arts which would flow serenely from Washington to the hinterlands were his prodigal ways to be altered.

Califano didn't earn $500,000 in his last year of legal practice by acting dull. He must know that the cost of medical care is pumped up by a surging flow of Federal money into the system that inflates the cost of every medical service from the orderly's to the engineer's. And yet the chief of HEW piles this excess on the backs of the patient-seeing doctors, while his boss in the White House shores him up.

"The President is totally behind the statement I made to the AMA last June in San Francisco," said Califano. Califano said then that physician greed and fiscal ineptitude threaten to bankrupt America's health care system. He continued in the Mealey interview: "The days of the doctor with a little black bag are over, medicine is big business . . . the days of the doctors of profligacy are going to come to an end."

Blackguarding of practicing physicians en masse seems to be one of the secretary's solutions to the problem of skyrocketing medical costs.

In offering this essay I risk the displeasure of many of you who have embraced the physician's assistant program with great and laudable enthusiasm, both as formal teachers and as field mentors. Physicians' assistants have been welcome and useful over the short run during the physician shortage in underserved areas. The long range view, however, cries for our attention.

I have long been an opponent of the physician's assistant concept on anything but a temporary basis, calling it an invitation to neocultism, a poorly conceived notion that is doomed to mediocrity and failure, an intent that is gratuitously unfair to physicians' assistants and to the patients they serve.

What happens to the 40-year-old physician's assistant, 15 years in position, when his physician mentor retires or dies? Does he leave his calling to become a housepainter? An orderly? An insurance salesman? Of course not. He seeks another physician mentor and, while he may succeed, most likely he will not. In these later times the greatly increased numbers of young physicians will make his wares less desirable, and the plea for aid in physician-deprived areas will be answered by—physicians.

I foresee in the next decade a large body of middle aged, disillusioned physicians' assistants with children to educate, mortgages to satisfy, livings to be earned, turning to politicians with the question, "Where do we go from here?"

Not if Mr. Califano or someone who thinks like him is ascendant (and there will, alas, always be a Stafford Cripps or a Wilbur Cohen or an Aneurin Bevan to tell us how to make medicine better). The *Medical World News* interview has recorded Califano's message. "We have to get the paramedicals working, to crack the principle that we pay for services only when a doctor is present. . . . We have to break the hammerlock that doctors have on paramedicals."

And when that day comes, when the physician is no longer supervisory of all medical care, when the hammerlock is broken, will we look back with regret at our role in continuing the physician's assistant program? I think so.

Sam Faris, M.D.
Glenside

Dr. Faris is a Montgomery County delegate to the PMS House of Delegates, past president of the Montgomery County Medical Society, and editor of the county society's bulletin.

MDs in the news

Charles E. Cleland, M.D., and **Elizabeth Cleland, M.D.**, were honored recently as "Persons of the Year" by the Kane Chamber of Commerce, McKean County. Among those attending the testimonial dinner was **David J. Keck, M.D.**, Eighth District Trustee, who, as a representative of the Pennsylvania Medical Society, commended the Clelands for their service as past presidents of the McKean County Medical Society and as delegates to the State Society House of Delegates. The honored couple has been active in Kane community life since 1933 and brought Kane international publicity with their famed "Ragweed for Harry" allergy program. Dr. Charles is a member of the American Academy of Allergy and is a founding member and past president of the Pennsylvania Allergy Society, of which Dr. Elizabeth is also a member. Dr. Charles is also a charter fellow of the American Academy of Family Physicians and former chief of staff of the Kane Community Hospital.

Paul J. Poinsard, M.D., Simon Kramer, M.D., and **Joseph F. Rodgers, M.D.**, were recently elected officers of the Thomas Jefferson University Hospital medical staff for the 1977-78 year. Dr. Poinsard, the newly elected president, is a professor and director of postgraduate education in the department of psychiatry and human behavior at Jefferson Medical College and is on the staff of the Institute of Pennsylvania Hospital. Dr. Kramer, professor and chairman of the department of radiation therapy and nuclear medicine at Jefferson University Hospital, is the new vice president. Dr. Rodgers, who was elected to the post of secretary-treasurer, is a clinical associate professor of medicine at Jefferson Medical College.

Fred E. Murdock, M.D., DuBois, was honored recently by the Pennsylvania Medical Society for 50 years of service to the profession. Dr. Murdock was graduated from the University of Iowa College of Medicine in 1927 and served as a medical missionary in Puerto Rico from 1928 to 1935. His practice in DuBois was begun in 1936 and has been frequently interrupted by medical missionary assignments in many parts of the world.

Two physicians at the University of Pittsburgh School of Medicine recently became officers of the American College of Surgeons. **Mark M. Ravitch, M.D.**, was elected first vice president and **William F. Donaldson, M.D.**, was elected regent of the organization. Dr. Ravitch, an authority on the use of staples in general and thoracic surgery, joined the staff of the University Health Center in 1969. He was formerly professor of surgery at Johns Hopkins University and the University of Chicago. He is vice president of the southwestern Pennsylvania chapter of the ACS. Dr. Donaldson, clinical professor of orthopedic surgery at Pitt's School of Medicine and medical staff president at Presbyterian-University Hospital, joined the staff in 1951. He is a special consultant on orthopedic surgery and vice chairman of the board of trustees for the *Journal of Bone and Joint Surgery*.

Edward J. Resnick, M.D., Penn Valley, was recently elected president of the Philadelphia Orthopedic Society. Dr. Resnick is associate professor of orthopedic surgery at Temple University Medical Center and is on the staffs of St. Christopher's Hospital for Children and Shriners Hospital for Crippled Children. He is a fellow of the American Academy of Orthopedic Surgeons and the American College of Surgeons. He is secretary of the Philadelphia County Medical Society.

Richard P. Bindie, M.D., has been appointed director of the department of pathology of Pottsville Hospital and Warne Clinic. He was named associate pathologist of the hospital in 1971, a position in which he continued until his new appointment. Dr. Bindie is secretary of the Schuylkill County Medical Society and a member of the Pennsylvania Association of Clinical Pathologists.

THE PORTRAIT of the late Dr. Leroy W. Krumperman, professor and chairman of the department of anesthesiology at Temple University Hospital and Medical School, was recently presented to the School of Medicine. Viewing the portrait by area artist Albert Hampson are ***Thomas C. Deas, M.D.****, Wynnewood, professor of anesthesiology and chairman of the Krumperman Portrait Committee;* ***Hugo Smith, M.D.****, Chestnut Hill, associate dean of the School of Medicine; Dr. Marvin Wachman, president of Temple University; Mrs. Dorothy Halsey, Dr. Krumperman's sister; and sons Leroy, Jr., M.D., and Kurt.*

Albert P. Seltzer, M.D., Philadelphia, was recently honored by the dedication of the Dr. Albert P. Seltzer Ear, Nose, and Throat Clinic at St. Luke's and Children's Medical Center. Dr. Seltzer is emeritus professor of otorhinolaryngology at the University of Pennsylvania School of Medicine, emeritus chief of otorhinolaryngology at the Albert Einstein Medical Center, and chief of ear, nose, and throat and plastic surgery at St. Luke's and Children's Medical Center.

DR. SELTZER

DR. WHITE

Peter White, M.D., Philadelphia, was recently appointed director of Presbyterian Medical Center's 100-physician department of medicine. In addition to directing the professional and administrative activities of the department, Dr. White will work closely with the School of Medicine of the University of Pennsylvania in developing educational programs for medical students based at Presbyterian. Dr. White received his undergraduate degree from Yale University in 1951 and his medical degree from Penn four years later. He is a member of several professional associations, including the American Federation for Clinical Research and the American Society of Hematology, and he is a fellow of the American College of Physicians.

David Rosenthal, M.D., was recently named director of physical and rehabilitation medicine at Suburban General Hospital, East Norriton. Dr. Rosenthal is an assistant professor of rehabilitation medicine at Temple University School of Medicine.

Nino deProphetis, M.D., a surgeon for thirty years on the staffs of Crozer-Chester Medical Center, Upland, and Sacred Heart Hospital, Chester, was recently cited by the Christopher Columbus Memorial Association, Chester, for continuing service to the community. Dr. deProphetis was born in Arsita, Italy, and settled in Chester in the 1920s. His undergraduate and medical degrees were received from the University of Pennsylvania. He was the first chief of surgery at Sacred Heart Hospital and has served as a general surgeon at Riddle Hospital, Middletown, and Taylor Hospital, Ridley Park. Dr. deProphetis is a fellow of the American College of Surgeons and the American College of Physicians, and a diplomate of the American Board of Surgery.

The Philadelphia Society of Facial Plastic Surgeons recently elected a new slate of officers for 1977-78. They are: **Frank I. Marlowe, M.D., F.A.C.S.,** president; **Philip Rosenfeld, M.D., F.A.C.S.,** president elect; **Louis D. Lowry, M.D., F.A.C.S.,** vice president; **Fred J. Stucker, M.D., F.A.C.S.,** secretary; **Charles S. McConnel, M.D., F.A.C.S.,** treasurer; and **Emil P. Liebman, M.D., F.A.C.S.,** corresponding secretary.

A trip to the moon is the farthest thing from most people's minds. But for James Bagian, M.D., an intern at Geisinger Medical Center in Danville, such a trip just might take place. Dr. Bagian recently underwent physical tests at the National Aeronautics and Space Administration's Johnson Space Center in Houston to confirm his candidacy for a mission specialist position with the space shuttle program. The doctor's unusual qualifications may have spurred NASA's interest: in addition to his medical degree from Jefferson Medical College, Dr. Bagian received a bachelor of science degree in mechanical engineering from Drexel Institute of Technology and took part in a clinical rotation program with the Naval Air Test Center at Patuxent River, Maryland.

Brigadier General **John Boyd Coates, Jr., M.D.,** of Phoenixville, was recently installed as the 143rd president of the Chester County Medical Society. Other officers installed by the Society are: **Thomas S. Johnston, M.D.,** president elect; **E. Thomas Deutsch, M.D.,** vice president; **Norman A. Goldstein, M.D.,** secretary; and **Pascal J. Imperato, M.D.,** treasurer. **William A. Limberger, M.D.,** past president of the Pennsylvania and Chester County Medical Societies, was honored by the county society for his 50 years in medicine.

A Temple University Medical Center physician has been named the Woman Physician of the Year by the Polish American Medical Society "MEDICUS." **Irene Koprowska, M.D.,** Wynnewood, professor of pathology and director of the cytology laboratory at Temple, was chosen as the first recipient of the award in recognition of her lifetime contribution as a scientist, physician, and humanitarian. Dr. Koprowska, a graduate of the School of Medicine of Warsaw University, Poland, joined the staff of Temple University Medical Center in 1970 after serving as professor at Hahnemann Medical College.

William M. Cooper, M.D., has been appointed to the newly created post of assistant vice chancellor for continuing education in the School of the Health Professions at the University of Pittsburgh. Dr. Cooper became associated with the School of Medicine in 1948, and has since served as clinical professor of medicine, director of continuing education, and dean for continuing medical education. He has been director of continuing education at the University Health Center since 1974. Dr. Cooper was graduated from Hahnemann Medical College and received postgraduate medical training at Shadyside Hospital and the University of Pittsburgh School of Medicine. He is a member of the International Society of Hematology, the American Society of Hematology, and the American College of Physicians.

Cardilate® (erythrityl tetranitrate)
INDICATIONS: For the prophylaxis and long-term treatment of patients with frequent or recurrent anginal pain and reduced exercise tolerance associated with angina pectoris, rather than for the treatment of the acute attack of angina pectoris, since its onset is somewhat slower than that of nitroglycerin.

PRECAUTIONS: As with other effective nitrites, some fall in blood pressure may occur with large doses

Caution should be observed in administering the drug to patients with a history of recent cerebral hemorrhage, because of the vasodilation which occurs in the area. Although therapy permits more normal activity, the patient should not be allowed to misinterpret freedom from anginal attacks as a signal to drop all restrictions.

SIDE EFFECTS: No serious side effects have been reported. In sublingual therapy, a tingling sensation (like that of nitroglycerin) may some times be noted at the point of tablet contact with the mucous membrane. If objectionable, this may be mitigated by placing the tablet in the buccal pouch. As with nitroglycerin or other effective nitrites, temporary vascular headache may occur during the first few days of therapy. This can be controlled by temporary dosage reduction in order to allow adjustment of the cerebral hemodynamics to the initial marked cerebral vasodilation. These headaches usually disappear within one week of continuous therapy but may be minimized by the administration of analgesics.

Mild gastrointestinal disturbances occur occasionally with larger doses and may be controlled by reducing the dose temporarily.

HOW SUPPLIED: 10 mg chewable scored tablets, bottle of 100. Also 5, 10 and 15 mg oral/sublingual scored tablets in bottles of 100. 10 mg oral/sublingual scored tablets also supplied in bottles of 1,000.

Also available: Cardilate®-P brand Erythrityl Tetranitrate with Phenobarbital* Tablets (Scored).

(*Warning – may be habit-forming.)

Wellcome

Burroughs Wellcome Co.
Research Triangle Park
North Carolina 27709

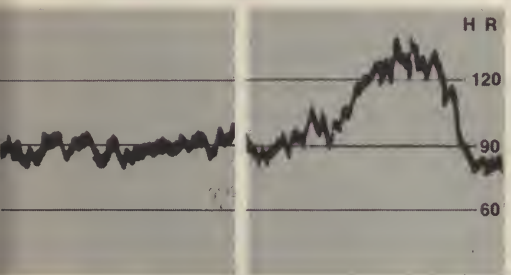
"**Our sex life is nil...**" A problem of the first magnitude to many post infarct patients and their mates...patients are often reluctant to broach the subject; physicians may frequently overlook its implications. This new 16mm film combines candid patient interviews with discussions by Drs. Herman Hellerstein, Thomas Hackett, Albert Kattus, Richard Stein, Carroll Witten and Lenore Zohman. Film and related monograph comprise 2 AAFP credit hours. To arrange viewing, write Burroughs Wellcome Co., Educational Services Department, Research Triangle Park, N.C. 27709 or contact your B.W. Co.® representative.

Sex and the heart patient:

A film every doctor should see.

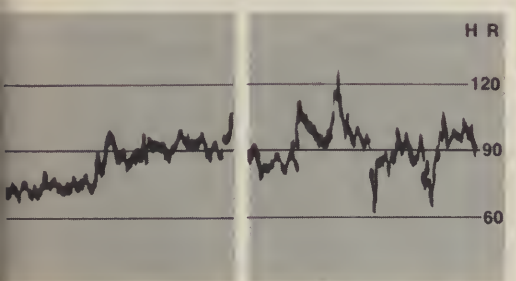
The energy cost of sex to the heart is relatively modest.
Over 80% of post-coronary patients can ultimately resume sexual activity without serious risk. Hellerstein and Freedman demonstrate that mean maximal heart rate during orgasm with spouse (as opposed to extra-marital sex) in 14 post-infarct patients is lower than that during usual occupational activity.

Representations below of actual EKG readings of an attorney, post MI, illustrate the point:



A. Working in office (about 90 beats/min)

B. Confrontation in judge's chamber (about 125 beats/min)



C. Pre-orgasm sex activity (about 90 beats/min)

D. Peaks at orgasm (120 beats/min)

Fear of pain greatest deterrent to post MI sex
In the multitude of MI patients with angina, pain is due to diminished coronary reserve and increased myocardial oxygen demand, precipitated by sex, other excitement and improper exercise. Anginal pain, however, can be relieved, and its recurrence mitigated.

Cardilate® (erythrityl tetranitrate) increases exercise tolerance.
Cardilate relieves anginal pain and prevents its recurrence, thereby allowing increased activity.
Commencing to work in as little as 2 to 5 minutes, Cardilate protects against recurrence of angina for at least 2 hours.

Available in both sublingual and chewable forms, Cardilate is a versatile, convenient agent to help make the angina patient's life more livable.

Cardilate®
(erythrityl tetranitrate)

Society backs AMA NHI plan, Dr. Blady testifies

State Society president John V. Blady, M.D., in October 12 testimony before the Region III HEW hearings on national health insurance in Philadelphia, called for equal access for all citizens to quality health care through a uniform and comprehensive health insurance plan.

In presenting the State Society's position, Dr. Blady outlined the benefits that should be included in such a plan:

- 365 days of hospital inpatient care;
- 100 days of inpatient care in a skilled nursing care facility;
- all emergency and outpatient services;
- all physician care (diagnostic, therapeutic, and preventive) regardless of where it is provided (in other health services);
- all home health services;
- all dental care for children;
- emergency dental care for everyone;
- ambulance service;
- institutional and outpatient psychiatric care;
- well-baby care;
- immunization;
- physical examinations;
- x-ray and laboratory services;
- anesthesiology services;
- continuity of coverage for those who change employment or become unemployed; and
- *protection against the cost of catastrophic illness without limit, the single most important need in the area of benefit coverage.*

Such an insurance program should rely on the private sector to the greatest extent possible, said Dr. Blady. "It is on this solid base of administrative and insurance expertise that a national health insurance plan should be implemented."

Financing and governmental control are also of concern to the Society, according to Dr. Blady. "Sound financing is a basic requirement for any national health insurance plan. The tendency of government health programs is to soar out of control. . . . To finance a plan . . . the federal government's role should be limited to paying premiums for the aged and persons unemployed or medically indigent.

"Protection against abuse should be built into the system so that the tendency to 'use it because it's free' is curbed. Coinsurance and deductibles are among the options available to restrict frivolous utilization.

"We must be realistic in projecting the cost of any national health insurance plan. . . . While efforts must be directed to implementing effective cost controls, the real problem has always been to achieve economies without compromising quality and erecting barriers to availability.

"Since it is difficult for the public to make judgments on the quality of care, physicians, as the patients' advocates, must have the responsibility to determine and maintain standards of quality health care in any health insurance plan . . . Controls . . . should be based on the principles of peer review of the PSRO law."

Dr. Blady endorsed HB-1818, the Comprehensive Health Care Insurance Act of 1977, but explained the restrictions of any national health plan.

". . . will this . . . or any other plan create a dramatic improvement in the health of Americans? The answer is no. Much of our health status is an individual responsibility.

". . . we must recognize that national health insurance is not a cure-all, but it can be a method by which everyone, regardless of income, will have access to quality medical care . . . and guaranteed protection against catastrophic medical costs."

JOHN V. BLADY, M.D., president of the Pennsylvania Medical Society, presented testimony on national health insurance at a hearing in Philadelphia October 12. The hearing was one of a series conducted by the Department of Health, Education, and Welfare throughout the nation. Later in October, the Society's House of Delegates reaffirmed the Society's position of support for the plan backed by the American Medical Association.

State societies hold fall meetings; officers elected

Three state societies held meetings in recent weeks. Scientific programs and business sessions were on the agendas.

Psychiatric Society

Members of the Pennsylvania Psychiatric Society attended the society's fall meeting on October 21 in Lancaster.

The one-day program, entitled "Mental Health Under the Carter Administration," included a presentation by Mildred Mitchell-Bateman, M.D., a member of the President's Commission on Mental Health.

Following Dr. Mitchell-Bateman's overview of the current workings of the Commission, a simulated public hearing of the Commission was held. Participants then divided into small group discussions on areas of interest ranging from delivery of services to special population needs.

The meeting concluded with a summation of the individual activities of the small groups and a perspective by Dr. Mitchell-Bateman.

Neurosurgical Society

The Pennsylvania Neurosurgical Society's fall meeting was held in conjunction with the scientific meeting of the Mid-Atlantic Neurosurgical Society on November 4 in Philadelphia. Specialists heard presentations by nationally respected leaders in neurosurgery and were given opportunity for group discussions on the procedures presented.

The membership of the Pennsylvania society also elected its officers for the coming year. They are: James Argires, M.D., president; R. G. Selker, M.D., president elect; M. R. Katz, M.D., secretary/treasurer; and councilors William Bouzarth, M.D., Arthur B. King, M.D., and Laibe A. Kessler, M.D. Officers assumed their responsibilities at the conclusion of the meeting.

College of Nuclear Medicine

The annual meeting of the Pennsylvania College of Nuclear Medicine was held on Saturday, October 22, 1977. Edward A. Eikman, M.D., chief of the Nuclear Medicine Service, Veterans Administration Hospital, Tampa, Florida, spoke on the quality assurance and practice certification program of the American College of Nuclear Physicians. Dr. Eikman's presentation was followed by a discussion of the ramifications of such a program.

The membership was advised of the results of the elections of officers for 1977-78. New officers are: Jose O. Morales, M.D., president (incumbent); Michael Dooley, M.D., vice president; David Brill, M.D., secretary; and Milton Friedlander, M.D., treasurer.

NBC plans medical 'supershow'

"Medicine in America" is the topic of a three-and-a-half hour television presentation scheduled for broadcast by NBC at 8 p.m. Wednesday, January 4.

The program will be telecast on the following stations: KYW-TV Philadelphia; WBRE-TV Wilkes-Barre; WGAL-TV Lancaster; WIIC-TV Pittsburgh; WICV-TV Erie; and WJAC-TV Johnstown.

The economics and quality of medical care will be the central concern of the special.

THREE LEVELS of Auxiliary leadership—county, state, and national—participated in the annual meeting of the Pennsylvania Medical Society Auxiliary in Lancaster October 24-26. Shown above, left to right, are: Mrs. William R. A. Boben, who was installed as president; Mrs. C. Edward Pohl, who welcomed officials on behalf of the Lancaster County Auxiliary; Mrs. Spencer J. Servoss, Auxiliary immediate past president; and Mrs. Chester L. Young, president of the AMA Auxiliary.

Joint practice commission publishes case book

Physicians and nurses who are now collaborating as colleagues to provide patient care have revealed their personal and professional lives in a book of short narratives published by the National Joint Practice Commission (NJPC), an interprofessional organization established by the American Medical Association and the American Nurses Association.

As evidenced by the 24 case studies presented in the volume, entitled *Together: A Casebook of Joint Practices in Primary Care*, the emergence of the nurse practitioner as a primary nursing care provider has added a new dimension to the traditional physician-nurse relationship.

The physicians and nurses depicted in the book have gone into joint practice in the belief that real and significant benefits would accrue to the patients and to their professional practices, and proof of these benefits is to be found in each case.

In *Together*, nurse practitioners are shown working in expanded roles with physician colleagues; both nurses and physicians are exploring the boundaries of team practice. Several positive results are seen throughout the book:

- Patient satisfaction increases and waiting time is shortened.
- Malpractice suits seem to decrease.
- The size of the practice can increase while quality of care is maintained.
- The practice achieves a balance because of joint decision making and well-defined roles.
- Nurses' and physicians' clinical judgments are sought by patients and shared in the joint practice effort.
- Overlapping functions occur but are positive, noninterfering factors.
- Health education services provided by the nurse practitioner permit the physician to spend more time in medical practice.

The future of an expanded role for nurse practitioners also is illustrated in the book. Nurses are shown treating nonacute illnesses, making rounds or visiting patients in hospitals and nursing homes, providing life saving care and treatment in crisis situations, teaching patients and their families about health care, and collaborating with physicians.

One case of particular interest to Pennsylvania doctors is "Something New In Williamsport," the story of how the typical rural problem of finding new physicians to take the place of those who retire was solved in Lycoming County by establishing a residency program in family practice at Williamsport Hospital.

Arthur Taylor, M.D., a local physician, was anxious to begin the training program, but found that in order to manage the increased demands on his time, he would have to change his concept of health care delivery.

He was aware that the Pennsylvania Nurse Practice Act permitted nurses with more than conventional training to perform certain tasks previously confined to physicians. So he recruited a nurse practitioner, partly to free himself, but also to serve as a role model for the young physicians who soon would be coming through the program.

Dr. Taylor's search for a nurse practitioner resulted in his association with Wanda Hendershot, a former staff nurse, practical nursing teacher, and clinical instructor.

In the office, patients are seen by either Doctor Taylor or Ms. Hendershot, often at random. "We consider ourselves a team," she says, "and any one of the team members may see the patient on any given visit. We don't feel we are fragmenting care, because we communicate regularly with one another."

Doctor Taylor agrees. "She knows my routine," he says. "After Wanda examines a patient, if she feels he needs a cardiogram, a chest x-ray, or blood tests for me to make a diagnosis, she will order them. When it come to therapy, we put our heads together."

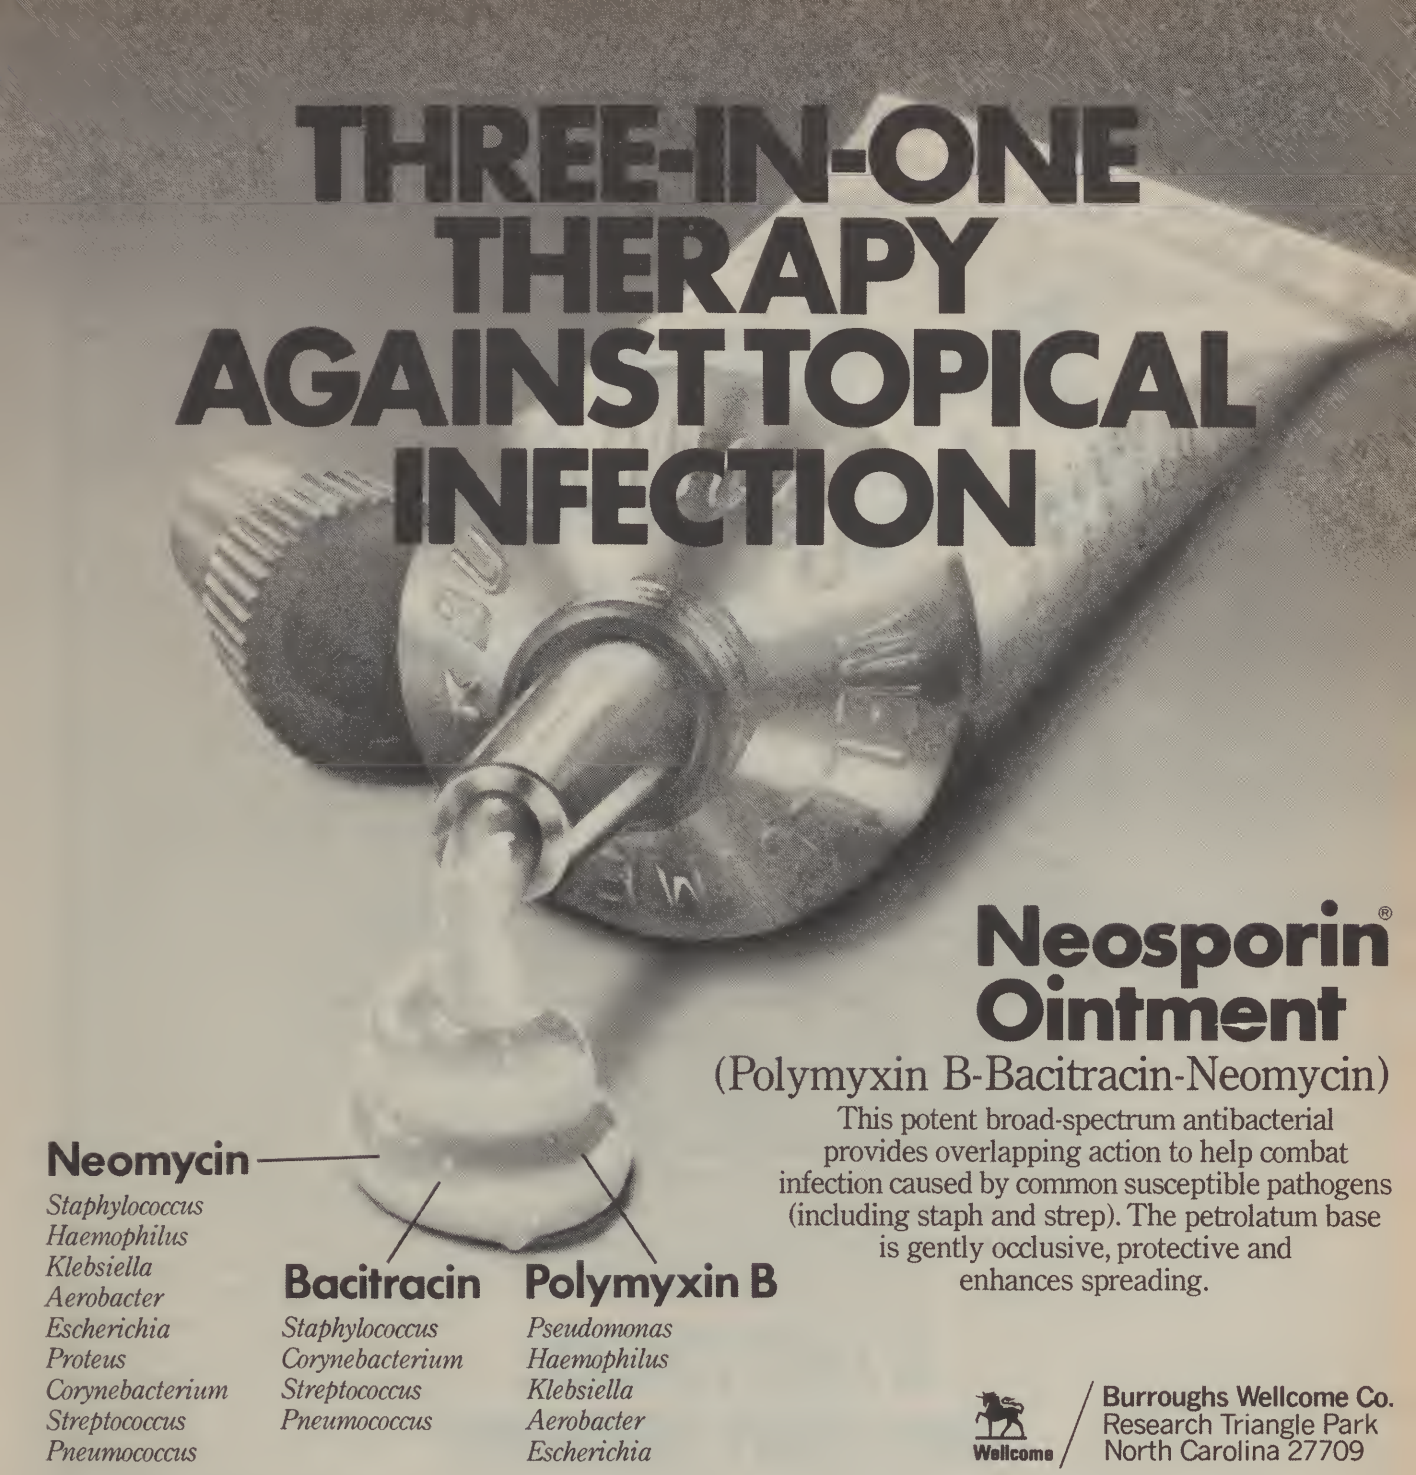
Doctor Taylor discovered one bonus of his collaboration with a nurse practitioner was being able to have her make visits away from the office. "I haven't been to a nursing home in nearly a year. Wanda visits my nursing home patients, then comes back and reports to me. We are able to make occasional house calls too."

The nurse practitioner concept has become increasingly acceptable to the young new doctors rotating through Williamsport Hospital. One of these is Leo M. Hartz, M.D., a junior resident who grew up in eastern Pennsylvania. "We came out of medical school with the idea that the doctor didn't necessarily have to spend time with all of the patients in his practice in order to give quality medical care. A physician's services can be extended by others . . . as long as they are well trained, they can be of great help. . . . there's a consensus among the residents that we would have a nurse practitioner—either formally trained or someone we trained ourselves—working with our patients."

Grants from The Robert Wood Johnson Foundation to prepare the manuscript and publish it enabled the NJPC to launch the first national investigation into where and how joint practices exist and function in primary care settings.

The 258-page book is available at $5.95 from NJPC/EFIC, 7383 Lincoln Ave., Chicago, IL 60646.

THREE-IN-ONE THERAPY AGAINST TOPICAL INFECTION



Neosporin® Ointment

(Polymyxin B-Bacitracin-Neomycin)

This potent broad-spectrum antibacterial provides overlapping action to help combat infection caused by common susceptible pathogens (including staph and strep). The petrolatum base is gently occlusive, protective and enhances spreading.

Neomycin

Staphylococcus
Haemophilus
Klebsiella
Aerobacter
Escherichia
Proteus
Corynebacterium
Streptococcus
Pneumococcus

Bacitracin

Staphylococcus
Corynebacterium
Streptococcus
Pneumococcus

Polymyxin B

Pseudomonas
Haemophilus
Klebsiella
Aerobacter
Escherichia

In vitro overlapping antibacterial action of Neosporin® Ointment (polymyxin B-bacitracin-neomycin).

Wellcome

Burroughs Wellcome Co.
Research Triangle Park
North Carolina 27709

Neosporin® Ointment

(Polymyxin B-Bacitracin-Neomycin)

Each gram contains: Aerosporin* brand Polymyxin B Sulfate 5,000 units; zinc bacitracin 400 units; neomycin sulfate 5 mg (equivalent to 3.5 mg neomycin base); special white petrolatum qs, in tubes of 1 oz and 1/2 oz and 1/32 oz (approx.) foil packets.

WARNING: Because of the potential hazard of nephrotoxicity and ototoxicity due to neomycin, care should be exercised when using this product in treating extensive burns, trophic ulceration and other extensive conditions where absorption of neomycin is possible. In burns where more than 20 percent of the body surface is affected, especially if the patient has impaired renal function or is receiving other aminoglycoside antibiotics concurrently, not more than one application a day is recommended.

When using neomycin-containing products to control secondary infection in the chronic dermatoses, it should be borne in mind that the skin is more liable to become sensitized to many substances, including neomycin. The manifestation of sensitization to neomycin is usually a low grade reddening with swelling, dry scaling and itching; it may be manifest simply as failure to heal. During long-term use of neomycin-containing products, periodic examination for such signs is advisable and the patient should be told to discontinue the product if they are observed. These symptoms regress quickly on withdrawing the medication. Neomycin-containing applications should be avoided for that patient thereafter.

PRECAUTIONS: As with other antibacterial preparations, prolonged use may result in overgrowth of nonsusceptible organisms, including fungi. Appropriate measures should be taken if this occurs.

ADVERSE REACTIONS: Neomycin is a not uncommon cutaneous sensitizer. Articles in the current literature indicate an increase in the prevalence of persons allergic to neomycin. Ototoxicity and nephrotoxicity have been reported (see Warning section).

Complete literature available on request from Professional Services Dept. PML.

Practice where the big premium is on medical care.

Not on high overhead. Or paperwork. Or any of the other hassles that keep chipping away at your clinical time.

If you want more out of your medical career, consider what the Navy can offer. A ready-made practice where patients' medical care is independent of the fluctuations of the economy. An engaging life-style. Adventure. Travel. And as much as $30,000 to $40,000 a year to start.

This year the Navy needs General Practitioners for the Flight Surgeon program, for Undersea Medicine, and as General Medical Officers. We also need specialists in Anesthesiology, Family Practice, Psychiatry, Internal Medicine, Neurology, Radiology, Pathology, and Pediatrics. If your interests lie in any of these clinical areas, and you'd like to get back to pure medicine, the Navy is for you. Get all the facts from your local Navy medical recruiter.

Fewer than 200 physicians are needed, so don't delay.

IT PAYS TO LOOK INTO NAVY MEDICINE

Case report

Management of vascular injury

GARY G. NICHOLAS, M.D., F.A.C.S.
WILLIAM E. DeMUTH, M.D., F.A.C.S.

Hershey

Vascular trauma presents a unique opportunity to the surgeon. He is most commonly presented with a young patient who, until the moment of injury, had a normal vascular system. The immediate diagnosis and aggressive management of vascular injuries increases the number of successful reparative operations. In one series, delay in treatment of 12 hours or more led to a successful reconstruction in 50 percent of cases; reconstruction succeeded in 90 percent of cases when performed within 6 hours of injury.

Prompt management of acute vascular injuries prevents disabling, limb threatening late sequelae, such as false aneurysms, arteriovenous fistula, and chronic ischemia. When caring for a patient with an acute vascular injury, the order of priority must be: resuscitation of the patient, attention to salvage of the injured limb and, finally, restoration of the injured limb to normal.

The following case report illustrates a number of the problems encountered in caring for patients with major arterial trauma.

Case report

S.B. (HMC #104688) is a 23 year old female, gravida 3, para 2, who was seven months pregnant when she was transferred to the Hershey Medical Center nine hours after having been shot through both knees with a 30/30 rifle.

The high velocity missile that injured the patient's legs caused massive tissue loss. She was hypovolemic with a blood pressure of 98/60, a pulse of 116, and fetal heart rate of 160. The left foot and leg were pale white in color and cool to the touch. The right foot was cool and pedal pulses were initially unobtainable, but returned with volume expansion. The wound in the left popliteal space was approximately 12 x 15 cm. The skin, subcutaneous tissue, and muscle were absent and the borders of the wound were devitalized. An 8 cm segment of the popliteal artery, vein, and nerve was absent.

The patient was taken directly to the operating room. The saphenous vein obtained from the opposite leg was used as an interposition graft to repair both the popliteal artery and the vein. Nerve ends were marked with silk suture. The wound was widely debrided and vascular grafts were covered with the one remaining head of the gastrocnemius muscle, which was transferred from the lateral to medial femoral condyle. Fasciotomy was performed to decompress all compartments of the right calf. No skin closure was attempted.

A posterior tibial pulse was reestablished. The wound of the other popliteal space was debrided and allowed to remain open. Secondary wound closure was accomplished four days later using split thickness skin grafts.

The patient was fitted with a left short leg brace for treatment of her foot drop. When discharged three weeks after her injury, she was ambulating without difficulty.

Dr. Nicholas is an associate professor in the department of surgery at The Milton S. Hershey Medical Center of The Pennsylvania State University, Hershey. Dr. DeMuth is a professor of surgery in the department.

Comment

Coverage of any vascular graft is imperative; in this instance the gastrocnemius muscle was used. Aggressive debridement and secondary closure are the two principles that aid in prevention of infection. Clinical and laboratory evidence indicates that venous reconstruction rather than ligation improves the success rate of arterial reconstruction. Fasciotomy is necessary in over half of patients with popliteal vascular injuries; it should be performed without hesitation if swelling is present.

The diagnosis of acute arterial injury may be all too obvious or very subtle. A large, soft tissue defect in the vicinity of a major artery associated with bright red bleeding permits rapid diagnosis of arterial injury. In other instances, the diagnosis may be made only by the angiographic finding of a

small defect in a vessel wall. Ischemia of the affected part distal to the site of injury is a common diagnostic finding. Cadaveric pallor and pain suggest acute limb threatening ischemia.

Pulses distal to the site of injury are usually absent but as many as 20 percent of patients may have pulses distal to an area of major arterial trauma. A large, tense hematoma may reflect underlying arterial injury. Pulsation of a hematoma, especially in combination with a palpable thrill or audible bruit, is evidence of arterial trauma.

In some patients a high index of suspicion will prompt the physician to obtain an angiogram and make the correct diagnosis even when the clinical signs of arterial injury are absent. Physicians should suspect arterial injury when evaluating a patient with a fracture of the first rib, a dislocation of the knee, or a supracondylar fracture of the humerus or femur.

Vascular injury may occur following penetrating or blunt trauma. In penetrating injuries from high velocity missiles, such as rifle bullets, the vessels may be injured by direct penetration or by the kinetic energy released as the missile passes through tissues adjacent to the vessel. Because of the extensive tissue injury surrounding the path of a high velocity missile, interposition grafting is much more common in vascular injuries resulting from military weapons of high velocity. In civilian practice over 80 percent of arterial injuries can be managed by end-to-end anastomosis.

Blunt vascular injury most frequently results in compression or contusion of the vessel. Compression is usually of minor consequence unless the pressure is severe and prolonged, in which case distal intravascular thrombosis may occur. Contusion typically results in disruption of the intima and a portion of the media of the vessel wall. The disrupted portion of vessel wall will usually prolapse into the vessel lumen and initiate local thrombosis in the vessel.

The initial management of the patient with a major vascular injury must be directed to resuscitation when shock is present. Over half of patients with arterial injuries will be in shock when first seen. Large bore intravenous catheters should be placed in noninjured extremities to allow infusion of balanced salt solution and whole blood. High dose intravenous antibiotics and tetanus toxoid should be given immediately. The specific method of management will obviously depend on the site of injury.

Ninety percent of acute arterial injuries occur in the extremities. Hemorrhage is best controlled by direct pressure. Tourniquets are dangerous and may precipitate the loss of a previously salvageable limb. Associated fractures should be reduced and splinted. Frequently this will restore normal circulation to what appeared to be an ischemic limb.

Vascular injuries in the neck are complicated by the possible compromise of the airway. External hemorrhage is managed by direct pressure and if any sign of airway obstruction is noted, endotracheal intubation is performed.

Major vascular injuries within the abdominal cavity may be initially controlled by the use of the antigravity suit. Immediate operation is essential if shock is present. Patients with injuries of the thoracic aorta will frequently exhibit a transient stability of the cardiovascular system. During this stable period, hemorrhage is generally confined to the mediastinum. Rapid diagnosis is essential if these patients are to reach the operating room prior to free rupture of the expanding hematoma into the hemithorax.

Avoidance of delay in diagnosis of acute arterial injuries allows the surgeon the best opportunity to perform a successful vascular reconstruction. If shock is present or the site of arterial injury obvious, one should not delay life and limb saving treatment to obtain angiographic confirmation. In those cases in which the diagnosis is in doubt because of lack of clinical signs, but a high index of suspicion exists, angiography should be performed. If this aggressive policy is followed, mortalities may be kept to a minimum and late complications of vascular injuries can be avoided. □

consider the effect on coexisting diabetes when you prescribe a vasodilator*

(POSTERIOR VIEW OF PANCREAS)

no interference in the management of the diabetic patient has been reported with

VASODILAN®
(ISOXSUPRINE HCl)

the compatible vasodilator TABLETS, 20 mg.

***Indications:** Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg. Vasodilan injection, isoxsuprine HCl, 5 mg., per ml.

Dosage and Administration: Oral: 10 to 20 mg., three or four times daily. Intramuscular: 5 to 10 mg.(1 or 2 ml.) two or three times daily. Intramuscular administration may be used initially in severe or acute conditions.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Parenteral administration is not recommended in the presence of hypotension or tachycardia.

Intravenous administration should not be given because of increased likelihood of side effects.

Adverse Reactions: On rare occasions oral administration of the drug has been associated in time with the occurrence of hypotension, tachycardia, nausea, vomiting, dizziness, abdominal distress, and severe rash. If rash appears the drug should be discontinued.

Although available evidence suggests a temporal association of these reactions with isoxsuprine, a causal relationship can be neither confirmed nor refuted.

Administration of single dose of 10 mg. intramuscularly may result in hypotension and tachycardia. These symptoms are more pronounced in higher doses. For these reasons single intramuscular doses exceeding 10 mg. are not recommended. Repeated administration of 5 to 10 mg. intramuscularly at suitable intervals may be employed.

Supplied: Tablets, 10 mg., bottles of 100, 1000, 5000 and Unit Dose; Tablets, 20 mg., bottles of 100, 500, 1000, 5000 and Unit Dose; Injection, 10 mg. per 2 ml. ampul, box of six 2 ml. ampuls.

Know your taxes

Planning means heirs share estate, not government

DONALD L. DeMUTH, M.B.A., C.P.A.
JOHN M. JONES, M.B.A., J.D.
EDWARD H. ACHORN, M.Adm., C.P.A.
Harrisburg

"There appears to be a growing feeling among knowledgeable associates of Howard R. Hughes that the eccentric billionaire left no will to guide the disposal of his great estate. In Washington today, a federal tax expert said that more than three quarters of Mr. Hughes' estate would go for federal taxes if no will had been left. The current size of his holdings is estimated at $1.5 billion, and the tax bill would be well above $1 billion." (*New York Times*, April 7, 1976, page 1.)

Often a physician will notice such headline news, vow to review his estate with an advisor, and then fail to honor his pledge.

Why doesn't he secure estate planning advice? No one likes to anticipate his own death and, because no direct benefit results, it is often easy to shrug off estate planning with, "There will be plenty for them when I'm gone." This is often, but not always, true.

An astonishing number of doctors go to great lengths to save several hundred or thousand dollars in income tax, but do not make even a simple effort to save tens of thousands of dollars in estate tax.

Estate taxation is probably the most misunderstood form of taxation. Federal estate tax is levied on the transfer of the decedent's property and is paid by his estate. Inheritance (state) tax, which is often confused with estate tax, is paid by the recipients of the decedent's property and is typically much smaller.

The difference between *probate* estate and *taxable* estate is also commonly misunderstood. Probate estate includes only property which is transferred at death by a will. It does not include proceeds of life insurance policies owned by the decedent or property held in trusts over which he held power.

Taxable estate includes all property that is owned or any property to which he has right or interest. Thus owned life insurance policy proceeds and trusts with retained powers are taxable. In estate taxation, it is the taxable estate that is important.

Items that are taxed for estate purposes include:

- **cash (including savings and checking accounts and certificates of deposit);**
- **home and vacation residences (even if jointly owned);**
- **stocks and bonds;**
- **office (if owned);**
- **investment real estate;**
- **objects of art;**
- **coin and stamp collections;**
- **antiques;**
- **partnership or business interests;**
- **property in certain trusts;**
- **life insurance proceeds (if you or your estate is either beneficiary or owner);**
- **certain pensions and annuities;**
- **property held as a joint tenant; and**
- **gifts made within three years of death.**

Many of these items are understandably taxed as part of an estate, but let's consider those which are not quite so obvious.

I thought property jointly owned by my wife and me, joint bank accounts and our home, was half owned by each and only half would be included in each estate.

False. The person who earned or inherited the property or earned the money used to acquire the property is the owner for purposes of estate taxation. For example, if a physician buys a home, makes mortgage payments, and places all practice earnings in a joint bank account, both the home and the money are taxed in his estate. This is true despite the fact that the home and the bank accounts are jointly owned by the physician and his spouse.

An important exception to this rule resulted from the Tax Reform Act of 1976. If the physician gives the spouse one-half the jointly owned property for which he paid the entire amount and then files a gift tax return, he can effectively include half the property in his estate and half the property in his spouse's estate. This may be especially beneficial in the case of real estate. Half the home, for example, may be transferred to the spouse before it appreciates, probably without involving a gift tax resulting from the transfer.

One caveat for effective transfer of real estate for estate tax benefit is a complex legal arrangement costing a few hundred dollars in legal fees and transfer costs. A physician should not proceed with the transfer until an attorney or consultant knowledgeable in gift and estate taxation matters reviews the situation and advises accordingly.

I thought that when I put property in trust it no longer belonged to me. How can this property be taxed to me?

If a physician makes an irrevocable trust (a trust which cannot be altered by the person who created it) and he is

Mr. DeMuth is assistant professor of accounting and finance, Mr. Jones is assistant professor of business law and insurance, and Mr. Achorn is assistant professor of accounting and management at The Pennsylvania State University's Capitol Campus, Middletown.

not the trustee, then the assets of that trust are not included in his estate.

If the trust is revocable (giving the doctor the power to terminate, control or manage the trust and to change beneficiaries), assets are included in the physician's taxable estate upon his death.

Do you mean to say that if I make gifts within three years of my death, they will not only be taxed in my estate at their market value at the time of my death, but the gift taxes I paid will also be included?

Yes. The IRS assumes that any gift within three years of death is "in contemplation of death," i.e., the motive for making the gift is to avoid estate taxation. Thus the value of the gift at the time of death (not on the date of receipt) is taxed.

The physician may make a gift of $3,000 per year ($6,000 if married and giving jointly with spouse) to each recipient without limit and without including the gifts in his estate. A married doctor with four children, for example, could give to each child (or any other person) $6,000 annually for a total of $24,000 among the four children. The amount of these gifts is not included in his estate.

While the amount of gift tax paid is included in the estate for tax purposes, it is subtracted from the doctor's estate tax to determine the amount of tax actually payable. The purpose of this is to push the physician into a higher estate tax bracket.

What do you mean the life insurance proceeds are included in my estate if I'm the owner or my estate is the beneficiary? My wife is the beneficiary. The money will go straight to her!

While it is true that life insurance proceeds are paid directly to the named beneficiary, the proceeds are included in the estate for taxation purposes. A life insurance trust can be used to avoid estate taxation of life insurance proceeds. Such proceeds are not subject to income taxation.

What pensions and annuities are included in my estate? How can I avoid being taxed?

Qualified pension and profit sharing plans of professional corporations and Keogh plans and individual retirement accounts of unincorporated practices that are distributed in installments escape estate taxation.

When distributed in lump sums these accounts are included in the estate for estate taxation purposes, but qualify for a favorable ten year forward average income taxation of the lump sum to the recipient of the retirement benefits.

To achieve the best combination of estate and income taxation savings the physician should name a beneficiary other than his estate or executor for his retirement and profit sharing plans. The beneficiary should be permitted to choose lump sum or installment payments and should be encouraged to consult an attorney or advisor to determine the most advantageous method of receiving payments from a taxation standpoint.

What steps can I take to reduce the tax on my estate?

Small estates—In 1977 any estate of $120,000 or less will avoid estate taxation no matter who inherits the property. The amount escaping estate taxation increases each year until 1981 when it is in excess of $175,000.

In addition to the $175,000, the physician may give his spouse the greater of $250,000 or one-half the gross estate (taxable estate before deductions) and pay no estate tax. This does not solve all estate planning problems, however, for the spouse would owe $83,000 of estate tax upon her death, assuming that she didn't remarry and spent only the earnings of the estate.

Marital deduction and residuary trusts—A common method of reducing the estate tax on both estates is for the doctor to place half of his estate in a trust to which his spouse is beneficiary and from which she may receive income and principal at his death. This is called a marital deduction trust.

Instead of placing the property in a marital deduction trust, he may obtain identical tax results by giving the property directly to his spouse and the remaining portion to another trust. The remainder of the trust, known as a residuary "sprinkling" trust, passes to the children upon the spouse's death or remains in trust until the children attain a specified age. The trustee is empowered to distribute the income and principal among the spouse and children at his discretion.

Table I compares the total estate tax paid by each method.

The marital deduction and residuary trusts are often beneficial for young or middle aged physicians with taxable estates over $175,000 whose wives have no substantial property or cash.

Reduced joint tax—A recent legal decision of particular interest to the older or retired physician involves a clause designed to permit an estate to pass to a spouse in the amount which would cause joint estate taxes to be as small as possible. To explore the applicability of such a clause to the individual situation, the physician should refer his attorney to *Smith*, 66 TC No. 42 (1976).

Orphan's exclusion—If a physician's children lose both parents and

TABLE I
Comparison of Estate Taxes with Direct Bequeathal and with Trusts*

Estate tax	Taxable estate	Federal estate tax		
		Physician	Spouse	Total
Bequeathed	$200,000	None	$ 8,000	$ 8,000
directly	250,000	None	24,000	24,000
to spouse	300,000	None	41,000	41,000
	350,000	None	58,000	58,000
	400,000	None	75,000	75,000
	450,000	$ 5,000	90,000	95,000
	500,000	17,000	103,000	120,000
½ to	$200,000	None	None	None
marital deduction	250,000	None	None	None
trust or directly	300,000	None	None	None
to spouse and	350,000	None	None	None
½ to residuary trust	400,000	$ 8,000	$ 5,000	$13,000
	450,000	16,000	11,000	27,000
	500,000	24,000	16,000	40,000

* Assumes death in 1981 or later.

he provides for it in his will, the doctor may exclude $5,000 for each year that each child is under 21 if the children or a trust for their benefit receives the property. If the children are 10 and 12 when orphaned, for example, the 10 year old could receive $55,000 (11 years until 21 × $5,000 exclusion) and the 12 year old could receive $45,000 (9 years × $5,000) tax free.

Charitable deduction—Gifts to charitable organizations are exempt from estate taxation.

Noncharitable gifts—A physician may give $3,000 annually per person (or $6,000 if joint gifts) without gift tax or estate tax ramifications. If gifts are made in excess of $3,000 per person each year ($6,000 for joint gifts), he reduces the amount of property that can be bequeathed without paying estate tax. If the physician gives over $120,000 in 1977, increasing to $175,000 in 1981, he currently will be taxed on these gifts.

Why should the physician consider making gifts before his death? There are several good reasons: (1) any future appreciation of the gift is removed from the physician's estate; (2) if the gift is made to someone in a lower income tax bracket, appreciation of the property is taxed at the lower rate; and (3) if the gifts are taxed, the gift tax paid is not included in the doctor's estate if he dies more than three years after the gift is made.

From a taxation viewpoint good gifts are items which have little or no income but good possibility for price appreciation. Such gifts include low income growth stocks and objects of art.

Bad gifts are stocks selling at less than purchase price, installment obligations owned by the doctor, and property on which investment credit has been taken and is still subject to recapture. The doctor should discuss all possibilities with his advisor before making a gift.

Gifts to minors—Many physicians choose to give cash, securities, or other property to their minor children or grandchildren in order to remove the property from taxable estate and have the earnings of the property taxed to the minors. The most common methods to accomplish this are Uniform Gifts to Minors and trusts.

The Uniform Gifts to Minors Act is typically used to make a gift of cash in savings accounts or securities to children or grandchildren. No legal work is involved and the physician need only instruct the bank teller or stockbroker to make the gift and the act will be completed. Several important points should be remembered: (1) the physician cannot renege on the gift; (2) the minor must receive the income and principal by the time he reaches 21 for the income to be taxed to the minor; and (3) the spouse rather than the doctor should be the custodian of the gift to avoid estate taxation should the physician die before the minor has absolute control of the gift.

To keep the income out of his income tax bracket and the gift out of his taxable estate, the physician may create a gift to a trust for the benefit of a minor which the minor must receive or have the right to demand. Trust income may be held in the trust until the minor turns 21. Income is still taxed to the minor in the year earned.

A joint bank account with a minor does not constitute a gift because the income and principal belong to the physician in the eyes of the IRS. There is no gift until the minor withdraws the money.

Life insurance trust—We have mentioned that a life insurance trust may be used to eliminate the proceeds of life insurance policies from the physician's taxable estate. If the physician is the owner or beneficiary or his estate is beneficiary of the life insurance policies, the proceeds are included in his estate for tax purposes. Because life insurance proceeds are often a significant portion of a doctor's estate, he may wish to create an irrevocable trust to own his life insurance policies.

The primary advantages of such a trust are:

- Life insurance proceeds are not included in taxable estate, nor are they part of the spouse's estate if the trust is owner and beneficiary.
- Attorney's fees are often based on a percentage of property passing through a will. Property in an *existing* trust (e.g., life insurance proceeds) does not pass through a will.
- Property passing through a will is public information. Details of trust property are not subject to such scrutiny.
- Only the insurance premium is a gift. If the cash value in a whole life

At last! A purchasing agent for every medical office.

How do you know you're getting the best price for the supplies you use in your medical office? You could make a price comparison check with all your local suppliers, or you could ask each supplier to bid on the supplies you need; both of which would be extremely time-consuming for you and your office staff. We've got a better idea . . . . . call on the Pennsylvania Medical Cooperative.

The Pennsylvania Medical Cooperative was formed with the sole purpose of being the purchasing agent for every Pennsylvania physician. In fact, it is owned and operated by the physicians who use it to insure that it meets this goal.

Pennsylvania Medical Cooperative is a full service supply house offering low cost on all medical supplies, office equipment, and practically everything you would need to run an efficient medical practice.

By using the Co-op you can be assured of getting the best all around price for your office needs. Yes, you may be able to find a lower price on one or two items from a competitor, but the Co-op consistenly offers lower prices on all items . . . . . and that's a fact!

If you are not using the Pennsylvania Medical Cooperative as your full time purchasing agent, don't you think you should? Call now for details on how you can be a part of this unique, first of its kind medical supply operation in the country.

insurance policy is sizable, the physician may choose to borrow the cash value and give the policy to the trust.

• The assets passing through a will may be placed in the life insurance trust, which acts as a "pour over" trust created for the same purpose.

The chief disadvantage of creating an irrevocable life insurance trust is that it cannot be amended, altered, or revoked. Even when divorced the physician cannot remove his former spouse from beneficiary status. He may stop paying premiums, but to change beneficiaries he must buy a new (and probably costlier) life insurance policy and create a new trust.

Flower bonds—For the elderly or terminally ill who have taxable estates, "flower bonds" are an excellent device to save estate tax. The US Treasury issues certain bonds which can be redeemed at maturity rather than market value to satisfy federal estate tax.

As an example, it is now possible to buy Treasury bonds with a 1990 maturity value of $10,000 and a 3½ percent coupon interest rate for $7,700. If the bond owner dies, his estate can use the bonds, which cost $7,700, to pay $10,000 of estate tax.

The estate must pay capital gains tax on the difference between the redemption value and the cost. In addition, all flower bonds yield significantly less interest than investments of comparable risk and thus should not be considered by healthy young and middle aged practitioners.

Other considerations—Partnerships and incorporated groups should be certain that a buy-sell agreement is made when all members are healthy and on good terms. From an estate planning viewpoint, it is important that the agreement is effective at all times.

Because estate planning efforts are made most often for the benefit of the spouse, she should be aware of the location of important documents. Table II lists items with which the beneficiary should be familiar.

The physician who carefully coordinates his estate planning efforts with his attorney and advisors will assure that his intentions are carried out and that his heirs—not Uncle Sam—will benefit from his estate. □

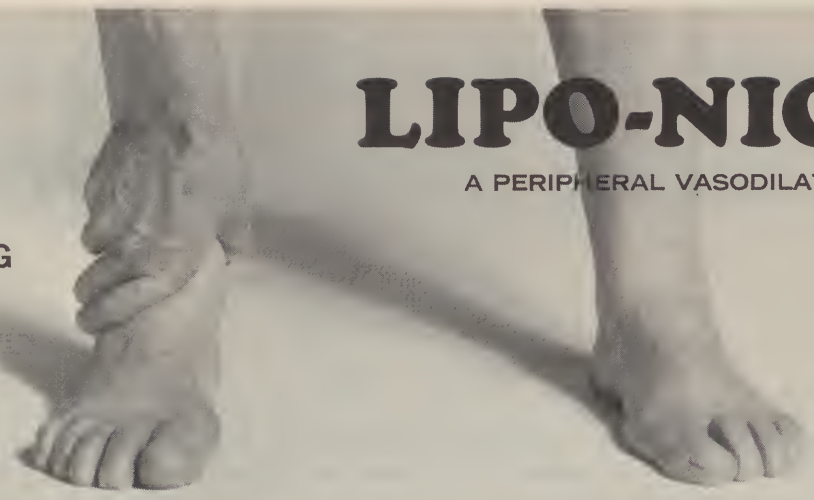
LEG CRAMPS
TINNITUS
DISCOMFORT ON STANDING



LIPO-NICIN

A PERIPHERAL VASODILATOR

IMMEDIATE or GRADUAL

nicotinic acid therapy

IMMEDIATE RELEASE

LIPO-NICIN/100 mg.
Each blue tablet contains:
Nicotinic Acid .....100 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 5 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

LIPO-NICIN/250 mg.
Each yellow tablet contains:
Nicotinic Acid .....250 mg.
Niacinamide ..... 75 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (B-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500, 1000.

GRADUAL RELEASE

LIPO-NICIN/300 mg.
Each time-release capsule contains:
Nicotinic Acid .....300 mg.
Ascorbic Acid .....150 mg.
Thiamine HCL (H-1) .. 25 mg.
Riboflavin (B-2) ..... 2 mg.
Pyridoxine HCL (B-6).. 10 mg.
In a special base of prolonged therapeutic effect.
DOSE: 1 to 3 tablets daily.
AVAILABLE: Bottles of 100, 500.

Indications: For use as a vasodilator in the symptoms of cold feet, leg cramps, dizziness, memory loss or tinnitus when associated with impaired peripheral circulation. Also provides concomitant administration of the listed vitamins. The warm tingling flush which may follow each dose of LIPO-NICIN 100 mg. or 250 mg. is one of the therapeutic effects that often produce psychological benefits to the patient. **Side Effects:** Transient flushing and feeling of warmth seldom require discontinuation of the drug. Transient headache, itching and tingling, skin rash, allergies and gastric disturbance may occur. **Contraindications:** Patients with known idiosyncrasy to nicotinic acid or other components of the drug. Use with caution in pregnant patients and patients with glaucoma, severe diabetes, impaired liver function, peptic ulcers, and arterial bleeding.

Psychiatric hospitalization of the prominent individual often presents an unusual treatment challenge.

Springwood at Leesburg, a 30-bed private psychiatric hospital in Loudoun County, Virginia, provides short- to intermediate-term inpatient treatment for the most demanding patients—including physicians, corporate executives, government officials, and their respective family members.

Springwood at Leesburg has been designed, organized, and staffed to treat a broad range of psychiatric disorders successfully. Hospital programs offer each patient highly individualized care in a comfortable and attractive therapeutic setting.

An unusually high staff/patient ratio assures personalized support for each patient in all therapeutic activities.

Springwood at Leesburg is situated on a secluded 45-acre estate, 35 miles west of Washington, D.C.

Treating sexual dysfunctions in male patients

JOYCE D. KALES, M.D.
ENOS D. MARTIN, M.D.
GREGORY FRANCHINI, M.D.
Hershey

This article is the second in a series coordinated by members of the departments of psychiatry of Pennsylvania's medical schools. The series is intended to help physicians in general practice to assess and manage the emotional needs of their patients. The first three articles constitute a mini-series on human sexuality. This month Dr. Kales and associates discuss the sexual history and the diagnosis and treatment of male sexual dysfunctions. The next article will examine female sexual dysfunctions.

The practicing physician should be alert to sexual dysfunctions presented as functional complaints or, more directly, as complaints of impotence, premature or retarded ejaculation, sexual arousal dysfunction, orgasmic dysfunction, or vaginismus.

By taking a sexual history in a skilled and comfortable manner so that the sexual concerns of his patients are not disregarded or dismissed, the physician is often able to determine the organic or emotional cause of the disorder and suggest therapeutic treatment of the dysfunction.

The sexual history

During visits for general physical and premarital examinations, menstrual complaints, pregnancy, the post-partum period, or contraceptive advice, it is logical to obtain sexual information that can be used prophylactically and therapeutically for sexual dysfunction.

Complaints of depression, anxiety, or chronic insomnia, the presence of multiple somatic complaints of undetermined cause, alcoholism, and the post-coronary period are all situations that require a thorough sexual history.

When the physician's inquiry is skillful and nonjudgmental and when he appears comfortable and desensitized to the topic, the patient usually will not be reticent in discussing sexual matters. The physician may choose to practice taking a sexual history with colleagues of both sexes to assess areas of hesitation and to gain greater experience.

Dr. Kales is director of the division of community and social psychiatry and of the sex education program and sexual dysfunctions clinic of the department of psychiatry of The Milton S. Hershey Medical Center. Drs. Martin and Franchini are associates in the department of psychiatry at Hershey.

During the sexual interview, it is most productive to proceed from less sensitive questions to those of greater sensitivity. Open ended questions about the general marital relationship, for example, will naturally lead to more specific questions about the attitudes, nature, frequency, satisfaction, and problems associated with the patient's sexual history. If general areas of dissatisfaction with a partner are indicated, one may ask specifically "How have these difficulties affected the sexual relationship and general closeness between you?"

For the male partner, it is important to know if there are difficulties with erection or ejaculation or a lack of interest in sex. The following questions are helpful:

1. When and under what cir-

cumstances did the symptom first occur?

2. What is the patient's reaction to the symptom?

3. What is the partner's reaction to the symptom?

4. In what situations does the symptom recur?

For the female, in addition to the above questions, it is important to determine whether she feels appealing to her partner; whether she initiates, freely engages in, or merely tolerates lovemaking; and whether she is orgasmic frequently, infrequently, or never. In addition, the integration of contraceptive practices into the sexual relationship should be determined.

Several specific guidelines should be remembered during the sexual interview:

- be attentive to direct and indirect questions that indicate sexual concerns;
- do not impose your own values on the patient;
- acknowledge the patient's anxiety when it interferes with the interview;
- avoid undue familiarity; and
- maintain confidentiality.

General causes of dysfunction

Two distinct neurophysiological components make up human sexual response. The first is genital vasocongestion which produces penile erection in the male and vaginal lubrication and swelling in the female. The second is a series of involuntary clonic contractions of the genital musculature which constitute orgasm.

Any factor which adversely affects the blood vessels or the nerves involved in either of these sexual response phases can result in a sexual dysfunction.

Diabetes mellitus is the most common organic cause of impotence in males, with adult onset diabetics frequently becoming impotent within five to ten years. Impotence may, in fact, appear before any other clinical evidence of diabetes. The pathogenic mechanism in this case is presumed to be based on neurologic and vascular alterations.

Other medical conditions and certain drugs are often associated with sexual difficulties. Sexual response may be impaired by any condition which causes pain or irritation during intercourse or interferes with intromission, such as severe arthritis, lower back problems, extreme obesity, or local infection.

Vascular problems, e.g., trauma to genital blood vessels, Leriche syndrome, leukemia, sickle cell anemia, and Peyronies disease, have been implicated in male dysfunctions. Damage to the neurologic system may affect erection and ejaculation but does not necessarily affect libido. Multiple sclerosis, diabetes, and neurologic degenerative diseases may result in dysfunction because of their effects on the lower neurologic system.

A decrease in libido and diminished erectile ability may be caused by any physical disorder, surgical procedure, or medication that depresses the effective androgen level. Hypopituitary disorders or feminizing testicular tumors, for example, may lead to a decrease in available androgens. Surgical removal of the pituitary, adrenals, or gonads leads to decreased androgen supply; the introduction of estrogen compounds may antagonize the action of androgens, leading to chemical castration.

Certain liver disorders, such as hepatitis, cirrhosis and mononucleosis, impair the liver's ability to properly conjugate estrogens, thus resulting in an increased level of estrogen with its anti-androgen effects.

Alcohol and most other central nervous system depressant drugs diminish rather than enhance sexual ability. Alcohol and barbiturates are similar in that they may provoke desire, particularly in inhibited persons, but they ultimately impair response. The use of narcotics may also depress sex drive and result in erectile difficulty.

Anticholinergic (probanthine and atropine), antiadrenergic (Rauwolfia alkaloids and methyldopa), and ganglionic blocking agents may impede erection and ejaculation by depressing the parasympathetic and sympathetic nervous systems. Reserpine and methyldopa, two antihypertensive agents, may also produce a decrease in libido as a consequence of the depression sometimes induced by these drugs. A possible side effect of thioridazine, a phenothiazine drug, is to alter ejaculation, resulting in a "dry orgasm." Nicotine, because of its effect of peripheral vasoconstriction, can also contribute to impotence.

Sexual dysfunctions may also stem from psychological conditions, faulty attitudes derived from the family or culture, or ignorance of normal bodily functions and physiology. It is estimated that 75 to 90 percent of sexual dysfunctions are caused by psychosocial factors. Healthy sexual response is easily disrupted by negative feelings or by psychological conflicts.

Sexual dysfunction may be due to neurotic conflicts originating in early childhood but the roots of sexual dysfunction are not always so deep seated. In many instances, the cause of sexual dysfunction is more immediate, such as performance anxiety, tension due to poor communication, and misconceptions about sexual behavior.

Performance anxiety is a state of fear which may develop following an episode or two of sexual dysfunction. The anticipatory thoughts of "Is it going to happen again?" "Will I be able to do well?" cause the individual to become overly anxious about sexual performance, which in turn may result in a more chronic sexual dysfunction.

In situations in which sexual dysfunction is primarily or solely due to more immediate causes, sex education, supportive counseling, and the prescription of brief behavioral tasks are extremely effective, often within a short period of time.

When sexual dysfunctions are due to long standing neurotic conflicts, with or without superimposed immediate precipitating factors, more intensive psychodynamically oriented therapy augmented by the assignment of behavioral tasks is indicated.

Common male dysfunctions

Table I lists the causes of common male sexual dysfunctions and suggested diagnosis and treatment.

Impotence—Impotence is often transient and situational: it may occur with fatigue; with psychological conditions such as fear of performance, guilt, anger, or depression; or with medical or drug related conditions.

Diagnosis—It is estimated that 10 percent of all cases of impotence have

TRUMAN CLOSES TED NATIONS CONFEREN ITH PLEA TO TRANSLATE CHARTER INTO DEEDS

NEW WORLD HOPE

President Hails 'Great Instrument of Peace,' Insists It Be Used

HISTORIC LANDMARK

Meeting Gives Standing Ovation as Executive Pictures Peace Gain

"If we fail to use it," he declared to the solemn final meeting of the delegates, 'we shall betray all of those who have died in order that we might meet here in freedom and safety to create it.'

"If we seek to use it selfishly—for the advantage of any one nation or any small group of nations—we shall be equally guilty of that betrayal."

Fervent Interpolation

The President, speaking in the auditorium of the War Memorial Opera House, built in memory of sons of the Golden Gate city who gave their lives in the first World War, in which he himself served, seemed to give unconscious expression to the solemn feeling of the occasion when, at the outset of his speech, he interpolated the words, half a hope, half a prayer:

"Oh, what a great day this can be in history!"

Just before the plenary session the President accompanied the

SIGNE the Draf Ends Nov

WASHINGTON, Jan. 27, 1973—"With the signing of the peace agreement in Paris today, and after receiving a report from the Secretary of the Army that

PATIENT PACKAGE INSERTS: A CONCEPT WHOSE TIME HAS COME?

The consumer's right to know is an irreversible and desirable trend of the Seventies. It extends, and properly, to a patient's right to know more about his or her prescription medications. One way, gaining favor, is through patient package inserts. Wisely-prepared and properly distributed when medically indicated, they could markedly improve patient knowledge and drug therapy—laudable goals by anyone's standards.

The PMA endorses these goals and will work with government, the health professions and consumers to achieve them.

The Advantages

The concept holds promise of benefits: better patient understanding of the product prescribed, better adherence to the treatment plan, and more awareness of possible side reactions.

Every doctor has had patients who fail to finish antibiotic regimens because they feel better. Some patients assume that if one tranquilizer or analgesic is good, two may be twice as good. Still others fail to report dizziness while on antihypertensive therapy —and so on.

Problems like these might arise less often if the patient received written information in addition to verbal instructions. Some studies suggest that patients are more receptive to such materials, and they more often understand the verbal instructions and follow them, when inserts are used.

The Disadvantages

There are also some potential problems. Obviously, the inserts must be clearly phrased, without extraneous or complex detail. How much information is enough? How can it be kept current? Should all patients receive the same information? Should inserts be included with all drugs? Should only potential problems be listed or are patients better off with a "fair balance" presentation that describes usefulness as well as drawbacks?

These and similar questions require answers, since model inserts have yet to be properly developed and tested. Despite the need for these studies, the FDA is proceeding prematurely with inserts on selected products. We think the Congress is the only place where the matter can be given the proper legal status and direction, particularly since it represents a conceptual change in the legal, medical and social framework of the nation's prescription drug information system.

The Solution

The PMA believes that carefully-devised pilot studies of various kinds of inserts are needed. They should be developed and implemented with full participation by doctors, pharmacists, consumers, communications experts and the drug industry. Such studies will provide reliable pathways to follow, so that inserts will be useful aids to medical practice.

And particularly we think that you should be closely involved in this debate and in these studies and decisions. Otherwise, people with less experience and qualifications may control the purposes, content and use of a tool with considerable promise for improved patient care. It could make a difference in your practice tomorrow, and more importantly, in the health of your patients.

Male sexual dysfunction

(Continued from page 39)

a pathophysiological cause. Reports indicate, however, that an organic component may be present in as many as half of males with psychogenically based impotence.

The distinction between organic and functional impotence is sometimes difficult to determine. A nocturnal cycle of penile erections has been found to occur in correlation with rapid eye movement (REM) sleep, which is a time of intense autonomic activity and dreaming. The presence of morning or "REM" erections several times a week is a strong indication that a complaint of impotence is psychogenically based.

If erections are obtained with masturbation or with partners other than a wife, it is likely that impotence is psychologic and occurs situationally.

Glucose tolerance tests, testosterone levels, and hepatic function tests should be obtained. A careful survey of drugs, particularly antihypertensives (methyldopa, Rauwolfia compounds), sedatives, hypnotics, alcohol (including beer), and nicotine should also be taken. The possibility of an underlying depression should be assessed by an evaluation of the patient's mood, appetite, and sleep patterns, and the presence of suicidal impulses.

Treatment—When impaired potency is due to a medical condition or drug, treatment of the condition or alteration of the drug to one which does not interfere with the erectile mechanism is indicated.

An active and direct approach to alcoholism and the excessive use of sedatives and hypnotics is appropriate, for patients frequently fail to recognize the connection between abuse of these substances and their sexual dysfunction.

Depression should be appropriately treated with antidepressant medication. As the depression is alleviated, sexual interest and potency frequently return.

The neurologically impaired patient may require penile prosthetic devices which operate on a hydraulic principle and may be surgically implanted to assist sexual functioning. Alternative expressions of affection and sexual activity can be substituted for coitus.

For impotence which is functional or psychogenic, support should be given for efforts to gradually restore the sexual relationship and to decrease performance anxiety. The sensate focus exercises or "mutual pleasuring" described by Masters and Johnson should be prescribed for several weeks before coitus is attempted. The exercises should be practiced for 15 to 30 minutes several nights each week. Sufficient time should be set aside during which the couple will not be interrupted or hurried.

This prescription involves having the couple refrain from intercourse and orgasm for several days or weeks, during which time they periodically take turns gently caressing each other's bodies, in the first sessions avoiding and in the later sessions including the genitals.

The partners communicate in a positive manner the sensations they enjoy and the ways in which they prefer to be caressed. For example, "I like a more heavy massage" is more readily accepted than "Don't do that—it tickles!"

The prohibition of intercourse eliminates performance anxiety as does the therapeutic prescription that the couple "give and receive pleasure" rather than put on a performance.

The man may have an erection during exercises which involve pleasur-

TABLE I
Male Sexual Dysfunctions

Condition	*Causes*	*Diagnosis*	*Treatment*
Impotence	Organic:		
	Diabetes mellitus	Glucose tolerance test	Treat underlying medical condition
	Vascular, endocrine, neurologic	Testosterone levels, hepatic function	
	Drug and alcohol	Drug and alcohol survey	Withdraw alcohol, sedatives
			Consider prosthetic device
	Psychogenic:		
	Depression	Assess depression	Treat depression
	Anxiety	Presence of morning erections	Eliminate performance anxiety
		Erections with masturbation or other partner	Sensate focus exercises
			Vaginal containment
Premature ejaculation	Psychologic:		
	Lack of control of ejaculatory mechanism	Ejaculation occurs before full arousal of partner	Supportive partner to eliminate performance anxiety
	Lack of awareness of ejaculatory inevitability		Start-stop technique
Retarded ejaculation	Organic:		
	Neurologic disorder	Erection intact but unable to ejaculate intravaginally	Treat underlying neurologic condition
	Drugs		Appropriate change of drugs
	Psychologic:		
	Overcontrol		Eliminate performance anxiety
	Fear of impregnation		Desensitize to ejaculation in presence of partner

ing of the genital area. The physician should emphasize during subsequent visits that the patient's ability to have this erection means his anatomy and physiology are in good working order and will function in a relaxed atmosphere. The physician should also point out that if an erection is lost it can be regained when the woman resumes manual or oral stimulation.

After the man is able to achieve an erection without orgasm, the task proceeds to orgasm produced by manual or oral stimulation outside the vagina. The procedure is as before except that the man may ejaculate if he desires. At this time the woman is encouraged to accept manual stimulation to orgasm also, so that her pleasure is no longer dependent on an erect penis over which there is no voluntary control.

The next stage is vaginal containment without orgasm. The couple engages in the same sort of erotic activity that produced orgasm the previous week. When erectile capacity has been demonstrated, the female partner in the superior position inserts the penis. If erection is lost, the early steps are repeated until confidence is regained and the erection returns. The woman thrusts several times and then withdraws, repeating the procedure several times. If ejaculation is desired at this stage, it should be extravaginal.

In the final task, the man may ejaculate intravaginally. At this stage he is advised in the presence of his partner to be temporarily selfish; to abandon himself to his own feelings. He now will have gained sufficient confidence to leave the exercises. If the man has future transient erectile difficulty he can return to the techniques learned in sex counseling.

The relief of impotence may create anxiety or depression in the man or woman if the dysfunction served an underlying defensive purpose. The woman may fear rejection or feel envy or hostility toward the man for his restored potency. The physician should initiate a discussion of the couple's thoughts and feelings about the prescribed tasks and an exploration of any resistance to carrying out the tasks. For persisting disharmony and overt conflict, referral should be made for marital therapy.

Premature ejaculation—When a lack of adequate control of the ejaculatory mechanism occurs, the man's climax is reached so rapidly that lovemaking is unsatisfactory for both partners.

The cause may be emotional conditioning (e.g., too rapid, secretive lovemaking) or lack of perception of the sensation of impending ejaculation, or "ejaculatory inevitability." Performance anxiety again contributes to the underlying problem.

Treatment—Treatment for premature ejaculation is relatively simple and usually quite successful. The couple is instructed in the "start-stop" technique, which requires that the female manually stimulate the male to erection and stop when the ejaculatory urge is first felt. When the erection subsides she repeats the procedure, again stopping as soon as the ejaculatory urge is felt.

Because the female partner is so supportive, the male is relieved of the pressure to perform. The procedure is repeated four or five times, and then extravaginal ejaculation is allowed. After four or five similar sessions on a series of days, coitus is attempted with the woman in the female-superior position. Using the start-stop technique, she interrupts movements when the man feels the urge for ejaculation. This is repeated three or four times and then male thrusting and ejaculation is allowed. In this way ejaculatory control is gradually learned.

The "squeeze technique" is an alternative method recommended by Masters and Johnson for treatment of premature ejaculation. Rather than stopping the manual or vaginal stimulation when ejaculation is impending, the woman grasps the erect penis between her forefingers and thumb just below the glans and squeezes firmly until the male loses most the the erection. She then resumes stimulation. The procedures are repeated as with the start-stop technique.

Retarded ejaculation—The continuity of the bi-phasic or two stage nature of sexual response breaks down when ejaculation is retarded. The first stage, erection, is obtained with no difficulty but the second stage, ejaculation, is not reached even when coitus is prolonged for one or more hours.

Diagnosis—Retarded ejaculation is less common than impotence and is rarely due to organic illness. The exceptions are diseases of the neurologic system, in which reflex erection is preserved but ejaculation is lost, and the use of certain drugs which affect the adrenergic mechanism controlling the emission phase of ejaculation, as in the case of "dry ejaculation" resulting from use of thioridazine (Mellaril). Some antihypertensive drugs may also impair ejaculation.

Retarded ejaculation is usually characterized by a deep-seated emotional problem of "letting go" or by over control of the ejaculatory reflex. Occasionally retarded ejaculation is a result of concern of impregnating the partner and as such is present only during coitus and not during other forms of sexual play or masturbation. A rare form of this condition is seen in patients who have never experienced orgasm by any means but who have normal erections.

Treatment—The treatment of retarded ejaculation requires gradual desensitization of the male to ejaculation in the presence of the female partner, first by masturbation with the use of erotic fantasies or literature and then by experiencing erotic fantasies while the female manually or orally stimulates him.

When ejaculation is achieved successfully by these two methods, the patient is stimulated to impending orgasm by the woman and directed to enter the vagina just as he is about to ejaculate. If he is unable to ejaculate or loses his erection, manual stimulation is resumed until the point of orgasm, when vaginal insertion is again attempted. Eventually the patient is able to enter the vagina and achieve intravaginal orgasm with progressively less stimulation.

In summary, in evaluating male sexual dysfunctions, the physician must be aware of the organic causes of the disorder as well as the emotional determinants of sexual performance anxiety, conflict, and lack of sexual information. Treatment of the disorder may then require medical therapy or assignment of sexual tasks to relieve the dysfunction, or referral for marital therapy if the disorder persists. □

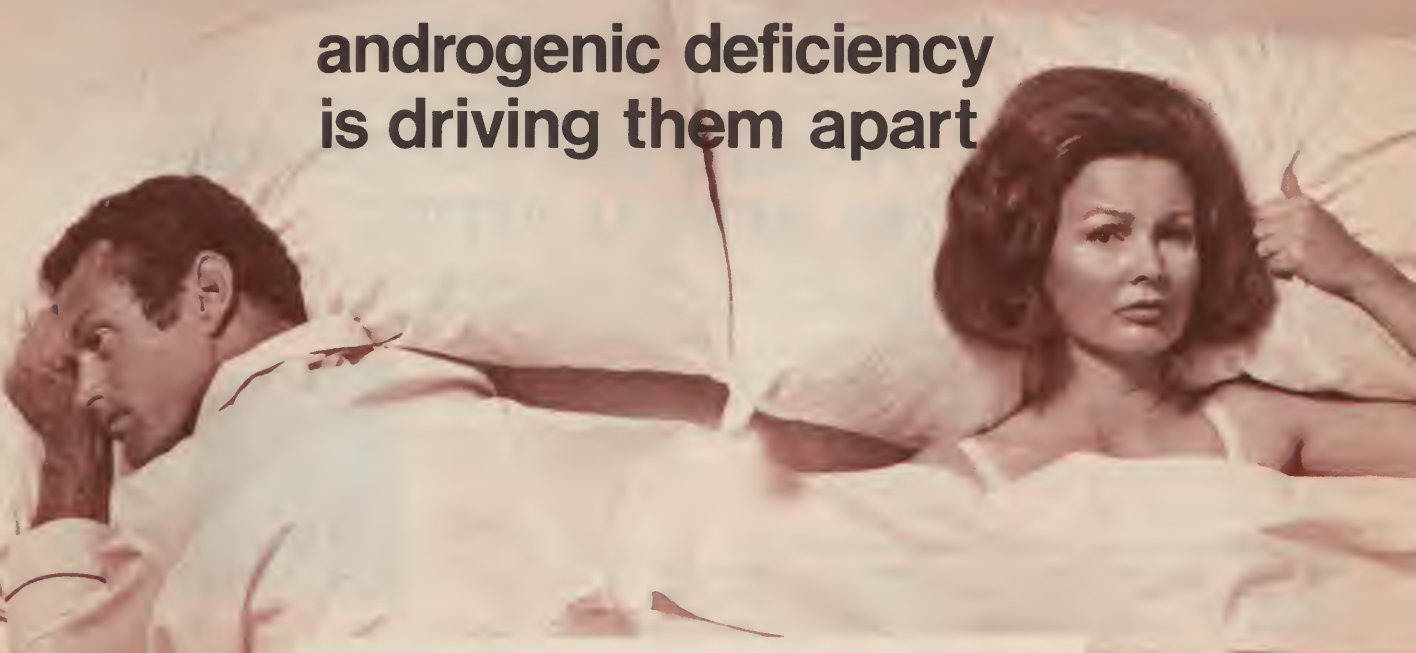
When **impotence** due to androgenic deficiency is driving them apart



Android®-5 Buccal Tabs

Android®-10 Oral Tabs

Android®-25 Oral Tabs

Methyltestosterone U.S.P. – 5, 10, 25 mg.

New Double-Blind Study ANDROID-25 *vs.* Placebo*

* **WRITE FOR REPRINT:** R. B. Greenblatt, M.D.; R. Witherington, M.D.; I. B. Sipahioglu, M.D.: Hormones for Improved Sexuality in the Male and Female Climacteric. *Drug Therapy*, Sept. 1976.

Is there a true aphrodisiac? How effective are androgens in the management of the male climacteric and male impotence? Article discusses the psychophysiological and hormonal changes in the elderly male and female and therapeutic considerations. The effectiveness of methyltestosterone in the management of male impotence was confirmed by a cross-over, double-blind study using a placebo and Android-25 (methyltestosterone 25 mg.), on 20 males, 50 years of age or older who complained of secondary impotence. Patients received a series of placebo then Android-25, or Android-25 then placebo as follows: 1 tablet/30 days; 2 tablets/30 days; 3 tablets/30 days. Sexual response was evaluated: 0 = no change; + = 25% improvement; ++ = 50% improvement; +++ = 75% improvement. Placebo effectiveness was + or ++ in 12.7% of trials. Android-25 elicited a +, ++ or +++ response in 47.2% of trials. There was often a dose related response not observed with the placebo. This effect was not observed in younger patients (age 28-45 years).

DESCRIPTION: Methyltestosterone is 17β-Hydroxy-17-Methylandrost-4-en-3-one. **ACTIONS:** Methyltestosterone is an oil soluble androgenic hormone. **INDICATIONS:** In the male: 1. Eunuchoidism and eunichism. 2. Male climacteric symptoms when these are secondary to androgen deficiency. 3. Impotence due to androgenic deficiency. 4. Post-puberal cryptochidism with evidence of hypogonadism. Cholestatic hepatitis with jaundice and altered liver function tests, such as increased BSP retention, and rises in SGOT levels, have been reported after Methyltestosterone. These changes appear to be related to dosage of the drug. Therefore, in the presence of any changes in liver function tests, drug should be discontinued. **PRECAUTIONS:** Prolonged dosage of androgen may result in sodium and fluid retention. This may present a problem, especially in patients with compromised cardiac reserve or renal disease. In treating males for symptoms of climacteric, avoid stimulation to the point of increasing the nervous, mental, and physical activities beyond the patient's cardiovascular capacity. **CONTRAINDICATIONS:** Contraindicated in persons with known or suspected carcinoma of the prostate and in carcinoma of the male breast. Contraindicated in the presence of severe liver damage. **WARNINGS:** If priapism or other signs of excessive sexual stimulation develop, discontinue therapy. In the male, prolonged administration or excessive dosage may cause inhibition of testicular function, with resultant oligospermia and decrease in ejaculatory volume. Use cautiously in young boys to avoid premature epiphyseal closure or precocious sexual development. Hypersensitivity and gynecomastia may occur rarely. PBI may be decreased in patients taking androgens. Hypercalcemia may occur, particularly during therapy for metastatic breast carcinoma. If this occurs, the drug should be discontinued. **ADVERSE REACTIONS:** Cholestatic jaundice • Oligospermia and decreased ejaculatory volume • Hypercalcemia particularly in patients with metastatic breast carcinoma. This usually indicates progression of bone metastases • Sodium and water retention • Priapism • Virilization in female patients • Hypersensitivity and gynecomastia. **DOSAGE AND ADMINISTRATION:** Dosage must be strictly individualized, as patients vary widely in requirements. Daily requirements are best administered in divided doses. The following is suggested as an average daily dosage guide. **In the male:** Eunuchoidism and eunuchism, 10 to 40 mg.; Male climacteric symptoms and impotence due to androgen deficiency, 10 to 40 mg.; Postpuberal cryptorchism, 30 mg. **REFERENCE: Robert B. Greenblatt, M.D.,** and **D. H. Perez, M.D.:** "The Menopausal Syndrome," *Problems of Libido in the Elderly*, pp. 95-101. Medcom Press, N.Y., 1974. **HOW SUPPLIED:** 5, 10, 25 mg. in bottles of 60, 250. Rx only.

PERSONNEL POLICIES AND PROCEDURES FOR THE MEDICAL OFFICE

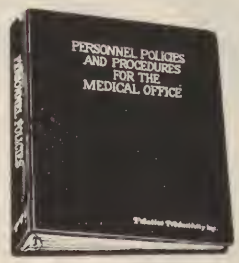
Do you have personnel policies? Are they written? Are they up to date? Do they provide a clear, concise, competitive statement of what you offer and what you expect from your employees? Are your policies within the guidelines of recent legislation?

- Tells the employee what to expect on these important topics:

Working hours	Personal appearance	Vacation	Outside employment
Holidays	Personal phone calls	Housekeeping	Personal medical care
Smoking	Civic responsibilities	Parking	Compassionate leave

- Reviews policy topics for the manager in depth.
- Prewords sample policies for you on 23 topics.
- Makes you aware of many employer obligations such as:

Sick leave	Medical &	Salary	Summary dismissal
Personal days	dental appointments	Discipline	Other benefits
Probation	Performance review	Termination	Leave of absence



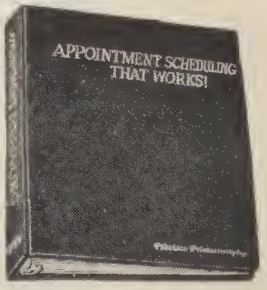
AN EASY WAY TO WRITE PERSONNEL POLICIES!

*

APPOINTMENT SCHEDULING THAT WORKS!

A course in appointment scheduling that enables your medical assistant to rebuild your scheduling system – according to the way you work.

- Your appointment employee learns about your real problems as she explores the improvements.
- The resulting schedule is custom designed for your specialty – the way you do things.
- Respects the patient's time. Keeps him from waiting more time than is reasonable - (usually 20 - 30 minutes maximum).
- Begin getting home on time.
- The workbook becomes a portfolio for continued improvement in future years.
- A simplified "Systems Analysis" approach to an age old problem.



A NEW APPOINTMENT SCHEDULE FOR YOU!

PHYSICIANS WANTED

House Physicians—Full time with Pennsylvania license for 100-bed suburban hospital. Salary $31,000 plus. Excellent employee benefit program, including paid malpractice insurance. Please contact: Haverford Community Hospital, 2000 Old West Chester Pike, Havertown, PA 19083; (215) 449-0900, ext. 201. An equal opportunity employer.

Family Practitioners—Tamaqua, northeast Pennsylvania. Area population about 18,000. Community assistance. Telephone collect (717) 668-1880 or write Tamaqua Area Chamber of Commerce, Tamaqua, PA 18252.

Anesthesiologist—Board certified or board eligible. Full-time, terms negotiable. Contact Mrs. Nancy D. Super, Administrator, Hazleton State General Hospital, Hazleton, PA 18201.

Internist—Rural area, close to interstates. Excellent hunting, fishing, summer and winter sports. Southwestern Pennsylvania. Fifty-three bed fully accredited hospital, 12 active staff members. Financial inducement available. Contact James M. Brown, Administrator, Meyersdale Community Hospital, Meyersdale, PA 15552; (814) 634-5911.

Emergency Care Physician—Full-time. Good salary, benefits package. Opportunity for corporate participation. Eastern Pittsburgh suburbs. Send curriculum vitae to Western Pennsylvania Emergency Physicians, Inc., PO Box 128, Pitcairn, PA 15140.

House Staff Physician—Excellent opportunity for a *Pennsylvania licensed* physician to serve in a responsible position of a modern suburban Philadelphia, 286 bed hospital. JCAH accredited. $35,000 per year plus vacation, sick leave, paid pension plan, hospitalization, malpractice insurance, and disability insurance. Some evening and night duty required. For further information, contact John F. Dunleavy, Assistant Administrator, Holy Redeemer Hospital, Meadowbrook, PA 19046; telephone (215) 947-3000.

Physicians—Licensed generalists and specialists needed for military medical officer positions at 58 worldwide Army hospitals. Guaranteed assignment location. Excellent practice environment, salaries, and unexcelled benefits, including malpractice coverage. Contact Captain Whitmire, AMEDD Personnel Counselor, Building 5515, Room 309, Fort Dix, NJ 08640, or call collect (609) 562-2663.

Physiatrist—Interesting position for board certified or eligible applicant to be the first full-time salaried physiatrist at this 600-bed teaching hospital in a beautiful suburban area near Reading, Pennsylvania. Modern department presently staffed by therapists with consulting by part-time physiatrists. Excellent fringe benefits. Salary negotiable. Send resume to Director of Personnel, PO Box 878, Reading, PA 19603. Equal opportunity employer.

Physician for Weekend Medical Officer of the Day—To cover services in large general type federal hopital. Will provide 24-hour coverage 8 A.M. Saturday to 8 A.M. Sunday and/or 8 A.M. Sunday to 8 A.M. Monday. $240 fee for 24-hour coverage. Contact Personnel Officer, VA Hospital, Lebanon, PA 17042; (717) 272-6621, ext. 230. Nondiscriminatory employer.

Internist: Director of Ambulatory Care—For the VA hospital in the University of Florida Medical Center in Gainesville. Responsibilities include overall direction of general medicine clinic and admitting office. Close interaction with the medicine services at the VA and university hospitals is expected. Full faculty status with the department of medicine at the University of Florida with fringe benefits from VA and university. Patient care or research activity in a subspecialty or general health care research is available and encouraged. If interested, please send curriculum vitae to Dr. James E. McGuigan, Chairman, Department of Medicine, University of Florida College of Medicine, Gainesville, FL 32610.

Diagnostic Radiologist—Third radiologist urgently needed by private group in south central Pennsylvania serving two offices, one hospital. Must be A.B.R. certified. Send full curriculum vitae to Department 766, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Two Family Practitioners Wanted—To join multi-specialty group. Guaranteed salary, excellent benefits. Modern office building close to hospital. College town in south central Pennsylvania. Write Department 767, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

RESIDENCY IN PHYSICAL MEDICINE AND REHABILITATION

Dynamic, young program with balanced academic and clinical emphasis under the supervision of ten physiatrists. Three year program and integrated internship/residency with opportunity for research and pursuit of special interests both in medical school and private hospital settings. One year's credit for four years of general practice experience or training in another specialty. Stipends from $13,300 to $15,200 depending on qualifications. GI schooling benefits available for veterans. We will pay for visits in selected cases. Telephone or write for information to:

John F. Ditunno, Jr., M.D., Director
Department of Rehabilitation Medicine
Thomas Jefferson University Hospital
11th and Walnut Streets
Philadelphia, Pa. 19107
Telephone: (215) 829-6573

Psychiatrists and Physicians—Board certified or eligible, Pennsylvania license required. Immediate openings. Excellent opportunity to work in state hospital in developing new programs. Salary competitive. Limited housing available. Excellent fringe benefits. Call (412) 459-8000 or write Ray Bullard, M.D., Superintendent, or Peter Bishop, D.O., Assistant Superintendent, Torrance State Hospital, Torrance, PA 15779. An equal opportunity employer.

Emergency Physicians—A multi-hospital group of emergency physicians seeks members for full-time positions at major hospital emergency departments in Philadelphia and other areas of Pennsylvania. In addition to full-time emergency physicians, a physician director is sought for each emergency department. The group encourages professional and administrative autonomy in its member physicians. Financial arrangements are fee-for-service with minimum guarantee. Emergency-oriented educational programs for physicians are maintained by the group at no charge to its members. Compensation ranges from $40,000 to $60,000 per year for 48 hours per week. Write: Department 650, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pa. 17043.

Psychiatrist, Board Certified or Board Eligible—Mental hospital in metropolitan area. Easy access to New York, Philadelphia, and close to Pocono resort area. Good salary with excellent fringe and retirement benefits. Pennsylvania license required. Contact: Henry Buxbaum, M.D., Superintendent, Clarks Summit State Hospital, Clarks Summit, PA 18411; telephone (717) 586-2011.

House Coverage—Tired of the rat race of private practice—or are you just getting started and could use supplemental income? In either case, contact Sister Salvatore at Nazareth Hospital in northeast Philadelphia—(215) 331-8000—for a very attractive offer on house coverage. Malpractice insurance, vacation, life insurance, health plan are just a few of the benefits that are a part of this offer that includes a salary in the low 30s. Call today.

Orthopedic Surgeon Wanted—Associate for well established Orthopedic Clinic in Eastern Pennsylvania. First year, salary plus percentage. Partnership after one year. Board eligibility required. No investment needed. Write Department 709, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Pennsylvania and New Jersey Emergency Medicine positions available with fee-for-service group in suburban Philadelphia, central and eastern Pennsylvania, Pittsburgh, and northern and southern New Jersey hospitals. Physician directors also wanted. Send resume to: Northeast Emergency Medical Association, 500 Spruce St., Philadelphia, PA 19106; (215) 925-3511.

FOR SALE

Established Family Practice—Knoxville area of Pittsburgh, Pennsylvania. Price $10,000 plus building. A fine opportunity for an aggressive young GP in a working class neighborhood. Write Department 765, PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, PA 17043.

Eye, Ear, Nose, and Throat Equipment—Treatment table, office furniture, dictaphone, etc. Contact (412) 437-2041.

FOR RENT

Space in Fort Washington-Ambler Area Professional Center—Specialties or general practice; 4 treatment rooms, laboratory, dark room, business office, waiting room, consultation room. Primary or secondary office, furnished or unfurnished, shared lease possible. (215) 646-1665.

MISCELLANEOUS

Biomedical Electronics Service—Repairs medical, laboratory, and other electronic equipment. Will install and remove x-ray equipment. Walker Electronics, 117 Sylvan Terrace, Harrisburg, PA 17104; telephone (717) 233-4716. Happy holidays from Wayne Walker and family.

CLASSIFIED ADVERTISING INFORMATION

Rates—$12.00 per insertion up to 30 words; 50 cents each additional word; $1.00 per insertion for answers sent in care of Pennsylvania Medical Society. Payable in advance.

COPY DEADLINE—Copy due by the first day of month preceding month of publication. Send to PENNSYLVANIA MEDICINE, 20 Erford Rd., Lemoyne, Pennsylvania 17043. The right is reserved to reject or modify copy to conform with publication rules.

DEPARTMENT NUMBERS—Advertisers using department numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers.

WORD COUNT—Count as one word all single words, two initials of a name, each abbreviation, isolated numbers, groups of numbers, hyphenated words. Count name and address as five words, telephone numbers as one, and "Write Department . . ., PENNSYLVANIA MEDICINE" as five.

For your information

•Hazardous Materials and Media in the Art Class

An outline of hazards and how to prevent them in the use of materials in the arts. Such materials as fiberglass, vinyl acetate, vinyl chloride, silicone in stone grinding and clay modeling, and the potential for lead and carbon monoxide poisoning in welding, brazing, and molding are discussed. The booklet can be obtained from the School Health Program, Bureau of Children's Preventive and Restorative Services, Pennsylvania Department of Health, Harrisburg, PA 17120.

•Medical Audiovisuals: A Comprehensive Catalog

A 1977 edition which lists over 5,000 audiovisual materials in the health sciences. This is a bibliographic tool that does not evaluate the material included. All entries are arranged alphabetically by subject heading. There are over 1,200 subject headings in use. If you are interested in a copy, contact the Welch Medical Library, Johns Hopkins University, Baltimore, MD 21218. There is a fee of $42 for this catalog.

•Personnel Policies and Procedures for the Medical Office

A comprehensive statement of typical policies for use in your office. The manual is divided into two valuable sections: manager's review and sample policies. The cost is $26.30 including postage; to members of PMS, $20. You must mention that you are a PMS member. The booklet is available from Practice Productivity, Inc., 2000 Clearview Avenue, Suite 101, Atlanta, GA 30340; (404) 455-7344.

Report of the Joint National Committee on Detection, Evaluation, and Treatment of High Blood Pressure

A guide to management and education of hypertensive patients. The report presents a simple, economic approach to diagnosis and treatment, with updated guidelines for therapy and increased patient compliance. A copy of the report may be ordered from the High Blood Pressure Information Center, 120/80 National Institutes of Health, Bethesda, MD 20014.

•Manual on Alcoholism

The third edition of the AMA Manual on Alcoholism is now available. This edition incorporates a major portion of another AMA publication, *Medical Complications of Alcohol Abuse*, now out of print. With the integration of this material and with the addition of other data based on recent research and clinical experience, the new manual is designed to present a current authoritative overview of the major considerations involved in helping patients with alcohol problems. Major chapters define alcoholism as a disease; explore physiological, psychological, and sociological factors significant in its causation; explain the metabolism and pharmacology of alcohol; and provide ample material on the diagnosis and treatment of alcoholism. The manual may be obtained from the AMA Order Department, 535 North Dearborn Street, Chicago, IL 60610. Order OP185. Prices are: 1-10 copies, $2.50 each; 11-49 copies, $2.25 each; 50 or more copies, $2.00 each.

THE ANXIETY-SPECIFIC.

- a predictable pattern of patient response
- seldom associated with serious side effects, in proper dosage
- rarely interferes with mental acuity
- used concomitantly with many primary medications
- three dosage strengths meet most patient needs

LIBRIUM® (IV)

chlordiazepoxide HCl/Roche

5 mg, 10 mg, 25 mg capsules

Libritabs® (chlordiazepoxide) available in 5 mg, 10 mg and 25 mg tablets.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Relief of anxiety and tension occurring alone or accompanying various disease states.

Contraindications: Patients with known hypersensitivity to the drug.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported.

***Usage in Pregnancy:* Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Usual Daily Dosage: Individualize for maximum beneficial effects. *Oral—Adults:* Mild and moderate anxiety and tension, 5 or 10 mg *t.i.d.* or *q.i.d.*; severe states, 20 or 25 mg *t.i.d.* or *q.i.d. Geriatric patients:* 5 mg *b.i.d.* to *q.i.d.* (See Precautions.)

Supplied: Librium® (chlordiazepoxide HCl) *Capsules,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500; Tel-E-Dose® packages of 100, available in trays of 4 reverse-numbered boxes of 25, and in boxes containing 10 strips of 10; Prescription Paks of 50, available singly and in trays of 10. Libritabs® (chlordiazepoxide) *Tablets,* 5 mg, 10 mg and 25 mg—bottles of 100 and 500. With respect to clinical activity, capsules and tablets are indistinguishable.

ROCHE

Roche Laboratories

Nutley, New Jersey 07110

Please see following page.

THE ANXIETY-SPECIFIC.

Since its discovery in the research laboratories at Roche, Librium has been the object of ongoing pharmacologic and clinical investigation.

The published record on Librium is enormous. So large, in fact, we put it into a computer literature retrieval system to make it more accessible in answering your inquiries.*

It's a record that reveals a consistent pattern of patient response. A highly favorable benefits-to-risk ratio. And minimal interference with many primary medications.

Doing one thing well. Basically, that's what Librium is all about.

LIBRIUM® (IV)
chlordiazepoxide HCl/Roche
